Mike,
The process has evidently worked.

I shall look forward to many inspiring discussions on XMlog.
I have been using it for about a year and found it to have more
features than any other 'free ware' logging program.

I especially like the packet option and the CW keying feature.
I use the customer QSL label feature for all the contests.

What I would like to see is its ability to keep track of already sent
QSLs and multi QSOs per label.

Thanks for the program.

Joe/WA1WFH

3. VERSION 3.0

Yahoo group: XMLog
Date: 2000-03-24 10:19:34 UTC
From: ng6z@home.com
Topic: 3 Message: 3

Thanks for the quick update for the Chesterfileld islands (TX) and East Timor (4W). Downloaded and installed it this morning. Works great.

4. XMLog 3.00 - New features list

Yahoo group: XMLog
Date: 2000-03-24 20:13:58 UTC
From: Michael McAmis
Topic: 4 Message: 4

Hi - Just posted the official version of XMLog 3.00, here's a list of the changes:

*** 3.00 ***

- Added 4W/East Timor and TX/Chesterfield Is. to the prefixes list.

- XMLog can now (optionally) update your log to use prefixes that more closely match the ARRL DXCC prefix assignments. Most of the prefix changes in version
3.00 apply to former USSR countries.

Moved the ADIF DXCC country ID info from the file 'adifinfo.txt' to the prefixes file.

Both of these updates required changes to the format of the prefixes file. Although XMLog will still read old prefixes files anyone who maintains a custom file should consider updating it to use the new format.
See readme.txt for more info.

- Added a new menu item "DX/Show Callsign List" to the Log and Packet windows. This feature allows you to assign countries to specific callsigns that XMLog can't "guess" correctly.

- Add heading/distance to callbook lookup messages. For now only U.S. calls have the station location defined. This feature is currently only available for RAC Callbook, Inc. CD's.

- Added new commands for CW messages, #pause, #repeat and #file. For example you can create a repeating CQ with: CQ CQ de #me #me k #pause 3 #repeat
or if your CQ was in a file: #file c:\messages\cq.txt #pause 3 #repeat
See the help file section of CW Messages for more details.

- You can now double-click on RST fields in the log window to set the field to 59 or 599 (only works when the mode or frequency is set).

- Added rotor interface support for Yaesu SDX rotors and the HY-Gain DCU-1. Control-Click on a call or heading in the packet window to move
rotor.

- Added the Yaesu FT-840, FT-900, FT-747 and the Icom IC-746 to the list of supported rigs.

- Added new data mode, MT63.

- Added "Awards/IOTA Worked-Confirmed" summary to Log window.

- Bug fix: Internet addresses couldn't have port numbers greater than 32k.

- Bug fix: The scan of the QTH field to set the VE province wasn't working.

5. XMLog 3.00 - East Timor

Yahoo group: XMLog
Date: 2000-03-26 16:21:09 UTC
From: m.mcamis@valley.net
Topic: 5 Message: 5

Somehow an bad version of 3.00 was posted at www.xmlog.com - 4W appeared in the prefixes file for both East Timor and Yemen. The correct version was posted 3/26/00 1600Z.

To fix the problem you can download/install 3.00 again or edit the 'prefixes' file in your XMLog directory (usually c:\mlog). The line that reads:

7O,Republic of Yemen,AS,21,[13/-45],ADIF=492,
7O,4W,!,

should be:

7O,Republic of Yemen,AS,21,[13/-45],ADIF=492,
7O,!,

6. TX0DX

Yahoo group: XMLog
Date: 2000-03-27 19:10:51 UTC

Topic: 6 Message: 6

Mike,
You always seem to be able to help. I downloaded the 3.0 version
last night, and all appears to work OK, except for a format error
in callsign file. C:\MLOG\dxcalls.ini
TX0DX=0

How can I fix this one??

73 de NA5S

>
>Format error in callsign file C:\MLOG\dxcalls.ini
>TX0DX=0
>
```

I see what happened here - the callsign list is based on the ADIF index and TX doesn't have an ADIF index yet (so it was set to zero). When the list is loaded it complains about the 'bad' value. So for now you can just delete the entry from dxcalls.ini with an editor (like WordPad).

Since 3.0 knows about TX and 4W you don't need this entry anyhow.

I'll have a fix in the next version...

Mike

Mike,
Yeah, I saw that there also, and just deleted it before I got
` your email..... It's working fine now, with no error messages.
Thanks, and hopefully they will include it as a new DXCC entity.

9. Bearing/Distance/Country

Yahoo group: XMLog
Date: 2000-04-19 17:13:53 UTC
From: Tom Repstad
Topic: 9 Message: 9

I was wondering if there are any plans to add a display of bearing/distance/country when adding a qso? After the
callsign is typed in, it would be nice if that info were displayed on the screen. The current method of bringing up the country list and having to enter the call or prefix is awkward when trying to log a QSO real-time.

Topic: 12 Message: 12

I, too, would like to see that feature.

As an old Second Op user, I appreciated seeing worked/confirmed flags for the country upon entering the callsign. I am new to XMLog but didn't see where that capability is available.

From what I've done so far with the package, I am impressed with XMlog.

Hi Tom,

Sounded like a good idea so I've added the feature to the next
release. This release (4.00) is a '32-bit' version of XMLog and
should be available for some limited testing in a couple of weeks.

> How put new IOTA since AS145 or AF85 ?

Hi Didier,

The IOTA information is kept in the file iota.lst
This is a simple text file that can be updated with an editor like
NotePad or WordPad. Be sure to keep the list sorted and use the
right
format (AF-085, not AF85).

Send me an email with the new IOTA entries and I will include them in
the next XMLog release.

16. WPX ???

Yahoo group: XMLog
Date: 2000-04-23 12:11:52 UTC
From: Dennis Modigh
Topic: 16 Message: 16

Hello

Why don't you have support on XMLog for the WPX Award like other log programs have ?

I Also miss the support for 6m and SAT ! And why don't you have a map function that shows the Grid locators that is WKD on each band. Let's see what more to say... That map function i told you about can perhaps show what DXCC is worked ? You should learn and see on the very expensive program DX4WIN.

Sorry if im a little bit rude perhaps but this is function i really miss on XMLog ! Thanks anyway for a real good free program ! Keep up the good work.

20. CW Interface

Yahoo group: XMLog
Date: 2000-05-04 10:48:45 UTC
From: hyrgrnd@color-country.net
Topic: 20 Message: 20

Maybe someone can help me with this problem.

I have tried to make the interface described in the help section to key my Kenwood TS-570 from the computer. Nothing happens.

I then attempted to verify that the signal was even getting to the serial port by using a VOM to see the voltage across pins 4 and 5 change - I assume that it should, 4 being DTR and 5 being ground. I can detect nothing there either.

I can hear the cw being sent in the computer speaker.

Can anyone shed some light on this situation for me?

Thanks

Steve - N7IF

From: John P Smith
Topic: 21 Message: 21

Hi Steve,
Let's see...make sure you have selected the correct port for cw under the options menu...that's the only thing I can think of. Once you do that your VOM, set to monitor ohms, should be able to detect some activity on pins 4 and 5...won't be any voltage change, but should be a resistance change from open to closed.

22. XMLog 4.00

Yahoo group: XMLog
Date: 2000-05-25 23:00:50 UTC
From: m.mcamis@valley.net
Topic: 22 Message: 22

A pre-release of XMLog 4.00 is available for testing. This is a "32-bit" version that will not run on Windows version 3.

There's a nice collection of new features but unfortunately the first thing you may notice is that the .zip file is much bigger - 5mb. This
may make downloading a pain for people with slow/unreliable Internet connections.

If you are interested in trying this version it is available at www.xmlog.com/beta This page also includes a description of the new features.

If you decide to try it out, follow the suggestions on the beta page on backing up your current files before installing 4.0. Also, please let me know how things work out - good or bad.

The new installer seems to be a bit picker about running after other applications have been run so it's probably best to do the install after a reboot.

Mike - W1ECT

27. v 4.0 beta 5 - critical qso report

Yahoo group: XMLog
Date: 2000-06-06 11:59:48 UTC
From: Joseph Agius
Topic: 27 Message: 27

the count on the DXCC critical QSO list report is off.
The range in the top band of the window indicates a span of records displayed to be 42 which it actually is not.
It is counting the blank lines between each prefix break as well.

This throws all of the numbers off.

Joe

Hi Joe,

Have had a few more people try landscape mode without problems so
it probably won't be any easy fix - perhaps I'll need a new "Print
Setup" interface. For now you should be able to set landscape
mode through your Printers settings in Windows.

Yes, It turns out that the "Display" form is pretty dumb, it doesn't
know anything about the data being displayed - it just counts
the lines. I took a look and it's more that just a quick fix so
I'll add this to the 'todo' list.

32. Re: CW Interface

Yahoo group: XMLog
Date: 2000-06-13 22:36:53 UTC
From: ka2x@arrl.net
Topic: 20 Message: 32

Steve,
I have a TS570 & just connected the CW keying circuit between my PC printer port and my straight key.
I used a DB25 male plug with the transistor & resistor circuit tucked into the plug's hood. The circuit schematic is in the CW Setup section of the XMLOG Help doc. I do not have a printer & do not use the printer port for anything else. I set the TX port in XMLOG CW Setup to LPT1.
Before I hooked up the keying circuit to the straight key:
- I measured across the output wires and noted ~5VDC during PC boot-up and .3 to .4VDC after boot-up. Continuity checks, while keying from the XMLOG program, verified an open/closed circuit with key-up/key-down conditions, respectively.
(I also checked voltage & continuity across my straight key, before I hooked up the keying circuit, and noted the same voltage levels & continuity checks.)
After I hooked up to the straight key & turned on the TS570, everything worked.
I hope this information helps you to isolate your problem.
73,
Tom - KA2X

Topic: 34 Message: 34

During ADIF file import/export, Most contesting programs use the QSL_sent and QSL_rcvd datafields during their import/export programs.
Mlog uses QSLSDATE and QSLRDATE which gives more appropriate information.

When importing these contestfiles into Mlog, the QSL fields are obviously not filled in.

CAn there be some cheange to the logic of Mlog to the effect:

For exporting:

If QSLSDATE != " " then QSL_sent=1 else QSL_sent = " ";

Also:

If QSLRDATE != " " then QSL_rcvd = 1 else QSL_rcvd = " ";

For importing:

If QSL_sent = 1 then QSLSDATE = [today's date or QSO date or whatever date] else QSLDATE = " ";

and

If QSL_rcvd = 1 then QSLRDATE = [today's date or QSO date or whatever date] else QSLDATE = " ";

These fields would then be included in the ADIF file logic that Mlog writes and reads. There are many optional fields for the ADIF format but these seem to be popular.

I am not sure how complicating this logic would be or whether the info is available.
I think that it would make it more compatible with other programs.

Right now I have to do it manually or edit the adif file each time I import.

Hello. This is my first message on this list. My name is David, and my callsign is AE4LH. I live in Danville, VA., USA. I have been using Hyperlog for a while, and now I'd like to try using XMLog.

I have downloaded the 4.00 Beta 10 version. I installed it on my computer. It all seemed to work fine.

I now have QBasic on my computer. I have saved the data from Hyperlog into a file called REPORT.TXT. How do I import this into IMPORT6.BAS and then run/compile/etc? I have never used Qbasic.

With Hyperlog I have my Kenwood TM-2550A connected to COM1 at 9600 Baud. This seems to be working ok. I have a packet window opened. Spots are coming in. I don't hear any bell, but I see them arriving. Can this program QSY the rig?

My HF radio is a Kenwood TS-440S. I have this connected to COM2 with a 4800 Baud. This does not work with XMLog. I thought I set it up properly. Here are my settings: Kenwood, COM2, 4800 Baud, Parity None, Data 8-bit, Stop Bits 1. With these settings (that I took from the Hyperlog program) nothing appears on the XMLog main screen.

I hope someone will be able to help me get setup.

Does anyone have any settings for colors that they prefer to other combinations?

Many thanks. vy 73 de David AE4LH

Dave,

If you want to import your report.txt file, you have to make sure that it is in the same format as the mlog.txt file and
import it that way. Or you can code it so that it is like the ct.res file and impoort it taht way.
It would be much easier if your old program can generte an adif file.

Secondly, what are you trying to di with the interface? Just key the transmitter or rig control?

Dear Joe,
Thank you for replying to my questions. I used the directions in IMPORT6.BAS to create REPORT.TXT from Hyperlog. I am unable to import this using the Import feature on XMLog.
I think I need to run the IMPORT6.BAS file, but I do not know how to do that. I have never used Quick Basic before.
I would like to see the readouts from my TS-440S on the XMLog screen. I would also like to QSY to freqs that are posted on the PacketCluster. I wonder if XMLog is able to do this.

OK Dave, Sounds like you got your data from HyperLog. Glad you could
get the QBasic converter to work - sometimes DOS can still be useful.

There are a couple of ways to set your rig frequency from the packet window, the simplest way is to double click on a displayed frequency. You can also do a right click on a frequency. Check "Help/Shortcut Guide". In the log window you can double click on the frequency or mode fields to set them from your rig. Also check the "Help/Display Help" sections "Adding New Entries" (to see how to automatically get the freq/mode from your rig for new log entries).

XMLog does not have a display that simulates a rig control panel.

Hi - I did some surfing on the web and it seems that
Nansemond-Suffolk
is often used to describe this county. I don't know if this is the
official name but I'll do some more checking. For now you can keep
using Nansemond or edit the counties.lst file. If you make changes
to
this file remember that it will get replaced when installing new
xmlog versions.

It seems that the city of Nansemond merged with the city of Suffolk
and at that point Nansemond county ceased to exist. So, no new
county
was created and no Suffolk county exists. I will remove it from the
list. Here's a nice link for Virgina county information:

http://www.institute.virginia.edu/vaco/

Hi Randy,

I'll check and see what's required. Here's a couple of my favorite
free QSL manager resources.

This web page has very reliable info on past, present and scheduled
DXpeditions. Times, ops, managers, etc.

http://www.cpcug.org/user/wfeidt/Misc/adxo.html

Also try this e-mail QSL manager server:
1) Start a new e-mail message
2) Set the subject to: qsl info request
3) Set the destination to: qsl-info@... (QSL Info Server)
4) Include the callsigns in the text, one call per line.
5) Send the message and you'll get a response in a few minutes.

Don't abuse this server by dumping hundreds of calls in a message!

Can't argue with that one. This is on the ISP for the Magnolia DX Assoc
and is maintained by one of our members, Ray, WQ5L. One point,
qsl-info@... will still work, however, Ametro no longer is
associated with this provider. It has returned to Datasync, Inc. The
correct address is qsl-info@....

Thanks for your help

From: Jonni Brockmoeller
Topic: 47 Message: 47

Hallo Mike,

As you know I am a satisfied European user of XMLog .

Until now, I didn't missing any features for my area, but many new digimodes (multitone modes) are coming on band, next is MFSK, Throb etc.

Is it possible to unlock the mode field in your program ? Or make a definable field by users to insert new modes ?

Temporary I use DATA for new modes, put under NOTES field the correct one, and add this if I print my qsl cards.

Maybe you have a better solution ?

Hi Jonni,

There is a secret XMLog feature I added just for you when you asked for the last mode updates!

Here's how it works - Edit your mlog.ini file (save a copy first!) and add lines in this format:

MODE=modename,modetype

Where modetype is 2 for Phone, 3 for CW, and 4 for Data.

No warranty is expressed or implied...

Mike

Hello Ivanildo,

XMLog 4.00 gets the "System Time" (UTC) from Windows. This offset
between UTC and local time is set by selecting the Windows "Start"
button and picking "Settings/Control Panel". Double-click on the
"Date/Time" icon and then select the "Time Zone" tab. This should
let
you select the correct offset.

Hi Cliff,

There is an undocumented XMLog feature that lets you add your own
modes.

Here's how it works - Edit your mlog.ini file (save a copy first!)
and add lines in this format:

MODE=modename,modetype

Where modetype is 2 for Phone, 3 for CW, and 4 for Data.

What modes will you be adding?

Mike

59. Adding new modes, part II

Yahoo group: XMLog
Date: 2000-09-22 17:17:36 UTC
From: Keith Diehl
Topic: 59 Message: 59

Here's another question regarding modes. I have a computer interface to my FT1000 and have chosen to have the MODE field filled in with info from the rig. I believe the rig reports a numeric value that XMLOG translates to PACKET. Can I search the XMLOG executable for PACKET and replace it with PSK31<space>? (Yeah, I know, I'm getting really lazy with my logging now!)

Hi Mike,
thanks
just started with mfsk16, impressed with its weak signal capabilities
especially with polar doppler fade and distortion. It has effective fec and
is even better that psk31 on polar routes.
I've worked europeans here in the Pacific NW and couldn't even hear the
signal in the speaker.
adding mfsk16 mfsk8 psk63f psk125f

Well, I wouldn't recommend hacking a string in an exe file to one
that's longer than the original! Likely to blow up in some way.

Have you checked out the "Edit/Use (or Edit) Defaults for New
Entries"
feature? You can set up some defaults with "Edit/Edit Defaults..."
which include PSK31 for the mode field and then toggle these defaults
on and off with "Edit/Use Defaults...".

Mike,
mode add in .ini file works great, thanks.
I keep playing with logger but always come back to xmlog, has such a power search capability and I love the qsl label section.
What is the field delimiter character that separates fields used in ADIF files? I've forgotten and can't find info anywhere, even tracked down the adif web page, no help.

64. Question about XMLog QSL printing

Yahoo group: XMLog
Date: 2000-09-23 19:47:25 UTC
From: Casey
Topic: 64 Message: 64

Hi,

I'm new to XMLog, just now starting to read the documentation, but I have one quick question. I noticed in the description that it has some custom QSL label printing capability. I'm wondering just how flexible it is.

What I want to do is to print on one side of some custom QSL cards. I have my own card design that is 3 to a regular 8.5 X 11 in sheet of card stock. Is the label printing facility capable of a layout that would let me match to the fields on my custom card?

Barring that, does XMLog have the ability to customize an export of the QSL fields to a plain text file with my own delimiters? I do have another program that would allow the customized printing, however, it takes a special format for the input file and if XMLog would allow me to specify that format (just comma-delimited, except for the very first line) I might be able to print the cards directly from the DB.

Not sure what you're after - you can check the ADIF specs at:

http://hosenose.com/adif/adif.html

and you can also just peruse an adif file with any text editor (e.g. Wordpad) since it's just a simple text file.

Topic: 64 Message: 66

The custom layout features are very flexible. Try Options/QSL Label Layout, click on the Custom button, pick Demo QSL Card, click the Modify button, and then click the Preview button. Also try Demo QSL, Info Only.

The label info is written to the file labels.inf, the format is not customizable but it's a plain text file which you could reformat.

67. Problem w XMlog 4.00 and Win 98

Yahoo group: XMLog
Date: 2000-09-26 20:08:48 UTC
From: stefan@shdk.se
Topic: 67 Message: 67

Hi,

I found XMlog and believe it's a great piece of software, seems to cover my needs, simple to use etc etc. But, I just can't get it running.

I downloaded the latest XMlog 4.00 (build 08/26/00) from www.xmlog.com and ran the setup according to instructions in the readme. But when I try to log a QSO I get the error message "Run-time error '9': Subscript out of range". It happens when I type the first letter in the callsign field. I have tried to leave the software in default, i.e. not change any parameters at all, as well as changing the parameters to my needs but in both cases it always ends with the above error message.

The problem is easy to reproduce for me:

- Start XMLog
- Open a log file
- Press CTRL-A to add a new QSO
- TAB two times to move to callsign field.
- Any character I type will result in the above error message and the program will exit.

I am running a swedish Win 98.

Any help is appreciated. If you need to know the version of any particular DLL or any other info about my setup, just send me an email and I will check it out.

Thanks,
73 de SM0RGM / Stefan

Hi Stefan,

Does this problem only happen for the Callsign field? XMLog tries to show the country & bearing for the call being entered (in the caption for the window). Perhaps this code is having some kind of problem? Since this doesn't seem to happen elsewhere I'll probably need to send
you a debug version of mlog.exe that will allow us to narrow down the bug.

71. submission tracking

Yahoo group: XMLog
Date: 2000-10-04 13:36:25 UTC
From: Joseph Agius
Topic: 71 Message: 71

Mike;
I have the following suggestions for enhancements , if it is not a major restructure:

1. Is it possible to list ALL states in the "submission tracking" report under awards.
That way, any state for which you so not have a confirmation will be obvious - they will be blank but they will be there.

I know that you can use the check list but since there is no link to immediately go tho the
entry, the process could be streamlined, if you knew the call needed from the submission tracking report.

Or, perhaps, you can make a link from the "wrk" of the WAS checklist to the needed entry.
This may be even better. It could be designed the same way as the "list all entries for this call" report.

2. The same idea would apply to the DXCC check list, a link to needed entries would be useful.

Hi Bob,

I have had people use the Paragon sucessfully. Have you had any luck using other software to control your radio? If so we can eliminate bad comm ports, cables, etc. If you've installed XMLog version 4.00 I've built in some debug features that can help solve this kind of problem. (By the way as a bit of trivia, Ten-Tec made it easy on us programmers by copying the rig-control protocol used by Icom).

From: m.mcamis@valley.net
Topic: 75 Message: 76

Hi Scott,

XMLog has a file (named prefixes) that contains data similar to that contained in the cty.dat file. This file is kept up to date in the current XMLog versions but it is possible to edit it yourself to make changes when you don't want to go to the trouble of a download/install. Take a look in the help file for a desciption of the prefixes file (there's also some doc at the start of the file itself).

The only change that currently needs to be made is adding ADIF indexes for Chesterfield Is. and East Timor - as far as I know the ARRL still hasn't assigned them yet.

Ed,
probably not.
I just enter the unique items i want into the notes field and use the power search capabilities later to extract, can even put into qsl label, power qsl label creation. wywiwyg -- what you want is what you get.
the software engineer, Mike W1ECT, has not added any new fields to the program in 2 years. It's a stable platform now with several powerful features, better than can be said for a number of other shareware logging programs out there. I run it on three machines, never locks up, lose or corrupt the data files, and has a great help file.
wouldn't it be great if the creators of these shareware programs supplied us with the source code for personal modifications.

Topic: 77 Message: 80

Hi Eddie,

I don't have any plans to add these fields in the near future. Here's one strategy you can use to make this data a bit more accessable though. Include the info within the Notes field as SAT_NAME: xxx and SAT_MODE: xxx . Then you can still filter your log searches by giving search keys for the Notes field like:

=*SAT_MODE:* to get all sat qso's
=*SAT_MODE: CW* sat/cw
=*SAT_MODE:CW*SAT_NAME: Oscar 99* oscar99/cw, etc

If you use the ADIF names I'll make a note to automatically move the data from the Notes fields whenever I add the fields to the log window.

81. Problems with CT9.49/B2R9 imports

Yahoo group: XMLog
Date: 2000-12-06 00:00:48 UTC
From: m.mcamis@valley.net
Topic: 81 Message: 81

WA3WSJ has reported a problem importing a .RES file created from a CT version 9.49 log. Running B2R9 resulted in a .RES file that had different column alignments (and the frequencies in the file included an additional digit). This meant that when the .RES file was imported the frequencies weren't interpreted properly.

The next step is to see if using C2A to convert the CT log to an ADIF file works ok... I'll keep you up to date.

Hi Irv,

Adding modes directly to the ini file affects the values allowed in the "Mode" field. Normally this is used to add new data modes that aren't built in to XMLog. The next version will allow you to set these values from a menu item in the log window (any new modes you've defined will be retained).

Hi Irv, nice trick. The only down side I can see is that wildcards won't work quite right. For example searching for W0 through W3 calls: =W[0-3]* This is because that special character isn't stored with the ascii value for a zero.

88. Re: [XMLog] Re: file import

Yahoo group: XMLog
Date: 2000-12-19 15:37:52 UTC
From: jagius@sybase.com
Topic: 88 Message: 88

While importing files into Mlog using an ADIF file generated by another program, the QTH field is not filled in when the entity is a US state. Thus, when a display (report) is done, the state does not show up on the report.
This information is usually taken from the contest exchange which includes the state or the section for local contests.
Canadian provinces seem to be filled in OK.

This situation does not occur while importing a RES file created by CT, however CT messes up the date and some manipulation has to be done before importing but it is a workaround. It seems that the program logic is different in these instances. I have a request for a fix there too.

I noted that this behaviour is present in both Mlog3 and Mlog4.

Mike, is it possible to include some kind of a county report that shows the call, city , call, and other pertinent contact info?
The ideal would be state, county, city or location, mode, band, notes.
The existing county report, although helpful, shows only the first contact but nothing else.
Most awards require the other information and it is not easy to get without going through the file call by call.

Topic: 88 Message: 89

Hi Joe,

I'll take a look at the ADIF import problem during the holidays...
Another ham has had problems using B2R9 with the current version of CT
so he was going to try C2A instead - didn't hear any results though.
The .res file had a different column alignment and had an extra 0 on
the frequency columns.

I'll put the county report on the todo list but it's not likely to
happen soon. This is the kind of thing you can do from Excel if
you've had any experience there. Since the logs are Access databases
Excel can reference them directly. Of course if you're paranoid like
myself you'd make a copy of the log first and hack on that temp copy
with Excel till you were satisfied your report was not only producing
the desired results, but wasn't modifying the file.

Ok, thanks Mike.
C2A works all right. The only problem here is that mlog does not import the contest data from an adif file while it does from a res file. That's why I favor the res file.

B2R9 has recently been fixed to correct the date problem. The only thing remaining is your importing the data into the QTH field for the US states. It would be great if that were done from both the adif format and the res format.

I will play around with excel and access. I did not know the format you used. Now that I know, it should be a breeze to generate many reports I have been longing for.

Happy Holidays

Subject: [XMLog] Re: file import

Hi Joe,

I'll take a look at the ADIF import problem during the holidays... Another ham has had problems using B2R9 with the current version of CT so he was going to try C2A instead - didn't hear any results though. The .res file had a different column alignment and had an extra 0 on the frequency columns.

I'll put the county report on the todo list but it's not likely to happen soon. This is the kind of thing you can do from Excel if you've had any experience there. Since the logs are Access databases Excel can reference them directly. Of course if you're paranoid like myself you'd make a copy of the log first and hack on that temp copy with Excel till you were satisfied your report was not only producing the desired results, but wasn't modifying the file.

91. Missing DLL - XMlog400 download

Yahoo group: XMLog
Date: 2000-12-22 13:42:47 UTC
From: k4otv@mindspring.com
Topic: 91 Message: 91

I downloaded version 4.00 today. When I tried to unzip it I got error message stating that it was linked to some "export" DLL - I neglected to write down the missing DLL filename.

I am running a fairly old version of Windows 95. Can you help me with the filename of the missing DLL file and tell me where I can get the file?

And hopefully, how to install it so I can unzip and install xmlog?

Am I going to have to download the xmlog file again?

I want to get the log running so I can exchange logs with my friend W4RS/DU3 in Philippines so I can serve as his QSL manager.
Thanks in advance.

Charlie, K4OTV

92. xmlog400 Download problem - more info

Yahoo group: XMLog

From: k4otv@mindspring.com
Topic: 92 Message: 92

Mike:

Some new/additional information regarding my xmlog400 download/unzip problem:

The problem seems to be that my Netscape Browser recognizes that I recently installed Netzip Classic. Netzip also does not work because the file comctl32.dll is missing. So apparently the error message that I received was from Netzip. I haven't found where to get the needed DLL file yet.

I tried unzipping the file with PKUNZIP, but it can't "see" the xmlog400 file - I get a "file not found" error when I try PKUNZIP

- any ideas??

Thanks

Mike:

Never mind - I found the .DLL file that I needed on the Internet and installed it - my Netzip works NOW and i got xmlog installed.

Will have to thrash around with it a bit and see how I do. Will let you know.

94. Log Windows V 2.0 Import?

Yahoo group: XMLog
Date: 2000-12-22 17:35:26 UTC
From: k4otv@mindspring.com
Topic: 94 Message: 94

Any ideas on importing Log Windows V 2.0 files into xmlog?

The logs are normally stored as ".dat", but I can also export ASCII
and dBase.

Anybody have any experience in converting Log Windows V2.0 files?

Thanks!

Charlie, K4OTV

95. Digipan DDE Interface

Yahoo group: XMLog
Date: 2000-12-27 19:26:40 UTC
From: Thomas M. Schaefer
Topic: 95 Message: 95

Digipan has a DDE interface to get the current selected callsign. The item changes whenever the Digipan user clicks on a callsign, would it be possible to add DDE support to XMLog so when a user clicked on a call in Digipan, it could populate the # variables in XMLog like #HIM, etc. This would integrate the two programs nicely.

From: Jim Allen WB1Z
Topic: 106 Message: 106

Mike et al,

Was wondering if there is a way to enable voice alerts on the packet cluster when someone connects to me in TALK mode (maybe CHAT in some other clusters).

Thanks for the help and as always for the great support for your software.

Jim

107. Re: Voice alerts

Yahoo group: XMLog
Date: 2001-02-03 16:12:00 UTC
From: m.mcamis@valley.net
Topic: 106 Message: 107

There is a problem with giving alerts for single line talk messages since the form of the message "call de xxx: text..." isn't very unique. I found that bulletin board prompts (among other things) would send lines like this and give bogus alerts. The latest version does recognize multi-line/chat mode though and gives an alert. The mail/chat alerts are CW only, I'll see about adding voice versions.

There is now a beta version 4.04 of XMLog available at
www.xmlog.com/beta

I'd like to see some current version 4 users try it out and give me
some feedback.

Packet features include:
An experimental graphical PacketCluster spot display.
TenTec Omni-VI support fixed.

Log features include:
ADIF improvements.
A menu item for defining custom modes.
An option to always show the address fields.
Font selection for main log window.
A new interface routine from the Radio Amateur Callbook folk
fixes the "65532" error that sometimes occured when looking
up unknown calls.

110. Basic Help

Yahoo group: XMLog
Date: 2001-02-04 19:23:36 UTC
From: ldavid@btinternet.com
Topic: 110 Message: 110

Can some kind hacker please help me to work Mike's Basic "import.bas"
program. I have GWBasic and a version of QBasic and VB6 here but not
much of an idea how to use any of them.
I guess the programs should run on any version of QBasic and suppose
I should substitute my log text file and path for "input" in the
program code and substitute the path to a new text file for "output".
Is this correct?
I may be doing something wrong with parentheses or double quotes but
nothing I have tried works yet.
Any advice or working example would be very welcome.
David Lloyd, G0NTT.

114. Beta 4.04 Install problems

Yahoo group: XMLog
Date: 2001-02-15 13:56:35 UTC
From: m.mcamis@valley.net
Topic: 114 Message: 114

I've taken the Beta 4.04 off line because of a reported install problem. If the install was sucessful there's no reason for concern but on some systems there were file conflicts reported and the install process would terminate.

I'll have an updated beta version available soon.

Mike - W1ECT

115. Internet DX Clusters

Yahoo group: XMLog
Date: 2001-02-15 14:52:07 UTC
From: Kevin Nathan
Topic: 115 Message: 115

Hi All,

Can anyone on the list suggest a good dx cluster accessible through the internet which I can log into for spots? I live in Boise, Idaho so would prefer something in this part of the country although I'm not too picky. Do I need to do anything else to xmlog besides set the port for internet and give the address?

Thanks very much and 73.

Hi Kevin,
Try KC0DJO at IP address 209.32.226.63.
They are in Duluth MN which is about as close to you as any of the
Telnet clusters that I'm aware of.

Hi John,

I will definitely give them a try. If you don't mind, I want to ask a question about something strange that is happening at home. I was playing with DX Telnet for a while and had checked in a few times to the KA7R cluster in Portland/Vancouver. In fact I logged onto it last night using DXtelnet. However, when I try that same address with xmlog, it just says disconnected from the address which is 24.6.217.21. Any idea why this is occurring? I tried with telnet itself to that same address and can't connect either.

Thanks and I look forward to hearing back from you on this one. 73

Hi All,

Got it figured out thanks to Dianna and Cliff. Dianna, the 7300 was the key for my connect via telnet so should work tonight when I get home in xmlog. Cliff sent me the exact parameters to copy into my own >nod file.

I do have one last question though. Can I leave the packet window open in the background while logging in the log window to keep receiving dx announcements? Again, thanks so much to all and 73.

From: Kevin Nathan
Topic: 125 Message: 125

Hello All,

I really need your help. Up until now, when I brought up the log fields, there have been fields for name, qth, notes and so on along with the normal ones for time, date, call and the like. At the bottom there were a couple of boxes one to check for awards info and another for address info. Now, for some reason, the show address info box has disappeared and so have my fields for name, qth and notes. They have been replaced with four or five address fields.

Can someone please tell me what I need to do to get it back the way I want it so all the names and so on I entered in my log will come back? I will be so grateful if you can help me get it back.

Thanks much in advance for your help.

131. Beta 4.11 Available

Yahoo group: XMLog
Date: 2001-04-06 22:25:14 UTC
From: m.mcamis@valley.net
Topic: 131 Message: 131

A beta version of XMLog, 4.11, is available at www.xmlog.com/beta

Lots of minor changes including improvements to the new PacketCluster Spot Display. There have been lots of internal changes as part of "modernizing" the code (some of this legacy code dates back to the DOS version), so let me know if you find any glitches...

Coming soon - The next version will support multi-QSO QSL card labels.

Stay tuned - Mike, W1ECT

Mike
Greetings - all went well with the upgrade - all the features (except packet related) work fine.
I've imported 85 qsls from mmtty, following my limited efforts in the weekend contest.
No problems and the adi fields all behaved ok.
Thanks for the enhancements, very 'smooth' programme, nearly intuitive (hi), excellent GUI.

Regards

Barrie

135. Packet message #cr ignored in split screen mode

Yahoo group: XMLog
Date: 2001-04-22 08:10:20 UTC
From: ka2x@arrl.net
Topic: 135 Message: 135

I just updated from 2.16 to (32 bit) 4.00 and all is working nicely
except for one difference.
In 4.00, with split screen on, when I send canned packet messages
(Shift+ Fkey) that ends in a #cr (or #^m) the text loads into the
bottom screen but the cr / ^m does not trigger a carriage return to
my TNC to initiate a transmit of the message text. In 2.16 the cr
was recognizd and did trigger the TNC to transmit.
I found two workarounds: either manually hit the Return key to insert
the cr or turn split screen off.
Has anyone else experienced this and can you offer a fix?
Thanks,
Tom - KA2X

136. Beta 4.13 Available

Yahoo group: XMLog
Date: 2001-04-24 15:48:41 UTC
From: m.mcamis@valley.net
Topic: 136 Message: 136

Version 4.13 of XMLog is now available at www.xmlog.com/beta

This version includes fixes for two recently reported bugs:

- Any #cr as a part of a user-defined packet message was being ignored in split screen mode.

- Setting the "Use Callbook for Locations" option when using a QRZ or Buckmaster CD could result in XMLog getting stalled when entering a callsign into a log entry.

Version 4.13 also includes support for the two "most-requested" new features:

- A right-click on the callsign field will show a popup menu that includes QSO info for the last 10 QSO's with that station. Many other fields also support right-clicks to set their values.

- Support for multi-QSO QSL card labels. Check the new demo layouts "Demo QSL-5" (for large labels) and "Demo QSL-4" (for small labels like Avery 5160/8160).

Mike - W1ECT

137. Display format of dates

Yahoo group: XMLog
Date: 2001-04-28 14:04:04 UTC
From: wb4mle@mindspring.com
Topic: 137 Message: 137

Have several logging programs in use at the same time- "playing with
toys". I find the date format of dd mmm yy or dd mmm yyyy much less
confusing than trying to switch mentally between mm/dd/yy and
dd/mm/yy. Is there any way to have XMlog use the dd mmm yyyy display?
Thanks!

Hi Dan - Haven't ever used AOL so I hope some other folk out there
may know what's going on. Did you get the xmlog.zip file downloaded
to your system OK? When you say "open it from desktop" is this the
.zip file or have you successfully unzipped the .zip file and
run the XMLog setup? Not sure why AOL would be wanting to get
involved on the unzip or the install...

Yahoo group: XMLog
Date: 2001-04-30 15:52:34 UTC
From: m.mcamis@valley.net
Topic: 139 Message: 141

Hi Michael,

The sorting can be affected using the Display/Sort By menu item.
Setting this option affects subsequenct Select/Searches, not the
currently selected log entries.

There's no fine-tuning for the columns shown in the Display/Short,
Medium, Long. Many folk have just created custom reports using
Microsoft Excel or other report writers - XMLog log files are in
MicroSoft Access format so they can be manipulated from Excel, etc.
To be safe it's best to make a backup of your log before you start
debugging any external reports.

142. Beta 4.14 available

Yahoo group: XMLog
Date: 2001-05-03 14:34:24 UTC
From: m.mcamis@valley.net
Topic: 142 Message: 142

Beta version 4.14 of XMLog is now available at:

www.xmlog.com/beta

This version has a couple of fixes for custom mailing/qsl labels.
I'll make this version available on the main if there are no
significant problems reported.

Do any of you have a set of .wav files you've recorded for your
PacketCluster spots? Or perhaps you've created some custom
reports using an Excel .xls file? If you'd like to make these files
available to others you can send them to me as e-mail attachments at
m.mcamis@... and I can post them on the XMLog web page.

Yes, there is a minimum (just to keep the code from blowing up). I could bring it down some if you think it would be useful - say by half? By the way the minimum size depends on how may bands you're displaying.

147. Re: Selectable columns in Sort?

Yahoo group: XMLog
Date: 2001-05-09 23:26:10 UTC
From: Michael Shaw
Topic: 139 Message: 147

Michael:

I opened my log in Access and generated a QSL log with only the
columns I wanted by "hiding" columns, as Access wouldn't let
me "edit" the XMLog. The log has been posted to:
http://freepages.hobbies.rootsweb.com/~shawpage/XMLog1.htm

Thanks for your help!

148. Spot WIndow Question

Yahoo group: XMLog
Date: 2001-05-12 01:18:38 UTC
From: Tom Schaefer
Topic: 148 Message: 148

Any chance to start a new log entry by clicking somewhere on the spot. I know I can set the rig, but the scenario is that I double-click on the spot window entry to set the rig, then when I work him, I want to use the spot window to start the log entry.

Also, if I start a log entry by clicking on a spot, but I do not actually make any changes, would it be possible that if I start another log entry (ie, I did not work the one I just started), it could start the new log entry without asking?

Thanks for a great program...

Tom NY4I

149. Feature - Auto-tune

Yahoo group: XMLog
Date: 2001-05-12 23:33:10 UTC
From: Tom Schaefer
Topic: 149 Message: 149

I know I keep sending feature things in, but I figured if there is a list...why not.

How about a feature for auto-tuning a spot (like the new Kenwood TS2000 has). If you select an option, the spots for bands that you have not excluded (basically a spot that would be announced) is automatically tuned on the radio.

It would be good if you are just monitoring.

If the spots come in rapidly, a timer could be used so you always wait maybe 10 seconds before tuning the next spot. If another has come in in that 10 seconds, always go to the last one.

150. DLL for QRZ lookups

Yahoo group: XMLog
Date: 2001-05-12 23:35:14 UTC
From: Tom Schaefer
Topic: 150 Message: 150

Michael,

Would you be interested in a DLL I have to send a callsign to QRZ and get information back about it. It sends back all the information and the QSL manager if DX. It is a C++ DLL and can be called from VB. I would supply a VB test program. I figure this would be good for those connected to the internet to have another callbook option (Internet).

Let me know if you are interested and it is yours to use in XMLog gratis.

Tom NY4I

From: m.mcamis@valley.net
Topic: 148 Message: 151

For the next version (4.15) I've added a right-click popup for the spots display window. This popup allows you to do a callbook lookup, start a new log entry, set your rig freq/mode, or set your rotor.

155. XMLog 4.15 available

Yahoo group: XMLog
Date: 2001-05-23 14:03:01 UTC
From: m.mcamis@valley.net
Topic: 155 Message: 155

XMLog version 4.15 is available as a beta test version at:

www.xmlog.com/beta

Here's what's new...

- Added right-click support for the packet spots window allowing you to set the rig frequency, do callbook lookups, start a log entry, and set the rotor position.

- Bug Fix: Couldn't define new bandsets for the packet spots window.

- Bug Fix: Fixed the problem that caused a "Can't assign spot site" message when displaying long callsigns in the packet spot window.

- Bug Fix: Fixed the problem that caused random ghostly outlines when printing QSL labels.

Mike - W1ECT

156. Thanks for the feature

Yahoo group: XMLog
Date: 2001-05-24 22:23:35 UTC
From: Tom Schaefer
Topic: 156 Message: 156

Michael,

I have been using the new feature to allow clicking on the call and starting a log entry from the SPOT window. I have especially like the feature where it will take the frequency from the Spot (if you are not interfaced -too). One thought, I had a problem with my interface so it could not get the freq/mode from the rig. but it did from the spot. It however, did not get the mode from the spot. That would make it complete.

Also, has anyone ever mentioned QSX information from a spot to set up the righ VFOs? I know that is a big pain, but I was curious if it is supported on any rigs.

Thanks again...This is one HELL of a program at any price!

73,

Tom NY4I

157. My only wish....

Yahoo group: XMLog
Date: 2001-05-27 16:47:59 UTC
From: kdiehl@xmission.com
Topic: 157 Message: 157

I think XMLog is great and truely appreciate the author's work. I use it for all of my logging and QSL printing.

The only thing I would wish for is a modification to the call search so that everything after a / is ignored. Right clicking in the call sign box would, for example, return wa7cc, wa7cc/7, wa7cc/portable UT, etc.

Now I suppose this would still cause problems with calls like ve3/wa7cc. Perhaps there would be an even better way. A special "ignore after" charactor like wa7cc\7 ?

Does anyone else wish for such a feature?

Thanks again.

Yahoo group: XMLog
Date: 2001-06-10 19:05:11 UTC
From: kdiehl@xmission.com
Topic: 157 Message: 160

I just downloaded the beta of 4.16 and tried the new lookup function with a "/" in the call. What I found was that the slash must be followed by a number, wa7cc/7, for the callbook lookup to work. Something like wa7cc/portable UT confuses it.

I also found the right click DISPLAY ALL ENTRIES does exact callsign matches, including the / information. I wish that it would return all contacts with a station, regardless of / mobile, portable, or fixed.

Any chance of a 4.17 ????

I feel guilty using a XMLog for free. It's just too nice a program! Would you accept donations from happy users? (I'm happy in spite of my complaining <smile>)

Thanks

164. XMlog with IC-756(not PRO)

Yahoo group: XMLog
Date: 2001-06-14 12:37:00 UTC
From: Richard
Topic: 164 Message: 164

Hi

Can you use the Icom IC-756 with XMlog so that it will enter the frequency and mode automatically??

Is there any information web pages where I can get information about making a cable to go from the rig to PC??

Is an interface needed i.e a small circuit or is it just a simple cable??

Thanks

Richard, 2E0AVF

Topic: 164 Message: 166

Hi Richard,

XMLog does support the IC-756. Like Yaesu and Kenwood, Icom sells a 'level converter' and cables but is expensive. You can buy equivalent converters from: http://www.hosenose.com/w1gee.htm and I'm sure there must be other sources.

Some newer rigs can interface directly with computer COM ports and only require the appropriate cables. I don't know if the 756 is in this catagory - check your manual.

Once you get set up the interface will be good for any logger, etc. not just XMLog.

Version 4.16

With the counter at the top of the window gone,it is not possible to know
th number of counties one has worked/confirmed.
Version 3 used to have the counter for all reports. Now it is gone. - even
though it was only a line count it could be used for this purpose.
The summary report also does not include counties.

Version 4.16

There was mention of multi qso qsl labels. I can't find it anywhere on the
web site.

Topic: 170 Message: 171

Hi Joe,

I took the counter out of the report window because it was pointed out that it was misleading since it was displaying the line number in the report which could include blank lines, headings, etc. I'll look into restoring this feature and have it only count appropriate lines.

To see an example of a multi-qso label choose Options/QSL Labels Layout, select the Custom button, pick Demo QSL-4 Small from the list, select the Modify button, and finally, select the Preview button.

Hi Mike,
the multi qso label feature works great, even better than what I imagined when it was first suggested in the xmlog list and more richly featured than one of the major commercial logging software packages. the picture import feature is exotic.
thanks,
gl es 73 de Cliff N7HIY

173. run-time error '11' bug report

Yahoo group: XMLog
Date: 2001-07-05 23:21:26 UTC
From: jjbryant54@yahoo.com
Topic: 173 Message: 173

First of all let me say thanks for making your program available as freeware. I am just starting to use it and have imported most of my log entries from my manual log.

During this process, I discovered a bug in your code that results in the following error message:

Run-time error '11': Division by zero

when you click on ok the xmlog immediately shuts down.

This error occurs in both v.4.16 and v.4.17 whenever you enter a call for someone who resides close to my home station (same zip code). I am using RAC and have xmlog set up to pull the call name and address from there.

Please let me know if I can be of any further assistance. 73s Jim, KC5HAV

178. Beta version 4.18 available

Yahoo group: XMLog
Date: 2001-07-12 18:19:46 UTC
From: Mike McAmis
Topic: 178 Message: 178

Version 4.18 of XMLog is available at www.xmlog.com/beta

This version includes a new report that displays log entries using Microsoft Excel and allows you to select which log entry fields are displayed. To invoke the report use "Display/Display Excel". You must have Microsoft Office installed - I've tried Office 97 and Office 2000 and they both seem to work OK.

Excellent.

>I'll add the grid summary feature to the "to do" list.

Double excellent, thank you.

I have just recently started using your program and it is very good
so far. Does what it is supposed to do without too many redundant
fancy "features" and seems very stable. A little different in the
look and feel, takes a bit of getting used to.

180. Re: [XMLog] Beta version 4.18 available

Mike,
You are doing great work with this program.
I love it.
I have been using it for some time and I feel it is time to send
something along to help support the programming and the Web site.

I may start bugging you about some nice features I would like to see,
but I figure that you are busy enough with the upkeep but ...

Thanks again

Joe

From: Mike McAmis
Topic: 182 Message: 183

Hi Craig,

XMLog only has limited support for VHF. You can log VHF QSOs but VHF isn't supported by the awards reports or Packetcluster alert features.

This will change someday but not in the immediate future. The 160-10 mentality is deeply wired into the program (dating back to the original DOS version).

Ah! Therein lies the rub.
I was trying to "fake out" the program and get it to print self-address labels for me, from a custom layout comprising only TEXT fields and no DATA fields.
I apparently got myself in trouble trying to fake it out.
Just forget my question.

Thanks,
73 de Gerry W2GER

194. Wrong color on first fields of custom QSLs

Yahoo group: XMLog
Date: 2001-07-22 20:06:36 UTC
From: Gerry Cechony
Topic: 194 Message: 194

Hi all--

I'm using version 4.16 now, had the same problem in 4.00. Printer is a Hewlett-Packard PSC-500 (color inkjet).

I'm using custom QSL label layout to print QSL cards, four to a sheet of card stock.

The first field in the layout is a TEXT field containing my call, and is specified to print red. On the first card on each sheet it prints black. (Prints okay (red) on the 2nd, 3rd, and 4th cards on a sheet, black again on the first card of each successive sheet.) (Other fields, none of which are specified to be black, all print correctly.)

I thought I might get around the problem by adding a TEXT field ahead of my call, containing "de:" in very small letters (6-pt), since I wouldn't care what color that printed. But both "de:" and my call exhibit the problem.

TIA
73 de Gerry, W2GER

Warren:
OPen a log file.
Select all or part of it.
Go to import and choose "export ADIF file"
Abox will come up for you to name the file after asking you to use all or
the selected entries.
Name the file and it will save it as that name.

Now you have an ADIF file of your data ,to do with as you wish .

Warren,
I believe you would open whatever log file you would like to convert from the "FILE" menu, use the import menu to export that file and name it whatever you want to name it. You don't see any ADIF files in the dialog because there aren't any yet- you have to convert the log you have open into that format.

Hope this is correct and it helps...

200. XMLog callsign lookup format or spec?

Yahoo group: XMLog
Date: 2001-07-25 18:21:59 UTC
From: ekdave@earthlink.net
Topic: 200 Message: 200

I'm mulling over the notion of building my own callsign database from the files which can be downloaded from the FCC site. Of course, I'd like to be able to access this database from XMLog, just like you'd access any of the commercial callbook CDs. I figure that two approaches could be used:

1) make my database look like one of the others, so that XMLog thinks it's getting data from one of the other databases;

2) if there is a code interface expected (or implemented) by XMLog, I could write a front-end DLL to go between XMLog and my database.

Are either of these feasible? If so, is the format or interface information available? Or am I reinventing the wheel here?

Thanks,

Dave Ek

202. ADIF export bug with digimode ?

Yahoo group: XMLog
Date: 2001-07-26 08:13:39 UTC
From: jonni@surfeu.de
Topic: 202 Message: 202

Hallo XMlog user,

If I export data in ADIF, then the mode transfer is wrong,if it concerns digimodes.
Always rtty is insert as mode.
The original data for example PSK31, MFSK, MT63, FH etc. changed to RTTY.
In the Menue- Display in XMlog everything is ok, but if you look in the ADIF file, the mode is always RTTY, except standart modes SSB, CW etc.
Installed the new XMlog version 4.16 and use the Log from 3.01, runnig under WIN98 German.

Do you have suggestions or a solution?

73 de Jonni DH2LJB

Hallo Mike,
Thank you very much for your promt answer and explanation.
I checked the ADIF standard and unfortunately it is thrue that
the data modes are not supportet very well.
I was surprised, because if I checked as a newcomer my eqsl cards,
all digi modes from other OM's are in.
However, I don't know which way they are using, key in manually ?
use a program in addition ?
Temporary I will edit the modes in the ADIF files, but takes time
and is not so comfortable hi.
Hope that the ADIF group introduce the new version soon.
Thank you for the XMlog 32bit version, and your support.

Hi Jim--

When I said I import from the QRZ database into XMLog, I was not referring to the QRZ website, but to the database purchased on CD from QRZ.

I don't think there is a way to import from the QRZ website.

The automatic lookups are very convenient, especially if the database is copied from CD to hard drive (then they're practically instantaneous). I recommend it highly.

211. Database import

Yahoo group: XMLog
Date: 2001-08-03 11:59:37 UTC
From: Comfort kraft
Topic: 211 Message: 211

Is there anyway to import the FCC data into XMLlog? I downloaded the database to import into another logging program,(not XMLog) but it won't work for that program .
Thank You,

Gang,

I'm working on doing exactly that right now. Mike has provided me with the interface for the ham call CD access dll, and I've created a version that will read data from a database I created based on the downloadable FCC data. After I get it finished I'll release the DLL and some instructions on how to get the data for yourself. One note up front--creating the database will require MS Access 97 or newer.

So far I've created the database and I've succesfully accessed it using the DLL I created. I still need to try to handle returning counties and lat/lon data. It should be finished in a few weeks.

I'm heading off on vacation so if you email me (or the list) with questions about this I may not see them for a few days.

214. Beta 4.18 feedback?

Yahoo group: XMLog
Date: 2001-08-04 15:42:10 UTC
From: Mike McAmis
Topic: 214 Message: 214

I'm interested in feedback on the new "Display/Display Excel" feature
that was added in version 4.18 (available at www.xmlog.com/beta).
Any problems, suggestions?

Mike - W1ECT

P.S. - If you'd like to reduce the number of XMLog email's you're
receiving go to groups.yahoo.com/group/XMLog and use "Edit My
Membership" to set the "Daily Digest" option.

Mike
Sorry I missed the 4.18 posting.

Using Win 2K, Excel 97 - everything worked fine - default, selected fields and all.

Very useful for some manipulations.

Thanks

217. Using with the IC-746??

Yahoo group: XMLog
Date: 2001-08-05 17:08:07 UTC
From: dcorio@adelphia.net
Topic: 217 Message: 217

In trying to set up XMLog with my Icom IC-746, I keep getting the error message "Rig Address Too Large" when I select the 746 as the rig. The program automatically populates the rig address with 56, which is correct.

Do I need to change the address in the Icom, or does this need to be entered into the program in hex?

Thanks in advance & 73
Dave

Topic: 214 Message: 220

Mike,
Cant say enough about the display Excel feature. This will allow some really good manipulation without having to access the database directly, as I have been doing. Of course my custom reports are now scrap :)
Question in 4.19 about the ADIF export. I do see that on new entries it accepts the new modes without having defined them (i.e.. pcw); however, when I export they still show as RTTY. Will this be revised in the future so that the mode will reflect the individual data mode during ADIF export?

221. Mlog suggestions

Yahoo group: XMLog
Date: 2001-08-08 16:28:31 UTC
From: jagius@sybase.com
Topic: 221 Message: 221

Mike:

I thought that the following features would be useful:

1. My main data base is on my home computer but I work on the Mlog file at my work computer as well.
Then I make a copy and carry it back and forth. The file is approaching the 1.4 MB limit of a floppy.
Is there an easy way to code just to select the changed or updated entries and then I could create an adif file or an Mlog text of just those that changed and import them into the other?

2. For Zones worked/confirmed - if a zone has not been worked, is it possible to list the zone number only
so that it is obvious which ones are still needed?

Feedback on 4.18 Excel report.

This is excellent and very flexible. I love it. I can move columns around and create any report I need.
The only suggestion thus far is that the date column seems to be locked up and cannot be reformatted into different date styles.
The other columns are formattable but not the date. This may be a quirk from Excel. I was going to try to save it as some other type and trying to reimport it but I haven't gotten around to it yet. Perhaps it's just some bit that gets locked up in the import.

Seemingly Observed bugs:

1. In multiprint QSL label, the sort seems to be by month only and not by year also. This results in printed QSO lines
out of sequence.

Hi John,
Actually I hadn't thought along those lines although it is an option.
Thanks for pointing it out.

I have been using the disks for a couple of reasons:
1. I have a continuous backup system - I save key ones for restoration
purposes.
2. BAckup is of the computer in case of a real disaster.

Thanks for the suggestion and I'll see if I can work it in.

Hi Joe,

1) For moving big logs, try some utility that can do a compression. The plain old Microsoft Backup provided with Windows should do the trick and can handle multiple floppies.

2) The best way to see your zone-by-zone status is to use "Awards/WAZ Checklist".

3) The latest beta at www.xmlog.com/beta has a change to the generated Excel report that allows date and times to be reformatted within Excel.

4) I'll check out the label sorting...

Hi Warren,

Yaesu has a nasty habit of changing the CAT commands for each rig so this makes supporting each new rig a bit of a pain. If you can send me a copy of the pages in your manual that describe the CAT command set I can add the 980 to the list with your help.

Thanks,

Hi Mike,

I understand that labels get sorted by Prefix first then Call, Date, and Time to make
it easier to sort cards to be submitted to the outgoing QSL bureau.

My point is that within thar scenario, if there is a multi line label, the sort of the qso lines within the label
get sortede only by month and not by year. I am sending you an adif file of one of my labels for M6T.
If you load it into a log file and then print it using the multifile label, you can see all the Februarys first regardless of year,
then May of the previous year followed by July of a later year and finally October from 2 years back.

It won't do much good just to look at the adif file, since that order is irrelevant.

If that doesn't show the problem, I will print my label file then scan it and send it to you.
Don't know of any other way to do it since there is no option to print labels to a file.
The labels.out file is too early in the process to demonstrate anything along these lines.

Joe

OK Joe - The sort was broken. It was sorting as a string in MM/DD/YY format which was causing the effect you saw. I've fixed it for the next version.

232. .NOD file syntax question

Yahoo group: XMLog
Date: 2001-08-11 12:58:36 UTC
From: marty_kx@yahoo.com
Topic: 232 Message: 232

Is there any way to set up a "match" line so that it will recognize either of two words and trigger the same "send" response?

A station I connect with might respond to my password with either of two different lines, each having a different ending, depending on the station's current status. I would like to send the same command when either ending is received.

TIA for any suggetions.

Marty K1FHR

233. .Nod file syntax question (addendum)

Yahoo group: XMLog
Date: 2001-08-13 15:49:06 UTC
From: marty_kx@yahoo.com
Topic: 233 Message: 233

I thought my question might be better illustrated with an example.

This is the form of a file I am using to get into a chat node:

```
connect xxxxx.ampr.org
match login:
send k1fhr
match Password:
send mypassword
match Z>
send conf
match in
send /n k1fhr
match users. **
send /ch 88
```

** "users" may be replaced by another word, and I would like send
the same response (/ch 88) regardless of which of the two is used.

I did go over the pertinent info in the help files (version 4.00) but
couldn't work it out.

234. Re: .Nod file syntax question (addendum)

From: Mike McAmis
Topic: 233 Message: 234

Hi Marty,

There's no "match a or b" feature for node files. If you're lucky perhaps there's some character sequence that's contained in both responses. I'll look into the problem, perhaps adding a "pause xxx" command would be good enough.

Mike - W1ECT

From: marty_kx@yahoo.com
Topic: 233 Message: 235

Thanks Mike. Your suggestion was the key to solving the problem.

First, the common character was a period at the end of the words
being used. So I eliminated the words and left the periods. That
worked.

Then I wondered if the periods were actually being recognized as
characters (are they?), so I eliminated them, and it still worked.

Next, I realized that there was only one response that actually
required a specific command to be sent, the login, so I eliminated
all the other match lines and put all of the subsequent commands,
separated by commas, on one send line. That worked too, and is
really fast. Just 3 lines:

```
connect <internet address>
match server.
# following are the login and channel specifiers.
send /n K1FHR,/ch 152,/le 3694
```

```

236. Mode compatibility XMlog-ADIF.

Yahoo group: XMLog
Date: 2001-08-16 12:08:58 UTC
From: jonni@surfeu.de
Topic: 236 Message: 236

Hi Mike,

I checked the new version XMlog 4.19 beta whether the new modes will transfer correctly into adif file now.

You added new data modes which are now officially supported for ADIF import/export.

But there are still modes which are not include.

It is difficult to make a correct ADIF export, if between XMlog modes input possibilities and ADIF mode export support, are differences.

If I make an ADIF file upload to eQSL I am never reliably whether the modes correctly in the ADIF file.

I always have to check the identic of modes inside of ADIF file and edit if necessary, before upload .

Is it possible to tolerate that all modes, include define custom mode,from XMlog are later in the ADIF export file ?

Or a selection possibility official ADIF, ADIF plus include define custom mode ?

Otherwise never or very late new operating modes are supported in the ADIF file.
Also I think that was the reason that you enhanced the include define custom mode.
E-OSL accept all modes as well.

Please understand this as suggestion.

237. Excel Display

Yahoo group: XMLog
Date: 2001-08-19 00:34:05 UTC
From: Charles Stampf
Topic: 237 Message: 237

The new EXCEL display feature is great. I'm contemplating generating my QSL cards using the data from EXCEL. Initial tests have provided good results; with one exception.

It seems that when porting the data from XMLOG to EXCEL, the RST fields are being interpreted as date data. A 5-9 signal report becomes 9-May. Have I forgotten something in my set-up, or is this a bug?

Thanks Mike.....

238. Lost my copy of version 4.0

Yahoo group: XMLog
Date: 2001-08-19 14:35:16 UTC
From: Joe Burnham
Topic: 238 Message: 238

Hello all...

I need to locate another copy of version 4.00 of XMLog, as the latest release is making my P200 Windows 98 machine unhappy (version 4.0 runs fine).

If someone can point me to a web address, or perhaps send version 4.0 as a ZIP file attached to an e-mail to me, I'd appreciate it!

239. How to make your own callbook database for XMLog

Yahoo group: XMLog
Date: 2001-08-19 18:43:35 UTC
From: David Ek
Topic: 239 Message: 239

All,

I've created a MS Access 97 database and a utility DLL which you can use to create your own callbook database for use with XMLog. I've placed the necessary files into a zip file and put it on my web site so you can grab it and make your own callbook if you want. It's at:

http://home.earthlink.net/~ekdave/callbook.zip

The zip file is a little over a MB in size and contains three files:

README.PDF - a PDF file containing instructions on how to build the callbook
THEDATA.MDB - a "seed" database which you'll populate with FCC data
RACCD32A.DLL - the callbook DLL for use with XMLog

What you'll need to do is download the 50 MB FCC callsign database from the ULS web site, import three of its text files into Access as tables (a very easy but time-consuming process), and then set up XMLog to use the resulting database.

The instructions should be pretty clear, but drop me an email if you run into problems. If you do it, let me know how it goes.

One other thing--you need the MS Access 97 software in order to build the database--I should've mentioned this in the original message.

Joe,

I'm pretty sure Access 2000 can be used, but I don't have it so I can't test it. I imagine that the step-by-step procedure I concocted might need a little modification for Access 2000, but I would think that it should be pretty close. If you try it and make it work, please write down the procedure and I'll add it to my instructions for the benefit of other folks, okay?

Good luck -

Dave NK0E

From: Mike McAmis
Topic: 237 Message: 244

Hello Charles,

The format for columns like rst is currently set to "General" and
thats seems to be causing the problem. Excel sees the 5-9 and assumes
it's a date. I'll change the format for the appropriate columns to
"Text" in the next version.

Just like that!

I'm wondering if there is a way to add the slash mark to the ZERO in my call?
I presume you mean on a QSL card printed by the QSL Label function? It would take some trial and error, but could you construct it with the LINE function?

Hi Ron,

There are a couple of fonts you can choose that show a zero
differently than the letter O. Use Options/Log Options and use Log
Font to select either Terminal/9/Regular (has a slashed zero) or
FixedSys/9/Regular (has a squiggle in the zero).

From: m.mcamis@valley.net
Topic: 254 Message: 257

If you use Alt/0216 as a substitute for a zero remember that it can cause some side effects. The resulting character will not be treated as a number. This means that searches with numeric wildcards will not match this character. Also, it can cause problems when exporting these entries into other programs that don't appreciate what they consider to be a "non-ascii" character. Also some programs recognize a call by its form and whine when they get a callsign that does not contain a number. Anyway I'm not saying don't do it, it's just that switching fonts is safer (not to mention makes typing zeroes simpler).

Panic over. Found the original IOTA.lst in my backup files - put it
in to over-ride the incorrect one and everything seems to be working
OK again. Silly old duffer!
John.

261. Re: Slash Zero(Ø)

Topic: 254 Message: 261

It turns out that there was a long-standing bug that caused any font changes to the log window to be ignored on subsequent XMLog sessions.

The current beta test version (4.23) available at www.xmlog.com/beta includes a fix for this problem.

262. Frequency and Mode from rig

Yahoo group: XMLog
Date: 2001-09-19 23:03:47 UTC
From: Howie Wilson
Topic: 262 Message: 262

When attempting to get frequency and mode from rig, the error "bad format in rig (length/mode)" occurs. Using either the ICOM Ic-746 or the TEN-TEC 735. What am I doing wrong?

I look forward to the reply to this because I have the same problem on occasion. It isn't consistent but I do get it occasionally. The cure seems to be to exit xmlog, turn off the rig, turn on the rig again and then restart xmlog.

Hi Howie,

Here's how to get some debugging info so we can see what's going on. Use the "Options/Log Options" menu to temporarily set your callsign to RIGDEBUG. Then try to get the frequency from the rig (just answer OK to the prompts). Make sure to note the rigs mode/frequency. Reset your call and exit XMLog. There should be a file named rigtest.out in your XMLog folder (usually c:\mlog). Send me an email with that file as an attachment to m.mcamis@... and let me know the mode/frequency. If you go through this again - delete the rigtest.out file before you start XMLog (it just keeps appending new info to the end of the file).

Hi Mike,

I had this happen to me again last night. Problem is that it is not consistent. The next log entry I made it worked fine. However, if I see it occur more frequently, I'll do as you suggested to Howie. I also use a 746.

Thanks and I look forward to your solution on this one. 73

270. Problem with Internet Cluster Connects

Yahoo group: XMLog
Date: 2001-10-03 05:45:46 UTC
From: Kevin Nathan
Topic: 270 Message: 270

Hi Michael and All,

I am experiencing trouble with version 4.23 and internet dx cluster connects. I can log onto a cluster with no trouble but, if I am on the connection for any length of time and then send a command, I get a message something like "network error, connection reset by remote host". I do not get any errors of this nature when connected by TNC. I am running Windows 98 second edition. Can anyone tell me why this might be occurring and what the cure is?

Thanks much and 73.

From: Mike McAmis
Topic: 270 Message: 271

Hi Kevin,

This message is displayed when the connection to the cluster is lost. I've seen this problem when connecting to certain cluster nodes on the Internet (and I see the same thing if I connnect to the node with Telnet or a browser). Best to try other nodes until you find one that's more reliable. You can check

http://www.cestro.com/pcluster/telnet.html

for a list of nodes - however you'll find that many are offline, closed, or unreliable. He's got the page set up so that if you click on an entry it will try to connect to the node. If you just want to see the address for the node just move the mouse pointer over an entry and your browser should display the address at the bottom of it's window. Sorry but I don't have any specific suggestions but I haven't been using Internet connections lately, perhaps other folks can help here.

Hi,

Typically each Yaesu rig has it's own unique CAT command set. I'll search the web and see if I can find the documentation online but I'd appreciate it if you could send me a copy of the CAT command documentation from your manual to:

Michael McAmis

276. Ducie Island

Yahoo group: XMLog
Date: 2001-11-09 17:21:28 UTC
From: Mike McAmis
Topic: 276 Message: 276

As you may know there's a new country that's likely to be added to the DXCC country list - Ducie Island. This island is near Pitcairn Island and a DXpedition is on the way and plans to be operational November 16th.

I've added this new country to the prefix file for the next release but if you'd like to add it to your current version here's what you need to do:

1) Go to your XMLog install folder (usually c:\mlog) and open the prefixes file with a simple text editor like Notepad or Wordpad.

2) Find the Pitcairn entry and add the description for Ducie immediately afterward. The results should look like this...

```
VP6,Pitcairn I.,OC,32,[-25.1/130.1],ADIF=172,OldPrefix=VR6,
VP6,!,
VP6/D,Ducie I.,OC,32,[-24.5/125.0],
!,
VP8/F,Falkland Is.,SA,13,[-51.75/59],ADIF=141,
!,
```

If you don't feel comfortable making changes like this, make a copy of the prefixes file before you edit it so you can restore it if something goes wrong.

When it becomes obvious what call the DXPedition is using choose the "DX/Show Callsign List" menu item and add an entry that defines that callsign as Ducie I.

Good Hunting, Mike - W1ECT

277. Latest Beta 4.27

Yahoo group: XMLog
Date: 2001-11-20 16:41:32 UTC
From: Craig - N7OR
Topic: 277 Message: 277

Hi Mike and all. I have not payed attention to releases since I was asking about 6 meters back in July. I now have latest beta and I am happy to see 6 meters added in some places. What would make it complete for my use would be VUCC tracking, on 6 only, but that is my personal want. Maybe add it to the bottom of the to do list? Thank You. I mean on the main log window, under awards. Down there below IOTA, maybe? That would really be cool. Meanwhile, having the ability to track the other awards on that band, and have six available in the 2 packet windows, is fantastic.

One question on the Excel feature, also new to me. I am assuming that I can manipulate the log in Excel. Things such as fixing the missing fields from various imports, adding states where known, and any other touch-ups. And then, re-import the fixed up log? I am studying the help, but I am really poor at Excel, I just never use it that much. So, after I do some fixing, do I save it as a text file of some sort? Or, just how is that done. I hope this can happen, that would be awesome. Thanks for your hard work. I finally found something to use to keep what I call my "master log", contests, everyday, 6 mtr., etc..

Hi Craig,

Thanks for the feedback on the 6 meter support. I do have the VUCC report on my to-do list...

The idea of the Excel report was to allow you to customize which fields get displayed and also allow you to customize how they are displayed. I don't have any plans on allowing you to import the results back into your log - all the fields may not have been exported and dealing with format errors, etc. would be a bit of a pain.

From: Richard
Topic: 279 Message: 279

Hello

I have downloaded version 4.23 and am experiencing a few problems.

I am using a Kenwood TS-570DG and when getting the frequency from the radio I am on 28.406.80 but on the program it displays 28.407. Is there anyway of changing this so it will display the exact frequency or is this standard with CAT control??

When trying to connect to a dx cluster via the internet a message box opens and asks for an address, what needs to be put in here, I tried a few IP addresses that I use with telnet to connect up but they never connect, any ideas??

Thanks

Richard

Topic: 277 Message: 280

Ok, I was dreaming of a pristine log.

On the 6 meter stuff, I can add to the XMLog spots window or create a whole new set that includes six, but it never stays. What do I do besides press "SAVE". I think it mostly happens upon restart, but maybe when moving, sizing or otherwise playing with the spots window? When I go in and look, the title and freq. limits are just gone.

And I have not found this yet in manual, is there a way to save the window sizes and positions? They always default to something I have not chosen.

Thank You very much for your hard work and answering dumb questions.

Hi Richard,

XMLog doesn't record the frequency down to Hz, only to kHz.

What's an example of an Internet address you're having problems with?
You can email me direct at m.mcamis@... if you don't want to
post the address here.

Actually, after further study, it seems that either my Kam or the cable between it and the computer may be bad.

Thanks and 73.

Be sure you have a good 12 volt supply to the KAM. Had the same problem a
few years ago. The wall txformer I was using was mistakenly set to 9v and
just garbage on the screen.

291. 2 Questions 4 Mike and/or group

Yahoo group: XMLog
Date: 2001-12-04 19:09:03 UTC
From: Craig - N7OR
Topic: 291 Message: 291

1. When I set the background color on the Spots window, it reverts back to bright green. Is this broken?

2. What would be the best way to change a field in every log entry? Lets say I want to make make the qsl in field equal "?" on every q? Is there a way to do this in the log window? Is there a good solid way to do it to the text export file? Excel maybe? Has anyone done this with a field?
TIA - Craig N7OR

Oh, 4.28 Beta is working great, 6 meter support and ability to view grids worked is just enough. I'm not grid crazy, I just like keeping track. Thanks, Mike.

Question 2.

I have successfully exported all records that I wanted to update as an ADIF
file, editted them and reimported them.

Hi Craig,

1. I've tried diddling the spot window colors here and it seems to work ok. This info is saved in a file named "spotinfo.ini" in your xmlog install directory (ususally c:\mlog). After you make a change and hit the Save button you should see changes to tags like SpotColorBack, etc.

2. There's no way to make bulk changes to fields within XMLog. It is possible to do this using Microsoft Access if you're adept with this product. The main limitation here is with the version of Access you have verses the version of the database (log file). Access may say that "you can't make changes" but this is often an overstatement and it means that you can't change the database layout or saved queries but you can change field values within the database. One thing you don't want to do is answer Yes to any "Do you want to update/convert the database" messages.

It's also possible to change values using ADIF exporting, doing edits to the ADIF file, and then importinging the results.

Perhaps in the future I will allow the results of a Display/Excel to be reimported back into the log but this actually would be a pretty tricky process.

In any case, before attempting large-scale changes like these be sure to back up your log file in a safe place.

Well, it does not "save" the spotcolorback for me. I went in to
that .ini and just added the line I wanted for a black background,
now all is well.

296. QSL label problems

Yahoo group: XMLog
Date: 2001-12-07 09:43:13 UTC
From: Mark Marsden
Topic: 296 Message: 296

Hi Mike & group

I'm using XMLog 4.22 and am having problems with laying out QSL labels.

I have been successfully editing a QSL layout and using Ctrl B to
handle batches of cards. I have successfully 'developed' a label
a few times, but now I get this error message when I try and save it.

Can't save layout record in recordset.
(3315) Field 'Layouts Source' can't be a zero-length string'

There seems nothing wrong with the label I'm trying to save, so I tried
editing some of the example QSL labels - can't save those either.

On another subject: The Help recommends looking at
"Demo QSL-5" and "Demo QSL-4 Small" for examples
of handling multiple QSOs, where are they?

Thanks, 73 Mark G4AXX

Hi Mark,

Could you send me your layouts.mdb file as an email attachment to m.mcamis@... You should find this file in your install folder (usually c:\mlog).

Why not c:\xmlog? Well, the program was originally called MLog until someone pointed out an ad in QST for another logger called MLog, at that point it was rechristened XMLog.

298. Needed List error

Yahoo group: XMLog
Date: 2001-12-10 17:46:45 UTC
From: n6ng
Topic: 298 Message: 298

Hello all..

Anyone else run into a problem creating the "Needed List"

When I try to make a needed list, it gets about 1/2 way
through and gives the error message:

Can't create Need List
(5) Invalid procedure Call or Argument

I've done this in the past and not had a problem.
I should mention that it does print about the 1st half of the list
after I close the error msgbox.

I don't know if it is a current version problem or a log
size problem. I'm using a log with 8000 log entries. Could
that be part of the problem?

Any suggestions?

Thanks
Dennis N6NG

303. new beta bugs

Yahoo group: XMLog
Date: 2001-12-11 18:37:31 UTC
From: N7MAL
Topic: 303 Message: 303

I like the newest version but have some problems:
1. It won't import 12 meter contacts from an AD1F file. The 12 meter contacts are there and the fields do not appear to be corrupt. I imported approx. 900 contacts and only the 12 meter contacts got lost.
2. I have MLOG set to start with the packet window open. If I'm connected to the i'net the packet window won't start, it locks up. If I disconnect from the i'net and close the DUN, MLOG starts up perfectly displaying the packet window. I can then bring up the DUN and make my connection.

MLOG has been working perfectly for me until I installed the new beta. I made no changes.

Yahoo group: XMLog
Date: 2001-12-14 14:49:24 UTC
From: w1ect
Topic: 303 Message: 307

Hi Mal,

Well I found the problem with the ADIF imports. It turns out this bug has been there since ADIF imports were implemented back in version 2.06! The file you sent only has "BAND" fields and no "FREQ" fields - this normally shouldn't be a problem since XMLog will fake a frequency in this case. However it wasn't doing this when BAND was 12m. I'll fix the problem but you can get around it for the moment by editing your ADIF file. Just do a global change of

<BAND:3>12M to

<BAND:3>12M <FREQ:6>24.890

By the way - the :3 and :6 define the number of characters in the field.

The other problem will take some more research. It's caused by the fact that XMLog is starting up with the packet window minimized and when it prompts for the Internet address this prompt 'belongs' to the packet window. Somehow this is causing the prompt to lose focus and clicking on the prompt doesn't help. Clicking on another applications window and then back to the prompt seems to get things going though. I'll try to see what's going on but I suspect that this is some kind of Visual Basic runtime bug. Like I said it only happens when you end your last session with the packet window minimized and when restarting it trys to prompt you for the Internet address in this state.

Hello Group,

Terry had backed up his log to a write-once CD and when he restored it
to his hard drive the "read-only" attribute from the CD was copied.
So, once the problem was diagnosed all he had to do was clear the
read-only flag from the Windows file explorer (via "Properties").

Nice to see that he did have a backup of the log available. Don't
ever assume that your drive won't die or get trashed somehow...
regardless of what logger you use.

From: n3dd
Topic: 317 Message: 317

Hi Mike

I've been using the program for a couple of months now and it is absolutley great!

However, since this is the only log program I've ever really used and have no previous files, is there any way to "back into" the DXCC worked/confirmed count or do I have to add log entries for each and every country, band and mode. Since I have over 200 countries confirmed, I'm really only interested in detail on a go forward basis.

Thanks and 73,

Dom N3DD

Topic: 317 Message: 318

Hello Dom,

Sorry but there's no way to affect the DXCC statistics without adding log entries. If you don't have your log on paper for your DXCC QSOs probably the best way to get started would be to enter QSOs based on QSL cards you have. I suppose that in the worst case where you don't have QSL cards for band or countries that you have confirmed for DXCC you could add bogus log entries (using a callsign that would make it obvious that the entry didn't represent a real QSO). It's best to bite the bullet and enter any paper logs and import any contest logs you have - this doesn't lock you into XMLog since almost all loggers suport ADIF exports and imports.

Mike

This probably seems obvious, but: Just sort your cards out by band/mode and no duplicates. That would be easier. Why enter Japan on 15 meter ssb 4000 times. Know what I mean? 73 - Craig

320. automatic login to the DX cluster

Yahoo group: XMLog
Date: 2002-01-13 00:51:07 UTC
From: zamba0321
Topic: 320 Message: 320

This is a new feature request:
can the packet terminal automatically login to the
dx cluster. Just send callsign and password upon connect

Here's what w6rfu telnet DX cluster at 128.111.56.240 asks

Your callsign:
Password:

perhaps by having a programmable prompt string and response
this would work for most systems ..

just my 2 cents ...

Topic: 320 Message: 321

Here is my login file for W6FRU. You need to create a, text, file named W6RFU.NOD and add your own password in place of ....

```
rem
rem Internet PacketCluster at W6RFU
rem
connect 128.111.56.240
send #me
send ..............
```

I have attached the file but it will probably get stripped off. The help files provide a good guideline for creating these files.

323. update spots window using history of spots

Yahoo group: XMLog
Date: 2002-01-16 02:32:18 UTC
From: zamba0321
Topic: 323 Message: 323

Since I was helped so fast
with my previous question, here's another one.

When I connect to the DX cluster, only new sport show up
in the spots window.

It would be nice to somehow do a sh/dx/30
and then update the spots window with these 30 last DX spots.

It is usefull since xmlog shows heading, country info
and if the spot is needed on that band etc.

thanks
KD6ZUC

another option would be that if I right click on a call in the
dx spots history I could see the info (country, heding, worked or
not). Just like I can right click on a frequency from the packet
window and set the rig to that frequency.

You could write that sh/dx 30 into your script for logging onto the cluster and that will bring them up for you. I've found however, that these older spots are often really cold and not very useful.

Good luck and 73.

Some packet cluster nodes support another form of the sh/dx command
that formats the information so that it looks like a spot (which
XMLog will pick up and show in the spots window). Try it out and see
if your node supports this feature:

sh/fdx/30

You should be able to move your mouse over calls displayed in the spot window and the info should be displayed in the status line at the bottom of the window. You can also right-click or double-click on calls in the spot window to set the rig frequency. These features are included in the current version at www.xmlog.com (version 4.23).

Topic: 323 Message: 328

Hi Mike,

it works indeed great in the spot window, and I do get the info
and can set my transceiver (TS570D). However I was wondering if
it could do the same in the packet window when I right click
on a call. It shows the call in the pop-up menu, but not the other
info.

This is only usefull when the spot has gone (timed out) and I'm
clicking on an older spot on the packet window.

I tried the sh/fdx, but the CLX version at W6RFU does not support it
unfortunately. Perhaps I can find another telnet dx cluster on the
west coast ...

329. CAT defaults

Yahoo group: XMLog
Date: 2002-01-18 13:03:10 UTC
From: g4cdz@aol.com
Topic: 329 Message: 329

Hi Mike

Am using the CAT interface successfully with both the FT847 and IC746 via a switch box from a common PC serial port.

Changing the HF Rig select option is clearly no real problem, but is there any way I can set (and save) the default baud rate to 9600 for both rigs. Currently the IC746 revert back to 1200 bauds even when I save. Strangely the FT847 is retained at 9600.
I looked in the editable files but haven't found the lookup table.
Thanks and regards

Barrie - G4CDZ

Hello Barrie,

No, there isn't a way to set the default baud rate that is selected when you pick a new rig type (the values are hard-coded). I tried to pick default values that apply to the rig when it's shipped (this used to be a good strategy when rigs didn't allow you to select the baud rate). However I can change the hard-coded default if it's not correct - what is the right "new out-of-the-box" baud rate for a IC-746?

Mike

Thanks your usual prompt response. Obviously nothing wrong with your default strategy.
The out-of-box rate for the IC-746 is in fact Auto, but I couldn't get this to work at your default 1200, it does of course work at rig setting 1200.
The only reason for pushing it up to 9600 (on the rig(s)) was to achieve compatibility with another CAT interfacing programme I use,

Its no real problem, just my tidy mind and laziness I suppose.

Thanks and regards

332. Importing Log files

Yahoo group: XMLog
Date: 2002-01-22 19:23:14 UTC
From: wa2aeh
Topic: 332 Message: 332

I exported my LOGIC5 log to a stand alone file and then imported it to xmlog.

When opening the file, xmlog will access the file correctly but I cannot access the individual entries. I can access the stats part of the program however therefore, I know the log is there. In other words, when I have loaded the file/log, it wants me to select a call letter but I cannot because I cannot see the log. The scroll bar at the bottom is subdued and not accessible.

All the fields are blank yet I know the log is there because I can run all the stats such as WAS, DXCC etc. So, how do I access the individual log entries immediately upon loading the log.

Hi Bill,

When XMLog starts up and a log file is opened no log entries are "currently selected". To select entries for a specific call click the "Select" button, fill in a callsign in the Call field, and click the "Search" button. You can then use the scroll bar to move through the entries (if there was more than one match). To select all entries in the log click the "Select" button, don't fill in any fields, and click the "Search" button.

For more info on selecting entries from your log see the "Searching the log" section in the help file. Let me know if you have any problems.

From: zamba0321
Topic: 334 Message: 334

Hi,

I just upgraded my license and have a new callsign, what is the best
way to set it up in XMlog ?
Should I close the logbook for my old call and start a new one with
the new call ?

Then perhaps I should import my older log in there to see my old
contacts ...

any ideas ?

thanks

No problem - just use the "Options/Log Options" menu item to change
the callsign. Log entries do not have a callsign associated with
them. Currently the only way to keep entries for a different call
would be to maintain them in a seperate log file.

336. interface XmLog to DxView

Yahoo group: XMLog
Date: 2002-02-16 04:50:38 UTC
From: zamba0321
Topic: 336 Message: 336

Hi Mike et al,

I love using Xmlog together with the DxSpots and packet/telnet
cluster and radio interface.

I recently tested some applications from dxlabs
http://www.qsl.net/dxlab/

and found the DXView application quite nice. It shows the DXspot
or any entered callsign on a worldmap, and even has individual
maps for each country.

The author says that the DDE interfaces to the application are public
so I wonder what you think about interfacing to DXView application.

It would be a nice addition to XMlog

Greetings;

I'm just in the process trying out XMLog. I'm looking for a replacement for the old DOS-based log book that I've been using for many years.

I really like the graphical representation of cluster spots. The band-map concept is great!

Is there a way to have have the DX station's callsign automatically inserted into the callsign field of the log window when I double click on a DX spot?

Thanks;

Dave Quick

Hi John,

During an import XMLog only does a dupe check on the first entry in the file being imported. This check is there to keep you from importing the same file twice. I'll add a "ignore all dupes" option to my list of things to do but this feature won't be added in the near future. If you are exporting a file over and over again that just has some new entries at the end perhaps a quick fix would be to just edit the file and delete the dupes at the start. ADIF files are just simple text files that can be edited with WordPad, etc.

From: k0ekl
Topic: 339 Message: 343

Mike;

Thanks for the quick response. Yes, i see that option when I right-
click on the spot, and it does work.

I still think it would be nice to simply double-click on a spot and
have the program enter the current time, frequency, mode, and the
callsign of the DX station.

I also think the time should continue to advance until the contact is
finalized. I may jump to a new spot, but not actually work it for
quite a while, depending on the size of the pileup. I'd like it if
the software continuously read the frequency, etc from the rig,
rather than just once at the beginning of the new entry.

Juat suggestions, of course.

When you do a right-click on a callsign in the packet window and choose "Start a new log entry for..." any log entry defaults you have defined will be applied to this new entry. These defaults can include setting the current time, frequency, mode, and info from the callbook (the call always gets set). See the help for "Edit/Define Defaults for New Entries" for more info.

You can double-click on any date or time field at a later point to update it to the current time or date. You can also double-click on the mode or frequency fields at a later point to update them.

I don't currently have any plans to poll the radio at intervals in order to implement automatic updating of the frequency/mode fields.

Topic: 346 Message: 347

Hi Lou,

Excel has a feature that lets you dump a spreadsheet to a text file
that uses tab characters to delimit the fields. From there you could
hack one of my conversion programs distributed with XMLog. One of
these programs (import1.bas) currently reads a comma-delimited file
and writes an "XMLog format" file that can be imported into XMLog. So
if you've had a little experience with Basic programming this is one
way to go. The advantage here is that once you have imported this
file into XMLog you can export the resulting log file as an ADIF file
and at that point you can move the log entries back and forth between
just about any logging program.

The only limitation of an "XMLog format" file is that it doesn't
handle the address fields (it does handle a single-line QTH field).

Che the documentation in import.bas and import1.bas and the help info
for "Import/Import XMLog Text File".

348. Adding to country list?

Yahoo group: XMLog
Date: 2002-03-21 02:29:54 UTC
From: scott_n9ai
Topic: 348 Message: 348

Can anyone tell me how to add a country to the XMLog country list? I worked Ducie Island and, of course, since it's a new one, it's not included in the country list of my version.

Thanks in advance,
Scott, N9AI

From: w1ect
Topic: 348 Message: 350

I've added this Ducie Island to the prefix fileinr the current version
of XMLog (4.35) but if you'd like to add it to a previous version
here's what you need to do:

1) Go to your XMLog install folder (usually c:\mlog) and open the
prefixes file with a simple text editor like Notepad or Wordpad.

2) Find the Pitcairn entry and add the description for Ducie
immediately afterward. The results should look like this...

VP6,Pitcairn I.,OC,32,[-25.1/130.1],ADIF=172,OldPrefix=VR6,
VP6,!,
VP6/D,Ducie I.,OC,32,[-24.5/125.0],
!,
VP8/F,Falkland Is.,SA,13,[-51.75/59],ADIF=141,
!,

If you've got the version 4.35 or you've updated the prefixes file
manually the next step is to choose the "DX/Show Callsign List" menu
item and add an entry that defines VP6DI as Ducie I.

351. Importing

Yahoo group: XMLog
Date: 2002-03-22 05:33:07 UTC
From: lhlousek@nvbell.net
Topic: 351 Message: 351

Hi Mike,

Thanks for the info. I can certainly move the feilds around and get the data out of Excel into a tab (or otherwise) delimited text file but the last time I did any basic programming was about 32 years ago! I don't have basic on my computer either. I haven't down loaded XMLog yet so maybe I should do that and look at what is involved. Are there other logging programs that will import a delimited text file?

352. XMLog and Idiom Press Rotor-EZ

Yahoo group: XMLog
Date: 2002-03-27 03:00:31 UTC
From: Robert C Jones
Topic: 352 Message: 352

I just wanted to publicly thank Mike for taking the time to modify XMLog to work with the Rotor-EZ by Idiom Press. I added this board to my HyGain Ham II rotor control back in June, but only recently tried it out with XMLog. There was a minor issue with the XMLog software, but Mike was kind enough to research the issue and establish compatibility. Thanks, Mike! Mike says that the change should be in release 4.37. For anyone interested in modifying their HyGain rotor, I highly recommend the Rotor-EZ board. (http://www.idiompress.com/rotor-ez.html)

73 to all,

Bob, W5TU

Mike-

That would be a wonderful feature to an already fantastic program. I use XMLog as my "consolidated" logging program. I am always importing contacts from DigiPan, WinWarbler, MMSSTV and other digital programs. Each time I do an import, it takes a lot of time to edit the files before I import them to make sure I don't get dupes. An "ignore all dupes" option would sure make life simpler!

Thanks!
-David

I don't have basic on my computer either. I haven't down loaded XMLog yet so maybe I should do that and look at what is involved. Are there other logging programs that will import a delimited text file?

Here's what I did:
1. Use Cabrillo Converter (http://www.wt4i.com/) to convert from an ASCII log to Cabrillo format.
2. Use CBR2ADIF (http://www.storm.ca/~ve3iay/cbr2adif.html) to convert from Cabrillo to ADIF.

From: zamba0321
Topic: 355 Message: 355

Hi Mike,

here are 2 possible enhancements:

1) I find it usefull to keep the "DX Show Country List" window
open. This allows me to see what country/heading is for someone
I hear on the band. Right now I need to exit that window
to use other xmlog functions. Also It would be nice for the Show
country list to update the guess as I type it, similar to
when I add a log entry, it guesses as I type.

2) On the packet cluster window, I sometimes do a sh/dx when I log
into the cluster and then try to do a callbook lookup on some
of the calls. When there is no callbook match, it would be nice
to at leats show the country/heading info.

thanks and keep up the good work, I like the program a lot !

When you type in a call into the call sign field in edit mode, you will see
the country and the heading in the window bar
at the top.

You van also run a DXCC checklist report and keep it open having contact
and country information but not the heading.

I find this very useful

Hi,

1) One thing you should try is using the "DX/Check Callsign/Prefix" menu item from the packet window (or use the F4 shortcut). This will give you your country/bearing info. You inspired me to show the country/info in this dialog box caption as you type the call in (just as in the log window). I'll add the same feature to the country list as well. These changes will be available in www.xmlog.com/beta in a week or so as version 4.38.

2) This bug is fixed in the current beta, 4.37

Hi all;
I've been a well-satisfied user of Xmlog for several years now. Just up-dated to v.435 and, up to now, it's been running flawlessly. I have cw alerts enabled. Last night, when I went to bed, cw alerts were alive and well. This morning, having changed absolutely nothing at all, the cw alerts are not working. Checked all the options and all are as they were b4...no change. Anybody else notice this? The PC sound is ok...checked that out...any ideas? 73/dx

From: n3dd
Topic: 361 Message: 361

Hi All

Been using Ver.4.35 now for some time and it has worked fine. I have the program configured to log on to a local internet packet cluster upon start up. However when starting up the program this morning I received the following error message "Network Error 10061 Network Error connecting to ..... Connection is forcefully rejected"

I tried the usual things such as rebooting, and the internet connection through AOL seems ok. I also tried connecting to another cluster but got the same message.

Any ideas?

GM Dom;
I had exactly the same problem abt a year back. Somewhere I have the emails Mike and I exchanged over the errors. I think it's on a different computer, so will have to go boot that one up and look at the files which I'm sure I still have. So hang in there. In the meantime Dom, if memory serves me correctly, the term 'forcefully rejected' refers to the owner of the IN spot program. So I think I remember that the problem was eventually with the IN node. Look for another email from me after I read the file about the incident here a year or so back. In the meantime, be sure ur IN connection numerical address has not become corrupted. 73/dx

Hi John,

I've posted beta version 4.39 of XMLog at www.xmlog.com/beta that implements an "Ignore Duplicate Entries" option. As usual it's a good idea to back up your log before doing imports (esp. when testing this new feature).

368. Older DXCC Entities

Yahoo group: XMLog
Date: 2002-04-16 02:29:48 UTC
From: Kevin Nathan
Topic: 368 Message: 368

Hi All,

I have a question regarding DXCC entities which no longer exist. I recently received a big box of older cards which have been hanging around the bureau for some time. These include cards from places such as the German Democratic Republic, Czechoslovakia, the Soviet Union and so on. How do I note these countries in the appropriate area in xmlog? Especially, where the OK prefix was valid for the old entity as well as the Czech Republic.

Thanks and I look forward to the answer to this one. 73

Hello Kevin,

At the end of the help file section on "Importing and Exporting Log Entries" there's some info on how to handle imports of QSOs for deleted countries. The strategy is to select the 'mis-guessed' QSOs using a date range and prefix and then using the "Edit/Change Prefix" menu item (be sure to change "Selected Entries" rather than "All Log Entries!). When hacking like this it's probably a good idea to make a backup of your log file first.

From: w1ect
Topic: 368 Message: 373

Hi Kevin,

For a bit of info on importing old logs that contain QSOs for deleted countries check the end of the of the help file section "Importing and Exporting Log Entries. The basic strategy is to select QSOs from your log using search keys for the date and prefix and then using the "Edit/Change Prefix" menu item. When using Change Prefix be sure to pick "Selected Entries" rather than "All Log Entries"! When doing this kind of hacking it's a good idea to make a copy of your log file first.

375. Update fields from Callbook

Yahoo group: XMLog
Date: 2002-05-04 23:21:24 UTC
From: Tom Schaefer
Topic: 375 Message: 375

Is there a way to apply the callbook fields to the whole log. I had imported some entries via ADIF, and I want to update the callbook fields like address, state, etc.

Thanks,

Tom NY4I

376. Setting #HIM

Yahoo group: XMLog
Date: 2002-05-05 00:58:52 UTC
From: Tom Schaefer
Topic: 376 Message: 376

I know that single clicking on a call int he packet sets HIM, but if I right click and select "Start a log entry", it does not set HIM to that call. Would it make good for a better process flow if starting a log entry and expecially saving a log entry automatically set HIM? I know this is used for CW and packet and maybe it would be a problem for CW. If so, perhaps another macro of packetHIM or something like that.

Also, imagine the following flow. I see a spot in the cluster, I right click the call and start a log. I then log the contact. Before I can click on another spot, I need to press STOP editing in the log or it says another log entry is in progress. Would it make sense for the second right click in the packet window to not ask about clearing the log entry especialy since nothing has changed but the edit defaults.

Thanks,

Tom NY4I

Hi Tom,

Sorry, there's no way to update multiple entries. However the current beta version at www.xmlog.com/beta has a feature that allows you to set default field values used during imports and this includes setting fields from the callbook. Perhaps you have a backup of your log before the import or you can select/delete the new entries and re-do the import.

> not set HIM to that call.

This would be an simple change but I'm not sure why you're interested - where are you referencing #HIM after doing the "Start Log Entry for..."? By the way you can also set #HIM with a single left-click, this was the original way it was set if you didn't want to go through the menu selection.

> Also, imagine the following flow. I see a spot in the cluster,
> I right click the call and start a log. I then log the contact.

Not sure what you mean here - If you right-click and choose "Start Log Entry for..." you can't start another until you've added the newly created entry. Even if you set most fields using default values you might want to add IOTA, QSL Via info, etc. Perhaps I could add a "Create Log Entry for..." entry to the pop-up but that seems a bit subtle (and would die for most users since they don't have enough defaults set to create a valid log entry).

Thanks for the replly.

When I run across a station and add him to the log, I then want to send a spot. Him does not get set automatically as a function of logging the station. Is there another way to do it that I am missing.

Thanks,

Tom

382. Beta Bug?

Yahoo group: XMLog
Date: 2002-05-07 06:19:44 UTC
From: Tom Schaefer
Topic: 382 Message: 382

In version 4.41, I right clicked on the packet spot (in the packet window) for K1B to start a new log entry. In the log entry, I right clicked on the country field and select KH1 from the list. After I saved it, I right clicked on the call in the packet window and displayed all calls for the entry, and it showed the country as a W. If I then go back and change it by double clicking on the country field in the log, I select KH1 and it changes. Incidentally, I do have Verify Country guesses checked, but I do nto get the dialog to confirm.

Hi Kevin,

The TS-2000 should work ok with the generic Kenwood setting. Just be sure you match the baud rate selection with the rig's setting.

Hi Tom,

I was't able to reproduce this problem...

The reason you didn't get the "Verify Guesses" dialog was that since you had explicitly set the prefix/country this didn't count as a "Guess".

You should also take advantage of the "DX/Show Callsign List" to associate calls like K1B to the appropriate country. Whenever I browse a DX newsletter and see a listing for a 3D2, ZK1, JD1, FO0, VP8, antarctic or any call that can't be reliably guessed I add it to this list.

Mike - W1ECT

> In version 4.41, I right clicked on the packet spot (in the packet window) for K1B to start a new log entry. In the log entry, I right clicked on the country field and select KH1 from the list. IF I have verify guesses turned on and I do not select a prefix, is there any way it would not show. Perhaps the option to fill fields from the callbook prevents guesses. I have the option selected and it has not asked to verify any item. I thought it used to ask to verify everything.

Thanks for the tip on the callsign list.

73,

Tom

Hi Robert,

I think the problem is that if you are running the Pegasus front panel software from your PC the COM port has been opened by this software so this means no one else (like XMLog) can access the port to send commands.

Hi Tom,

You're right - somehow enabling the defaults is causing the Verify Guesses option to be ignored. I'll fix this in the next beta version.

392. Internet call server?

Yahoo group: XMLog
Date: 2002-05-08 23:11:55 UTC
From: Tom Schaefer
Topic: 392 Message: 392

Mike,

What are your thoughts on using Internet call servers versus the CD? I know you have expresses some reservations about QRZ in the past, but I would be more than happy to write a DLL for any server you like. The DLL would be yours to use as you will. I presume a DLL would be good for you to call. It would be a nice feature to do callsign lookups from an Internet server. You could even add QSL manager to it. I would imagine on the edit defaults there would be an option to fill fields from either the CD or the Internet.

Thanks,

Tom NY4I

What kind of rig?

Does it happen all the time?

Can you click on a frequency in the spot window and set the rig?

Are you using VFO A or B?

In the interest of saving someone else the same
aggravation that you went through could you be more
specific about how you corrected the problem.

Thanks!
John

398. Re: [XMLog] Found Problem with Rig Not Getting Frequency

Yahoo group: XMLog
Date: 2002-05-09 06:14:55 UTC
From: Kevin Nathan
Topic: 396 Message: 398

Yes, it is menu number 47 which is the communications speed for the internal TNC. I had it set for 1200 for talking to the packet node and needed to set it to 9600 to speak to the radio. I will look to see if I can reset some things to get them to match. Take care and 73.
Kevin, K7RX :)

399. Still Having Problems with Xmlog and TS-2000

From: Kevin Nathan
Topic: 399 Message: 399

Hi All,

My problem seems to be back. I have all parameters set to 9600 anywhere I can see them and am still getting the response:

can't get frequency/mode from rig
bad format in rig response length

Help please. Thanks much and 73.
Kevin, K7RX :)

400. keeping NILs in log

Yahoo group: XMLog
Date: 2002-05-12 16:55:26 UTC
From: Steve Litwins
Topic: 400 Message: 400

GM all;
I wonder if anybody knows of a way that NILs may be kept in the log, but kept also from being listed as a statistic? This recently came up in this weird situation. I rcvd a qsl card showing that I was NIL for a Q way back a few years ago. I sent an email to the group saying that I was pretty sure that it was a good Q...wud they pse look some more. They did (look) and I was still NIL...oh well. After a while I removed the Q from my XMLog data to avoid it being kept as a live statistic. Then here comes Murphy...I get a nice letter in the mail with a qsl card for the NIL Q with an explanation of what happened...so now I am in the log, but my orig. Q is not! So...I am wondering if there is a way to list the Q in the log but not do a stat search on it so it is not included as a worked but not qsl-ed...any ideas?...73/dx

Hi Steve,

Since it's not a NIL anymore it seems like you should just go ahead
and re-enter the QSO from scratch. If you don't know the original QSL
Sent date you can use ? for this field.

Hi Mike;
Guess with all the words, I confused u. That was not my point...I can do the qso info agn for the example given. What I was really after was a suggestion to u as to a button (if u can do it) that wud, if checked, keep the Q from becoming a log statistic, but wud still keep the qso in the log for whatever reason one wud need. Not a real pressing issue...73/dx

From: jagius@sybase.com
Topic: 400 Message: 403

I had this same need and what I do for NIL, I put a W/ in front of the call sign.
Thus if the call were f5rty I would change it to w/f5rty and put NIL in the QSL via field

There are few of them and then they do not show up in any of the DXCC stats.
They do not affect the W stats because they are easily recognizable and don't have any state
info, etc.

If it is a W NIL, I get rid of all of the county and state info and put NIL in the QSL via field.
Without any info It does not show up anywhere except in W qso worked but it is
irrelevant at that point . If a card comes in later, fill in the data but the
basic date and time and mode are already there.

I have 3 thus far and seem to be doing OK..
It's not perfect but it works.

OK Steve,

Theres a couple of ways you can keep the QSO out of the stats. For DXCC you can set the Prefix to ? (or set the State to ? for WAS or Zone to ? for WAZ). You can also set the appropriate submission tracking Rejected date to ?.

Mike

Kevin,
I have been having this problem intermittently for a long time. I
hit Ctl-A and get the error mesaage you get. My work-around is to hit
stop after getting the error message, then hit Ctl-A again. It then
works for the rest of the session. I assumed it was someithing not
quite getting initialized.

73's,
Jim KD6NA

411. Testing of QRZ callsign server interface

Yahoo group: XMLog
Date: 2002-05-18 20:16:51 UTC
From: Tom Schaefer
Topic: 411 Message: 411

If anyone is interested (and has a full-time Internet connection), I need a few more beta testers of an interface I wrote to QRZ's online callbook server. Basically, the way XMLog accesses the QRZ CDrom is via a DLL called QRZ32.DLL. What I have done, it to write a new DLL called qrz32net.dll that can be copied over the QRZ32.DLL. Instead of looking for calls on the CD, it will go to the QRZ callbook server at www.qrz.com. I have done extensive testing on this including importing a 700 log ADIF file and it seems to work great.

If you do not mind testing beta software and want to test this out, please follow this procedure EXACTLY.

1. Close down XMLog
2. Most important, now; right now, go into your XMLog directory (normally c:\mlog) and copy qrz32.dll as qrz32sav.dll
3. Download the new DLL (http://groups.yahoo.com/group/XMLog/files/qrznet32.dll) to your XMLog directory.
4. Copy the DLL (see the previous email for a link to it) as qrz32.dll (COPY qrz32net.dll as qrz32.dll). If the copy asks to confirm the overwriting of the existing file, tell it yes (You did back it up, right?)
5. Start up XMLog
6. In the Log window, go to the Options Menu and select Callbook Setup.
7. Under Callbook Location, just type C: (The actual letter does not matter but you need the colon).
8. Under Callbook Type, select QRZ II.
9. Optionally, check Use Callbook for Locations (I run this way but you may not want to).
10. Click Save
11. Just to be safe, shutdown and restart XMLog

Now, whenever the program tries to use the callbook, it will go to the Internet connection. If you are using a dial-up, it will be a bit slower, but still usable (I'm guess there because I do not have dialup. Let me know if it is usable if you have dialup).

Please send reports of its use to me directly at ny4i@.... I do not want to tie up the XMLog list with this type of information. If you have questions on setting up XMLog for the QRZ xallbook, by all means use the XMLog list.

Thanks and good luck,

Tom Schaefer, NY4I

PS If anyone you know, or even you also use another logging program, this may not work. It only supports the mailing label format from the DLL right

now. Yoou are welcome to try it in another loggin progra,. I would be interested in how it works there as well.

From: John P Smith
Topic: 411 Message: 412

Tom,
I have a 56k dialup and it works just fine; not
greased lightning by any stretch, but very usable.

73 and thanks!
John

Hi Tom,

For some reason, I am having a heck of a time logging into yahoogroups through the web since I signed up via the listserv. Would you please send me a copy of your file privately.

thanks much and 73.
Kevin, K7RX :)

414. The 'notes' field gets saved in ADIF file

Yahoo group: XMLog
Date: 2002-05-19 18:34:51 UTC
From: zamba0321
Topic: 414 Message: 414

Hi Mike,

I noticed that the 'Notes' field gets stored in the ADIF file.
So when I upload it to eQSL.cc it gets printed on the QSL card.

I often use the notes field to note the antenna or rig that the other
station is using. So I don't like this printed on the eQSL.

Is there any way not to include it. Or should there
be an 'internal note' field and and 'external note' field that
gets stored in the ADIF or printed on the QSL label ...

thanks

de K6TE

415. Re: The 'notes' field gets saved in ADIF file

Topic: 414 Message: 415

Hi - You have to remember the primary purpose of the ADIF file is not to provide data for eQSL but to allow exchange of data between log programs. This means that no data should be exempted from the file or it would get lost in the transfer. Since an ADIF file is just a simple text file it can be edited with NotePad, WordPad, etc. and you can manually remove the notes fields before you send it.

417. would be helpfull to have sequence number

Yahoo group: XMLog
Date: 2002-05-22 02:50:42 UTC
From: zamba0321
Topic: 417 Message: 417

Howdy Mike et al,

It seems it would be helpfull to have a sequence number for
each log entry. This way when I do a search on a specific field,
I would be able to browse the log back and forward
from that entry based on the sequence (i.e based on time and date)
relative to that entry.
It seems right now I can only browse through all the search results.

Perhaps theres anoter way to do it ...

I'm not exactly sure what you want, but I went looking
in my log for 3Y0PI just for fun. I discovered it was
1994 when they were on the air which was pretty
amazing; seems like only yesterday. Anyway I had that
QSO on Feb 3 1994. If I wanted to see all my QSOs in
that time frame...not necessarily just 3Y0PI I could
go to the search screen and enter:

>=02/03/94,<=02/28/94

and discover that I had 74 QSOs during that time
frame, a number of which were with 3Y0PI.

Is that kind of what you're trying to do, or did I
miss the mark?

Hi John,

indeed that is what I'm trying to do.
Just wondering if I could go to the QSO before the one
I searched without having to enter a new search string.

When I just browse the log, I do see 'entry x of y' displayed.
So if I get the log entry number for the item I searched, I could
perhaps just go to that specific entry number and then hit the
'previous' or 'next' buttons ...

Well I'm glad I understood your question.
Unfortunately I don't know of any way to go back one
before the QSO I asked for easily.

Good Luck. Let us know if you find a way because
you're probably not the only one with that question.

I keep my log in date time order - which of course can be changed -
but I find it easy enough if I know the date, to find the QSO using the
slider at the bottom of the screen
after selecting all.

Then you can browse either way quickly, either with the mouse or with the
arrows.
My log is about 8000 entries.

This will work with any other order and then the next or previous will be
in the order of the sorted file.

Topic: 422 Message: 422

Is XMLLog suitable for contest logging? Would it be good for field day? I am interested in dupe checking and basic stats (states/countries, regions, goals) on a contest-basis (sometimes).

If not, can anyone recommend free software that would meet my needs (contest AND regular logging) ?

tnx es 73

Topic: 422 Message: 423

Hi,

XMLog wasn't designed with contesting in mind. A few folk use it when they are in a contest for a few contacts but most (myself included) use a logger like WriteLog or CT and then import the QSOs into XMLog after the contest is over. Some programs try to be both a contest logger and a day-to-day logger but really don't do both very well. Best to invest in something like WriteLog ($75) and then you can have the best of both.

Hi,

There's no way to move outside the results of a search without doing
another search. The sequence numbers displayed after a search are
just relative numbers for the records returned for the last search.

I haven't found XMLOG to be very suitable for
contesting. For Field Day software I've used WR9R's
product many times very successfully:

429. Re: [XMLog] Testing of QRZ callsign server interface

Yahoo group: XMLog
Date: 2002-05-24 19:02:24 UTC
From: Raymond Rowe
Topic: 411 Message: 429

Hi Tom,

I downloaded the DLL file and using a dial-up connection have not had a problem. It is a little slow but not enough to worry about.

The problem I have noticed is:

1) I am entering a lot of calls manually (191).
2) When I enter a callsign there is a delay between each character before it shows in the box.
3) During this time the dial-up icon on the task bar is indicating it is doing something on the Internet.
4) From the time I type the first character of a 4 character callsign it take 36 seconds for the cursor to return to my control.
5) If I do a Ctl-F the address info appears instantly.

Is it looking up each character of the callsign as it is put in the box?

Not related I don't think, but when I put 100 in for the power an error message flashes telling me "Power must be 1-1500, use ? for unknown".

Have you considered the following:

1) For the purpose of mailing labels. For those QSO that say "QSL via another callsign", Being able to enter the callsign in the window that you already have for that purpose and a switch that if you want would put that callsign address in the address section.

2) A button for split operation that would bring up another window for the frequency.

3) Having the frequency window continuously polling the radio. It appears now that it looks once per callsign.

I don't know if I have something set wrong or not, but everytime I run XMLog I have go to the Options-Log Options,QTH and press SAVE for it to hide the awards part and it load my selected log. The path for the log is entered and the awards box is not checked.

Last but not least, I still think it would be great that whatever method you are using, when you enter the callsign all info should be entered automatically. If some people don't want it, install a button or check box to turn that function off.

Thanks for your help and a fine program.

I noticed the delay as well.

Mike - Is the program trying to lookup the call as each letter is entered?

Thanks,

Tom NY4I

Hi Ray,

> Is it looking up each character of the callsign as it is put in the box?

Yes, it's recalculating the bearing. Go to the callbook setup options and disable "Use callbook for locations". This option should only be set if you have your callbook installed on your hard disk.

> Not related I don't think, but when I put 100 in for the power an error message flashes telling me "Power must be 1-1500, use ? for unknown".

Couldn't duplicate this problem.

> For the purpose of mailing labels. For those QSOs that say "QSL via another callsign", Being able to enter the callsign in the window that you already have for that purpose and a switch that if you want would put that callsign address in the address section.

Double-click on the callsign in the QSL-Via field and then use the "Copy address to log" button.

> I don't know if I have something set wrong or not, but everytime I run XMLog I have go to the Options-Log Options,QTH and press SAVE for it to hide the awards part and it load my selected log. The path for the log is entered and the awards box is not checked.

The checkbox never actually gets set with the checkmark - just click on it until you get the info displayed that you want.

> Last but not least, I still think it would be great that whatever method you are using, when you enter the callsign all info should be entered automatically. If some people don't want it, install a button or check box to turn that function off.

Use "Edit/Edit defaults for new entries" and enable "Get info from callbook" then use "Edit/Use defaults for new entries".

434. Internet Callsign Server DLL

Yahoo group: XMLog
Date: 2002-05-28 08:34:32 UTC
From: Thomas M. Schaefer
Topic: 434 Message: 434

I have updated my DLL that is a drop-in replacement for the QRZ, Buckmaster, and Flying Horse DLLs that instead of looking up calls on a CD-ROM, it goes to the Internet. The DLL basically is copied as whichever DLL you want to replace, and your logging program would call it instead of its normal DLL. WHere the normal DLL expects to access a callbook CD-ROM, mine goes to the Internet to get the Information. If your program supports the Buckmaster interface, I suggest using that one as it best supports Grid. Note that the online callbook servers are not as through for non-US calls, so if you use Flying Horse, you might want to stay with that.

A future version will access the CD first, then if that is not present, go to the Internet, so you get the best of both worlds. Instructions are included in the ZIP file. If you do not feel comfortable moving a DLL around in Windows, I would suggest careful consideration before using this.

This DLL is freeware and you are responsible for its use.

I have tested this with DXKeeper and XMLog. It will not work with Logger as it is still calls the old interfaces. I have not tested this with other programs so if you have friends that use other ones, I would be interested in how it works.

Access the DLL here... http://www.xmission.com/~toms/software/qrz32net.zip

Please send questions to Tom Schaefer, NY4I at ny4i@...

From: jagius@sybase.com
Topic: 435 Message: 435

Help with spots

I can't seem to get the ignore spot options to work whether I use bands, frequencies, vhf.

The following examples do not work for me to ignore spots:

to ignore spots on 2 and 6 .....2 6
to ignore all above 10M.....vhf or VHF
to ignore 15 and 20 M 15 20

I have experimented extensively with using packet connecting through the internet
and have also tried it via tnc and regular 2 meter packet cluster.

Can anyone determine if I am doing something wrong or has anyone got this to work.

Of course, it works if you use the filter option on the packet cluster server (SET/FILTER) but I don't think that it is the
intent of the XMlog ignore option. - It would then be useless.

I am using xmlog 4.42

Hi Joe,

The spots themselves don't get ignored - they are still displayed in
the Packet window. Setting the various 'ignore' options only disables
the cw/voice alerts that would be given.

Hi Tom!

Well, I've been using your callsign server (and no other) for several weeks now and have had no problems.
Let me know if you need any particulars.

73 de W2GERry

----- Original Message -----
From: Tom Schaefer
To: XMLog@yahoogroups.com
Sent: Saturday, May 18, 2002 4:16 PM
Subject: [XMLog] Testing of QRZ callsign server interface

If anyone is interested (and has a full-time Internet connection), I need a few more beta testers of an interface I wrote to QRZ's online callbook server. Basically, the way XMLog accesses the QRZ CDrom is via a DLL called QRZ32.DLL. What I have done, it to write a new DLL called qrz32net.dll that can be copied over the QRZ32.DLL. Instead of looking for calls on the CD, it will go to the QRZ callbook server at www.qrz.com. I have done extensive testing on this including importing a 700 log ADIF file and it seems to work great.

If you do not mind testing beta software and want to test this out, please follow this procedure EXACTLY.

1. Close down XMLog
2. Most important, now; right now, go into your XMLog directory (normally c:\mlog) and copy qrz32.dll as qrz32sav.dll
3. Download the new DLL (http://groups.yahoo.com/group/XMLog/files/qrznet32.dll) to your XMLog directory.
4. Copy the DLL (see the previous email for a link to it) as qrz32.dll (COPY qrz32net.dll as qrz32.dll). If the copy asks to confirm the overwriting of the existing file, tell it yes (You did back it up, right?)
5. Start up XMLog
6. In the Log window, go to the Options Menu and select Callbook Setup.
7. Under Callbook Location, just type C: (The actual letter does not matter but you need the colon).
8. Under Callbook Type, select QRZ II.
9. Optionally, check Use Callbook for Locations (I run this way but you may not want to).
10. Click Save
11. Just to be safe, shutdown and restart XMLog

Now, whenever the program tries to use the callbook, it will go to the Internet connection. If you are using a dial-up, it will be a bit slower,

but still usable (I'm guess there because I do not have dialup. Let me know if it is usable if you have dialup).

Please send reports of its use to me directly at ny4i@.... I do not want to tie up the XMLog list with this type of information. If you have questions on setting up XMLog for the QRZ xallbook, by all means use the XMLog list.

Thanks and good luck,

Tom Schaefer, NY4I

PS If anyone you know, or even you also use another logging program, this may not work. It only supports the mailing label format from the DLL right now. Yoou are welcome to try it in another loggin progra,. I would be interested in how it works there as well.

449. CW from LPT port.....PTT?

Yahoo group: XMLog
Date: 2002-06-16 21:06:55 UTC
From: n7or
Topic: 449 Message: 449

It looks like right now, there is no ptt signal available from the cw interface? I think this is true for both com and lpt types? I have a cw/ptt interface that I use for TRLog, N1MM Logger, and MixW software. I would love to have it be also compatible with XMLog. The way I have the shack wired and the way the FT920 works in the current config. causes this to be needed. I use the rear port for computer CW/PTT and the front port for the paddles. As of now, the only automatic way to get the rig to go into TX is by using full qsk. Vox does not work with the rear CW/PTT port. I personally do not like full qsk, while some do, I am sure.

Bottom line, for Mike: Can you add this feature? It would use pin 16 of an LPT port, pin 7 of a 9 pin COM, and pin 4 of a 25 pin COM.

I hope many others would find this useful, I know for me it would help to simplify and standardize the shack.

73, and Thank You, Mike, for considering. Craig - N7OR

I did not ask him to "mess it up". I asked for an addition. If you have nothing attached to those pins, it will not bother your ct. I can't imagine that ct does not have ptt at least available. Maybe it does, and you are just not using it. Don't assume that I asked for the entire pinout and interface to change, as I did not.

Mike, I can clarify, TO YOU, if you are interested and will consider.

Hi Craig,

I had started to add this feature earlier so I went ahead and finished the job. You can try it at www.xmlog.com/beta

Mike - W1ECT

Well, that is just fantastic. I do, however, notice that changes.txt
mentions COM but not LPT. I will install and test this weekend and
let you know, thank you.

454. Help!! Unwanted boxes

Yahoo group: XMLog
Date: 2002-06-19 04:08:16 UTC
From: CyberGeezer
Topic: 454 Message: 454

Some boxes have now appeared at the bottom of my XMLog window (DXCC, WAS, and WAZ, each with ACCEPT, REJECT, and SUBMIT fields).

I don't know what I did to invite them there.

I don't know how to tell them to go away.

I can't operate XMLog with them there because they force needed buttons off the bottom the screen.

First of all look under "Options > Log options" and uncheck the

always show awards tracking - this will remove the fields.
if addresses lines are showing, uncheck that box also and
if you uncheck show all qso fields also
you will be back to normal.

On the normal screen, there is a button on bottom left which will navigate
you
through all of the fields.

Thanks, but that's one of the boxes that was forced off the bottom of the screen.

It was acting as if I had checked all three of the "Always Show" buttons in LOG OPTIONS (I had not).

Finally cleared it by going into LOG OPTIONS and clicking SAVE without changing anything. Weird.

That box only shows up if all three "always show"s are NOT checked.
You may have inadvertently saved all three and when you saved with them
blank, it cleared it up.

459. Install from floppies

Yahoo group: XMLog
Date: 2002-06-19 18:38:11 UTC
From: CyberGeezer
Topic: 459 Message: 459

In anticipation of Field Day I'm trying to put copies of XMLog onto two laptops that don't have modems. On my main machine I ran floppies.bat and produced the five distribution floppies.

Tried to install on a Windows 95 machine-- it reports that a:setup.exe is in the wrong format.

Tried to install on a Windows 98 machine-- it reports that it can't find a file named something like stunt6 in c:\windows\temp\

(Running v. 4.19)

Any ideas?

I wouldn't use XMLOG for Field Day...its not designed
for that per the author.

I would instead find a copy of WR9R's Field Day
software.

462. XMLog question

Yahoo group: XMLog
Date: 2002-06-19 20:28:29 UTC
From: Judy & Darrel
Topic: 462 Message: 462

Have had XMLog for about a month now and like it very well. After cleaning up about 6000 contacts from another logging program that I imported and added the '?' in the country field for any contact that I do not want to track everything is working very well. One of the best features that I like is the QSL Card printing and it has printed every card that needs printed so far.

Now my question. I change display to sort by QSO date/time. Put !=? in Country field and = in QSL Sent field to get the contacts that I need to send cards too (oldest to newest). The results are fine except no USA contacts are listed. Does XMLog exclude USA contacts in its search unless a W is put in the country field?

Also while I am at it, I like to track US Islands and prefixes. Is there any future versions with these awards in report form like DXCC, Counties, or IOTA's?

Thanks for a very fine windows based logger.

just = in the qsl field will give you what you want for the most part.
just ? in the country field gives all W
!=? in the country field gives all but W with a couple exceptions.

The sortsand selections are quite complicating in this program and Mike
does his best to keep up with the
fixes but some work arounds are useful to document for additional use.

Topic: 459 Message: 466

Hi - I've found that if you copy the contents of all the floppies
created with floppies.bat to a temporary folder and then run setup.exe
from there this seems to solve problems like this.

As several folk have noted, XMLog isn't much of a contest program.
Our club uses WriteLog which works very well and we have previously
used TRLog and CT which didn't seem to be as friendly to
our computer-phobic members.

Currently there is no explicit window to show previous QSOs but there are a couple of ways to see them without doing a log search.

- Pick "Display/Display All Entries for Call" (Alt-D,C) to get a window with all the entries that match the current value of the Call field. You can double-click on entries in this window to move to that log entry.

- Right-click on the call field. The last 10 entries will show in a popup menu. You can click on entries in this list to move to that log entry.

- If you have a callbook installed do a callbook lookup (Ctrl-L). A list of QSOs for this call will be displayed. Double-click on entries in this list to move to that log entry.

Note that clicking to move to the log entries doesn't work when you are currently editing or adding a log entry.

Hi Michael,

I, for one, would like it if there was some method of telling me I had worked a station before. How difficult would it be to have Xmlog get his old information like name and the like and filling those blanks leaving blank things which might change such as date, time, freq, rst, etc?

thanks much and 73.

Kevin, K7RX :)

472. double click on call does not show country anymore

Yahoo group: XMLog
Date: 2002-06-29 18:29:37 UTC
From: zamba0321
Topic: 472 Message: 472

Hi,

I noticed that with version 4.44 it does not show
the country anymore when I double click
on a callsign either in the log or packet window.
I think it used to show that where it shows the heading and distance.
That was usefull when the call did not result in a match in the
Callbook. At least we could see which country or DXCC entity
the call belonged too ...

thanks
de K6TE Wim.

Topic: 472 Message: 475

I tried it here and the Callbook Lookup window still has the country info in the window's caption. Does the info still show up in caption for the Log window when entering a new call (and in the Packet window's DX/Check Call+Prefix window)?

Hi Mike,

The lookup function (F4) does have it correctly.

But when I double click on a call in the packet window
it does not show the country. Example I double click
on CY9DH, it shows in the window caption:
"CY9DH - Heading 57, distance 3157 miles"

When I enter the call in the logbook, I do get the country
"CY9DH (St. Pail I. - 57/3157 miles)"
same for F4 callbook lookup
I do have the radio amateur callbook cd installed on the harddisk.

Hi John,

The backups are just straight copies of the log so you can actually open them directly from XMLog or copy them to your normal XMlog install directory (possibly renaming it to replace an existing log file).

I noticed with the "DXMON" software they have a feature that allows you
to hit the online qrz.com look up by clicking the DX callsign.
Has there been any thought of perhaps adding that feature to XM Log ?

73, Bob K3BM

Another Pegasus owner sent me a copy of the Programmers Reference Guide. I think we decided the problem here is that the normal Pegasus PC interface program opens the serial port to control the radio and at that point any other program (like XMLog) isn't be able to access this port to send commands as well.

Hi Bob,

Very strange - I see in the changes.txt file that I supposedly added support for the FT-747 way back in version 3.00 but looking into my archives I don't see any code there... I still have the FT-747GX CAT documentation that was sent to me by KI8EE so I'll go back and see how much of a job adding it (again?) is.

Topic: 493 Message: 494

Hi Wim,

First, are you familiar with how the normal packet window flags
things? The QSL status (+ for worked and * for outstanding) is
displayed for each band/mode in a seperate line after the spot. This
status is not updated automatically as you update your log - you have
to periodically use the "DX/Update Packet DXCC Status" menu item now
and then after you've made changes.

Now, this worked/outstanding info doesn't show up as part of the
callsign in the packet spots window but if you move your mouse over
any callsign you'll see the QSL status info displayed at the bottom
with the frequency, spotting station, etc.

Hope this is what you need...

Hello Mike,

yes indeed the status line helps a lot.
I guess I'm struggling a bit to detect if I worked that very same
station before, when I enter a new QSO for the same call
it doesn't tell me I worked that station before, nor does the status
line show me that. It only shows if I worked that DXCC entity before.
It would be nice to show if that very same station has been
worked before. Perhaps another symbol like the + or *
could show that that station has been worked before, perhaps
a pound sign #.

Also some indication when I enter a new log entry that shows that the
station has been worked before would help

just my 2c, it's a great program !

The reason there is no separate country is because it's not a separate
country. It counts for Antarctica.

Hi Kevin,

XMLog is guessing Spain from /ANT since Spain has the prefixes AM...AO. To set the QSO to Antarctica change the call to RW1AI/KC4 or leave it as RW1AI/ANT and explicitly set the prefix field to KC4.

From: Kevin Nathan
Topic: 504 Message: 504

Hello All,

This morning I worked the International Space Station on packet. I have two questions resulting from logging this contact. first, is it possible to add a country and prefix to the countries list? Something like:

RS0: International space Station

Second, in mode, what does one put for packet, just FM or FM Packet?

I really appreciate feedback on both of these. Thanks to all in advance.

Hi Nelson,

The address info for labels comes from the Address fields in the log entry not from a callbook lookup. There are several ways to move the address info from your callbook to a log entry. The easiest way is to use the "Edit/Set Fields from Callbook" menu item (shortcut Ctrl-f). Or you can right-click on one of the Address fields and pick "Set Address from Callbook". Or you can use the "Edit/Set+Use Defaults for New Entries" menu items to set defaults so that the callbook info is always automatically added to each new log entry (see help file for more info on this feature).

Hi Kevin,

XMLog's country list is used for the DXCC award tracking so it's kept up to date with the ARRL's list and shouldn't be diddled. Since the ISS isn't a legal country for DXCC you should set the prefix to ?.

I'd go ahead and set the mode to Packet (you can add a comment in the Notes field that you were using FM).

Hi Jim,

There currently is no way to add custom fields. The best way to record your 10-10 info would be to add it to the Notes field in the form "10-10: 1234" or with some other unique prefix so that you can search for records with 10-10 info with a search key of "=*10-10:*".

While reading about the above problem, I ask my son (soon to be a ham) about this. He is a network administrator for a local large school system and he said: Windows NT permissions in XP are locked down by default drastically as compared the 2000, 98, etc. They must be manually unlocked for the program to work. He has had this problem with a lot of software. He also suggested try to run it under Compatibility Mode. Check this info out on the Microsoft website. I hope this might give someone a clue as to what is going on. I know I don't have a clue.

Thanks for the feedback. I'm glad to hear that it does install OK on some XP systems. Strangely enough they haven't had problems installing previous versions like 4.35 on the same system. I've scrutinized the changes between the two versions but there's nothing I can find that should affect the install process (setup.exe and setup1.exe are unchanged). For the time being I don't have access to any XP system so this makes debugging the problem difficult.

Maybe it isn't your program that has changed. Maybe it is something in
XP that has changed, like the Service Pack, or some other update?

From: Craig - N7OR
Topic: 519 Message: 519

Whenever someone spots the current CY0, I show it as only a band/mode need. I thought I had never worked it. A quick search shows that I have worked VX9DX in a CW contest, and it is counting as CY0. Not sure why. I looked in DX|CALLSIGN LIST, and there is no VX there. These kind of errors are a bit troubling, as I imported 1200 last 10 meter contest, and I sure didn't stop to verify every country. :-) Different if you are just entering a single dx q by hand, you can verify it easier. Is VE9 (vx9) ambiguous, or is there a bug?

Thanks, Craig - N7OR

Here, I think, is the answer; At one time, VX9 was used on Sable Island.

http://hamgallery.com/qsl/country/Sable_Island/vx9a.htm

I think, at least for me, since I had a similar problem, the simplest way to correct the log is go to the log and search for the call VX9DX and manually correct the country to VE. After that click on update packet DXCC status. Then close mlog and use any simple text editor, i.e. notepad, and delete VX9 which is found on the line with the CY0 information in the prefix file, in the mlog directory.
GOOD LUCK

P.S. I did some checking and mlog is not the only logging program to show VX9 on Sable Island.

Hi Craig,

It seems that at some point I associated VX9 with Sable I. and VY0
with St. Paul I. Not sure where I got this info, probably from an old
CTY.DAT file. I'll remove these associations from the next version
but in the meantime you can remove them yourself if you're willing to
edit the Prefixes file directly, here's how:

- Exit XMLog
- Go the the XMLog install folder (usually c:\mlog)
- Open the Prefixes file with an editor like NotePad or WordPad
- Change the line for Sable I. from:

CY0,VX9,!,
to:
CY0,!,

- Change the line for St. Paul I. from:
CY9,VY0,!,
to:
CY9,!,

Date: 2002-11-22 10:46:26 UTC
From: n5pht
Topic: 525 Message: 525

Hi,

The search feature will work for this. For example, if I search and
have the following entered

in the date: 3/10/02
in the time: >=1800,<=1900

The search will look for any log entries on 10 March 2002 between
(inclusive) the utc hours of 1800 and 1900.

You could also search for a date range and a time range:

in the date: >03/10/02,<04/01/02
in the time: >0200,<0600

NOTE: Do not leave a space after the comma.

This would search for dates after 10 Mar 02 but before 1 Apr 02 and
between the utc hours of 0200 and 0600.

Hope the above helps - it works that way on my machine.

528. Run-time error '6'

Yahoo group: XMLog
Date: 2002-11-23 06:29:03 UTC
From: witstock7
Topic: 528 Message: 528

In trying to keep up with activity in the CQ contest I am monitoring the packet cluster. After a few hours of operation I have gotten the error message <Run-time error '6' Overflow>. This caused me to get the "fatal error" message and told me I had to shut down the program. I then went into the history set-up and doubled the number of lines to be saved. Shortly after this the same error messages appeared. Next I opted to not have any history saved but I still got the same messages a short while later. Does anyone have any thoughts on what I must change in order to regain use of this great program??

TIA

Hi guys,

Recently read about this program on the MixW reflector and decided to give it a try.
Have already set up a QSL label to print with a laser printer directly to card. This took some time, but when I found how do it the rest was easy.
When replying to Bureau cards, I most of the time include confirmation to the same station to other QSO's that we have had. Find it too many keystrokes to get to the next QSO. Is there any simple way to have less keystrokes. I have used DX4WIN for several years, but needed support for the new data modes hasn't been at its best there so I´m looking for a new looging program, and think this could be a winner. To go between different QSO's with the same station DX4WIN use up/down key.

Topic: 529 Message: 530

Hi Seli,

You can use the Ctrl+left/right arrow keys to move through the selected entries (Alt+left/right arrow works as well). The current beta version in www.xmlog.com/beta also supports using the mouse wheel for moving through the currently selected entries.

To narrow down the selected entries to QSOs with one station that haven't been confirmed do a select with:

Call: whatever
QSL Sent: !=
QSL Rcvd: =

This will match log entries that have the Sent field filled in but have nothing in the Received field. See the "Searching the log" section of the help file for more info.

531. Printing labels - A subtle (?) problem

Yahoo group: XMLog
Date: 2002-12-02 22:31:43 UTC
From: Mike McAmis
Topic: 531 Message: 531

I just recently switched to Windows XP and when I tried to print my first bunch of QSL labels I had a problem that took me a while to figure out...

I have a old HP printer that when left to it's own devices will stack the printed pages in reverse order. On XP the print spooler tries to be clever and prints the pages in reverse order so that the first page is on the top of the stack. Nice feature, eh?

But when I print my labels I use the feature that allows me to specify the starting column/row so I can use a partially used sheet as my first page. Unfortunately since the last page was getting printed first this scheme wasn't working.

To fix this problem I had to go to the printer properties page and disable spooling by setting the "print directly to printer" option.

Hi all;
Mike...this is one for u. It is not a biggie, but am posting to let u know it exists if u don't already know or...probably...it is supposed to work this-a-way.
I am using the internet packet spotting screen. I have noticed that sometimes, if a spot is known as needed and shows that way on a previous up-scrolled screen (extended bar...highlight), it will not show as needed the next time it spots. Like right now...9v1yc, who I need on 40, is spotted on 40m cw, but I was not there when the spot occurred so it is way up the screen in the past history. Now...he is spotted again, but the extended bar does not show this time as it did b4 so unless I really looked closely, I wud not know it was one I needed. Is xmlog supposed to do this? Oh...sometimes it does this and sometimes it does not...ie...works like I wud like it to work and always show the extended highlight...73/dx

Hi Steve, XMLog is highlighting the calls that cause alerts. It also makes an attempt to not give alerts for duplicate spots. If the call has been spotted recently and the frequency is the same (or close) no alert is given. I should still highlight these "recent" spots in the packet window - I'll add this to the to-do list.

535. WinKey CW generating device

Yahoo group: XMLog
Date: 2002-12-04 18:30:36 UTC
From: nfivein
Topic: 535 Message: 535

This looks like a possible device to generate CW using W2K or Win-XP. The advantage is that you will not be at the mercy of the multi-tasking nature of these programs, where Windows decides to give it's attention to something else in the middle of a CW transmission. Since it uses standard serial port I/O it should even work with USB to serial adapters (but don't quote me on this!).

It appears to be a very low cost alternative to the W5XD MultiKeyer at $215, which, although that product is a great CW generator, is really designed for Single Op 2 Radio (SO2R) and thus far more advanced than most hams need.

K1EL is offering the 'WinKey' for $30.00 as a kit, but I contacted him and he says he is working on providing an assembled and tested unit as a somewhat higher price of course.

The 'WinKey' would require an enhancement to be made to the logging program, so there would have to be sufficient demand for this to occur.

Here is the link: http://k1el.tripod.com/ and click on "Winkey is HOT".

The funny thing is that when I restarted xmlog and did a sh/fdx
on the cluster, then when I mouse-over the CO/XE1CT call
the status line DID show the right info ...

So I'm not sure in which circomstance the behavior is reproducable ..

I am new to this group and think it is a great way to find out more about this software.

I am using QRZ CD and not sure if it is working right. When I tell it do put the informatin on my log it drops all of it in the address field instead of spliting it up in the appropiate spots. Is this normal?

Also I have notice that I can't get my system to get the call sign in "caps", I have gone it to the section where it gives you that option and checked it.

Many Thanks,

Jim N7VLM 73's

From: Mike McAmis <m.mcamis@valley.net>
Topic: 538 Message: 541

Hi Jim,

The QRZ CD only returns entries as a collection of address lines.
XMLog doesn't currently try to figure out if the first line is
actually a name (or just a PO box number or whatever). In general,
if you use the "Edit/Set fields from callbook" (Ctl-F) menu item any
fields that can be discerned from the callbook entry will get set
(but doesn't overwrite any fields you have already set).

The "Callsign to upper case" option doesn't have any effect while the
call is being typed but the log entry should be being saved with the
call in upper case. I'll take a look at changing this.

543. New PacketCluster spot display

Yahoo group: XMLog
Date: 2002-12-09 17:28:07 UTC
From: Mike McAmis <m.mcamis@valley.net>
Topic: 543 Message: 543

Hi - The latest XMLog version available at www.xmlog.com/beta
provides a new way to display PacketCluster spots. This new "Spots
History" window shows the spots in spreadsheet style - all the info
is arranged in a grid. The display supports all the usual features:
rig control, rotor control, callbook lookups, etc.

The old "Spots Display" window that displays the spots graphically is
still available but has been renamed the "Spots Band Map".

Try it out and let me know what you think.

551. showing previous QSO's for call

Yahoo group: XMLog
Date: 2002-12-14 19:32:00 UTC
From: zamba0321 <zamba0321@yahoo.com>
Topic: 551 Message: 551

Hi Mike,

is it somehow possible to automatically show all entries for call
in the main log window or so ?

Right now when working a station again, it is not very obvious that
he was worked before, unless I specifically ask 'show all entries for
call' each time I add a QSO.Or perhaps a little check box after
the 'Call' field that automatically gets checked and marked 'dupe'
or so...

It would be nice to know right away that a station has been worked
before

thanks

Hey, it worked !
The SSL/TLS-aware Apache webserver was
successfully installed on this website.
If you can see this page, then the people who own this
website have just installed the Apache Web server
software and the Apache Interface to OpenSSL (mod_ssl)
successfully. They now have to add content to this
directory and replace this placeholder page, or else
point the server at their real content.

ATTENTION!
If you are seeing this page instead of the site you
expected, please contact the administrator of the site
involved. (Try sending mail to <webmaster@domain>.)
Although this site is running the Apache software it
almost certainly has no other connection to the Apache
Group, so please do not send mail about this site or
its contents to the Apache authors. If you do, your
message will be ignored.
The Apache online documentation has been included with
this distribution.
Especially also read the mod_ssl User Manual
carefully.

Your are allowed to use the images below on your
SSL-aware Apache Web server.
Thanks for using Apache, mod_ssl and OpenSSL!

Topic: 551 Message: 560

That would be a nice to have feature for me too. Maybe a bullet or
asterisk next to the call as a notification that the call is in the log already
then can be looked up or a separate window. Again a nice to have vs a
"must" have for me.

Also would like a 10-10 number field sometime in the future.

XMLog is a very, very nice program for my needs. Thank you very much Mike!

561. Menu shortcuts on XP (and NT/2K)?

Yahoo group: XMLog
Date: 2003-01-01 15:41:38 UTC
From: Mike McAmis <m.mcamis@valley.net>
Topic: 561 Message: 561

I've noticed that on my Windows XP system that the underlined letters for menu item shortcuts don't show until you hit the Alt key. For example in the XMLog File menu the F isn't underlined but you can still exit by doing an Alt-F Alt-X. Is this something unique to my system, some kind of XP bug, or?

Mike

Hi Eddie,

Thanks for the guidance - Kind of strange that they would make
this "Hide underlined letters for keyboard navigation until I press
the Alt key" feature be the default setting.

566. Beginner's questions

Yahoo group: XMLog
Date: 2003-01-19 23:54:48 UTC
From: n4tn <n4tn@chartertn.net>
Topic: 566 Message: 566

Hello -

I just installed XMLOG today and so far I really like what I see. I have a couple of questions that probably have already been answered somewhere:

- Is it possible to connect to Telnet DX clusters from XMLOG? If so, how do I go about it?

- Is there a means to merge logs or to update one XMLOG log file with the contents of another? F'instance, I would like to keep separate logs for various contests, FISTS contacts, QCWA, etc., etc. and eventually merge each of them into my main daily log file. Can this be done, if so, how?

Any advice will be greatly appreciated.

My compliments to the designer/programmer!

I think this will work-- dummy up some small log files and check it.

--While LogA is open, open the IMPORT menu and export it to an ADIF file (LOGA.ADF).
--While LogB is open, open the IMPORT menu and import LOGA.ADF.
--LogB will then be a composite of its original contents and LogA.

Topic: 566 Message: 568

Hi Don;
I've been using XMLog for almost 10 years now...and still feel like a beginner. I use the DX Telnet feature and it's east to set up. Just go to 'options...packet options and port select' and set up what u want in the dialog pages. Then when u open XMLog, just go to 'options...show packet window' and log on to your favorite spotting group (I use 66.84.210.68...n9bms). U can try that one for a start...there are lots and lots of others. I think n9bms has a lost of all active telnet addresses. This one I use is fairly consistent and up most of the time.
The other question is a good one also. Cuppla hints which u are probably already aware of. Back up your logs to other places. CD-W is the best option for me. I also back up on other computers here at home. It is easy for your log file to get pretty big in a short time if u contest and dx-hunt , as I do...so back up carefully and often. I speak from experience...
For the life of me Don, I can't remember how to merge log files although I have done it early-on. Now, I don't do it any more, just keep separate logs for each event as well as my everyday dx-ing log. Mike, w1ect, is very good about answering all your questions in a timely manner. He has never failed to set me straight, and I have some pretty weird questions. He maintains a chat kinda reflector, avail from the web page which is in itself a wealth of information. I am thinking about how to do the merge you want and if I remember, I will email you. Otherwise Mike will have answered you before I think of it,...hi. He fast! He's also a very nice guy and has never belittled me for any of my stupid problems...hi. GL...73/dx

From: Mike McAmis <m.mcamis@valley.net>
Topic: 566 Message: 569

Hi Don,

> - Is it possible to connect to Telnet DX clusters from XMLOG? If
so, how do I go about it?

Use the "Options/Packet Options and Port Select" and set the port
type to "Internet". If you want an auto-connect when the packet
window opens you can also fill in the cluster address - otherwise use
the "Connect/Internet Connect" menu item. Check the help file info
for more details.

> - Is there a means to merge logs or to update one XMLOG log file
with the contents of another?

You can use ADIF imports and exports to split up or merge log files.
Be prudent and keep backups of your main log file when doing
operations like this (no matter what log program you're using). See
the help file info for details on exporting and importing.

From: Kevin Nathan
Topic: 566 Message: 570

Hi Don,

I can't really speak to the merge issue but I'm logged into a cluster via telnet as I write this. Look at the samples of .nod files Mike includes with this program. they pretty much show how to do it and it's very simple. Mostly, you need to look at the prompts your cluster gives you and put those in as "match statements" and then have the file "send" the required information. The files will make it come clear along with the manual.

Good luck and very 73.

Kevin, K7RX :)

This is a strange case, normally this call would be "guessed" as Johnston I. but if you do a callbook lookup on the call you'll see that it has a U.S. address! This means that if you have the "get location from callbook" option enabled it gets treated as a U.S. callsign. You'll have to use the "DX/Show Callsign List" menu item and add AH3D as correct country to fix this problem.

I'd like to send you something for your logging program, however I know so little about these programs I cannot decide if yours is the one I need to do the automatic logging I'd like to do ... and, in particular, whether I can connect same to my IC-756 ProII without buying something expensive to do it.

Can you give me any idea what it takes and what features I might find in other logging programs, etc.

I just don't know enough about these things.

Thanks.

hmm strange, I do see it correctly in the DX/Show callsign list,
but when I add a new QSO with AH3D it still shows USA.
my version is 4.52

I am using the Callbook, Inc (Horse) and I did set the 'Use locations
from callbook' option. I just tested and this is the cause of the
misbehavior. So I unchecked this option and tried again and
now it's correct, even without entering the call
in the DX/Show callsign list.

I guess I'll just continue with the unchecked box for that then.

thanks for the great program and advise

de K6TE Wim.

Hi -

To add an entry use "File/Add" or control-A, fill in the data, click
the "Add" button, fill in the next entry, hit "Add", etc. When
you've filled in the last entry and clicked "Add", click the "Stop"
button.

Check the help file section "Adding New Log Entries" for more info.

583. Custom QSL Labels - Whoops!

Yahoo group: XMLog
Date: 2003-02-13 18:58:44 UTC
From: Donald Jones
Topic: 583 Message: 583

Maybe I have answered my own question - it appears that the label formatting is applied when the label list is created (maybe). I erased my test QSL label list and created a new one and it picked up my custom format. It looks like I will need to create a new list for each change until I get it right. This is not bad - generally a one QSO list is enough for testing.

Sorry for whining before I had experimented sufficiently!

Did you create a new label file after you set the new
label as the label to use.
I think that if an existing label file exists already,
it exists in whatever format you created it.

Set the new label as the default and go back to the
QSO contacts and redo the "qsl label option for them"
ctr-Q.

Hi Don,

The layout gets associated with the label when it's added to the list. You can see the results by looking at the labels.out file, it's a simple text file. One thing to note though, if you add a label to the list and then you edit the layout before printing those changes will show up when the label gets printed.

Topic: 588 Message: 591

Hi Craig - I've made the changes such that QRZ.COM lookups will set
the State field and the new version is available at www.xmlog.com/beta

I hope to make this version the next "official" version in a few
weeks...

Mike - W1ECT

592. D/M/Y option

Yahoo group: XMLog
Date: 2003-02-22 09:40:56 UTC
From: Dave Sergeant
Topic: 592 Message: 592

I have noticed that occasionally when I open XMLog (v4.46) it opens with the date field set to the default M/D/Y instead of D/M/Y I have in my options. It has to be reset via the options menu. All other options are correctly interpreted and MLog.ini still shows the correct date option. This appears to occur completely at random, though I have a feeling it does it more often just after I have done an ADIF import. By the way I use Windows 98SE.

Perhaps this has been discussed before, but I have only just joined this reflector. And I see there are no archives of mails available on Yahoo.

You will appreciate of course that here in the UK displaying dates in the US format makes the program virtually unusable!

On a related topic, EI5DIs Super Duper which I use for contests did
not include the State field in its ADIF output due to a bug. This has
now been corrected and v9.99 is now available from Paul's web site.

Hi Dave,

I recently fixed a bug where an ADIF import would cause this
problem. If you have been doing any ADIF imports this is probably
what's happening. The latest beta version at www.xmlog.com/beta has
a fix.

Many thanks Mike, now downloaded. Hopefully it will not occur again.

My browser threw a wobbly during the download, I ended up in having
to download it twice.....

596. XMLOG and DXSpider

Yahoo group: XMLog
Date: 2003-02-23 23:45:25 UTC
From: Dennis Jacobson <n6ng@arrl.net>
Topic: 596 Message: 596

Hi all..
I've been using XMLOG for many yearss and have used the W6RFU
node in Santa Barbara with out a problem.
This weekend, it appears they have moved to the DX Spider
format and now I can't get back into the node using XMLOG.

I still can get into other East Coast nodes without a problem.

Is there a reason that XMLOG does not support the DX Spider
format or is there some other simple problem I'm not seeing.

When I try to use the old node address with or without the
7300 port number, I get rejected...

Thanks for any ideas..

Thanks to all for the quick fix...
For any others that might have a simular problem
I thought I would post the results as simple as
it was...
XMLOG uses the convention of using a space between
the IP address and the port number..
So I was trying to connect with
128.111.56.240:7300
which didn't work... when I tried
128.111.56.240 7300 everything worked
just fine..

Thanks again to N7MAL and N6WS for the
quick help.

I agree with Nelson. The QSL label feature is great, but this would really be a useful addition. I have been printing the batch on regular paper for review - this is better than nothing, but the order in which they print seems confusing.

On the other hand, if you do find a duplication there isn't much that you can do about it except to clear the list and re-construct it. I guess it just pays to be careful.

XMLOG is a great program and I really enjoy using it. Many thanks for all your hard work!

After you create your labels --
You can look at the labels.out file. It is a text
file and once you understand its contents, you can
edit it and customize it accordingly.

The labels are printed in alphabetical order by call.

Hi Mike- No idea which one. They all looked ok. I held the delete key
in each field till it was clear and re-entered the data. I probably
fat-fingered a space or other unprintable on the end of one of them.

614. Label question

Yahoo group: XMLog
Date: 2003-03-15 21:42:06 UTC
From: Judy & Darrel
Topic: 614 Message: 614

I am trying to print a label with five contacts. I am using a copy of Demo QSL-5.

The problem I am having is when the prefix changes in the call the program wants to print a different label. I can understand why this might happen but I am trying to send to the same person that is moving around a country and the prefix changes when he moves.

Any way to get around this problem?

The call I am trying to print is HP2/F5PAC, HP4/F5PAC, HP9/F5PAC.

Darrel - WD8ANZ

615. Re: [XMLog] Label question

Yahoo group: XMLog

After reading my question I need to add an additional comment.

I have modified the Demo QSL-5 label to print the call sign at the beginning of each contact instead of on top like the Demo has it.

Thanks

Mike, thanks for the reply to my question. I have played around with the labels some more and if I remove the number from the prefix and put in a couple of spaces I can print what I want and then write in the number afterwards since the number is the only thing that is different in the call sign.

Thanks again for a great program.

Darrel - WD8ANZ

Topic: 614 Message: 618

It seems to me that you can print the QSL for HP2/F5PAC the regular way and then design a new QSL card from MLOG to print text field s in the proper place.
You could place the HP4/F5PAC and the HP7/F5PAC in the address 4 and 5 field and pick them up from there and place them anywhere on the card you want according to your design. Right under the info for the other contacts. Then place the qso info next to them.
In this case you can print a multi qso card and since you know how many qso lines it will print, you can pick up the HP4/ or whatever and place it just before the print area for the qso. Or add a first field in the qso info section and place the locator there.
But you need a different template for whatever you want to do. I have about 12 different templates that I use from SWL not in my log to cards sent to previous owner of my call to regular SWL etc.
I use via manager in the same way and get his call on that way.
I have all kinds of info on my cards using this method.

619. XMLog Updates

Yahoo group: XMLog
Date: 2003-03-24 14:57:11 UTC
From: Jimmy D. Roller
Topic: 619 Message: 619

As a relatively new user, I have a very basic question. In order to update from one version to a newer version, what is required? Is it just a matter of running the install execute and replacing updated files or is there more to it? Thanks in advance for any help.

73/CUL,

Jim, N4IR

624. non standard telnet port problem

Yahoo group: XMLog
Date: 2003-04-16 01:31:56 UTC
From: zamba0321
Topic: 624 Message: 624

Howdy Mike,

my node file for W6RFU does not seem to work.
I get connected but the script does not send my callsign
as the login name.
The issue seems to be with the non standard telnet port.
Using xmlog version 4.56

here's the node file

```
rem
rem Internet PacketCluster at W6RFU
rem
connect 128.111.56.240 7300
pause 1
send #me
pause 2
send sh/dx/20
```

625. Re: non standard telnet port problem

Yahoo group: XMLog
Date: 2003-04-16 13:54:53 UTC
From: Mike McAmis
Topic: 624 Message: 625

I was able to duplicate the problem here. At first I thought perhaps
the 'pause' command might have problems but I changed the
first 'pause 1' to a 'match login:' and it still hangs. It's not
just the non-standard port, a connect to K1XX's DXSpider cluster node
on port 7300 works fine. Time for a bit of digging.

Well boys and girls here's the answer.....

Hi Mal,

The automatic script can still only be setup by the sysop on DXSpider. Let me know what you want to run on login and which nodes you want them on, and I'll add them on the node(s).

Ok, I've found the problem and it was a timing problem that was causing the node file to bail out after doing the 'connect' command. (You can see that there's no node file related message in the status bar when it's sitting there after the connect). I'll post the fixed version in www.xmlog.com/beta in a few days.

629. Formatting of Frequency on Labels

Yahoo group: XMLog
Date: 2003-04-18 17:37:46 UTC
From: n4tn
Topic: 629 Message: 629

Perhaps I have not researched this well enough, and am questioning something that is already there. It would be nice to be able to format the frequency to only one decimal place to save space on QSO labels. The mhz.khz option is not required for most DX QSLing. The Mhz-only option is OK except for 80 and 160 meters where it prints simply 3 or 1 mhz.It would be nice to show them as 3.5 or 1.8 mhz on the labels (and in the log as far as that goes). Is this something that might be changed in the future?

Thanks and 73 - Don N4TN

Hi David. XMLog doesn't have any built-in support for making global changes like those you describe. Probably the best way to do this would be to use Microsoft Access. If you don't have Access installed on your home system perhaps you can do it at work? Since XMLog log files are just MS Access databases you can build queries to select/change records in the log. If you're interested in taking this further let me know and we can work out some examples.

In a pinch, you can export selected records or the
entire file to an ADIF or an Xmlog test file, make the
changes with an editor - be careful how you save,
delete the old records and reimport.

Always save the olf file just in case.

DXKeeper has the ability to modify specific fields of multiple QSOs. You can import an ADIF file, make your changes, and then export an ADIF file for import back into XMLog. DXKeeper is free, and available via www.qsl.net/dxlab .

640. 20 meter freq from Mark V issue

Yahoo group: XMLog
Date: 2003-05-09 15:50:47 UTC
From: Joseph Agius
Topic: 640 Message: 640

Mike,
I am having a problem getting the frequency from 20 M
on my Mark V.

Clicking on a packet screen freq tunes the rig OK.
Starting a new entry from the packet frew is also OK.

However, in edit mode "add new entry" the freq from 20
M is strange.

Examples if the rig is on 14.2000 the freq brought
back to Mlog is 950.846, 14.250 yields 963.647, 14.300
gives 976.445.

I can overtype the frequency to correct it but opening
the edit mode or clicking the field will give the
above results.
I have tried thid in MLOG 4.52 and 4.57 (hoping it
went away)

Any ideas.

Other bands seem OK.

Joe

641. XMLOG with a TT Jupiter?

Yahoo group: XMLog
Date: 2003-05-09 17:05:40 UTC
From: Donald Jones
Topic: 641 Message: 641

Are there any XMLOG users out there who are also using a Ten-Tec Jupiter? I don't understand what is available via the Jupiter serial interface, and I am interested in whether it is possible to obtain frequency and mode information for XMLOG's use. Any information would be appreciated.

Topic: 644 Message: 644

Hi,
Is is possible to search for two modes, i.e. PSK31 & RTTY, as one search? I run version 4.00.
Thanks,
John, G4TGK.

645. Re: [XMLog] Mode search

Topic: 644 Message: 645

I think only if they have something in common.
=*s* will find all modes that are ssb and psk31 for
example.

From: Mike McAmis
Topic: 644 Message: 646

Hi John - Only date fields or numeric fields let you include and's or or's (, or ;) in a search. Perhaps I should add a generic search for 'DATA' for the mode field although that would get in the way of searching for entries that have the mode explicitly set to 'DATA'. Some more thought here is required, I'll add it to the 'to-do' list.

From: g4tgk
Topic: 647 Message: 647

Hi Mike and Joe,
Many thanks for your help. I run PSK31 and MFSK and wanted totals
etc. for the combined digital modes. I enter AFSK in the Mode field
as I don't think it accepts MFSK. However, after reading Joe's email
I can search =*SK* and get the results that I want.
Many thanks once again.
John.

Ok John,
By the way, I am not sure which version Mike put it
into but there is an option to define a new mode in
the edit drop down window.
You can get the latest version at xmlog.com

Good luck

650. XMLOG and LOTW

Yahoo group: XMLog
Date: 2003-05-16 17:43:19 UTC
From: customcompsys
Topic: 650 Message: 650

I tried out the ARRL's beta LOTW last night. You have to convert
your log to AIDF and then use their utility to prepare the file
(compress it?) for upload. Anyway, their utility refuses to do this,
because the BAND field is missing in the XMLOG adi file.
Email to ARRL and return is that the BAND field must be
included; perhaps a later version will be smart enough to infer
the band from the frequency, but not currently.....

Help?

I made a quickie test of the ADI and here's what I found. If I enter a
frequency 14025 MLOG won't add the band. However if I move the decimal point
3 places and make the frequency 14.025 MLOG will add the band.
Here's a copy of my ADI file:

Interesting.... I'll look at that in my files, however I'm not really eager
to go back and add 3 decimal places to a few thousand QSOs I made before I
had a radio that could send them to my computer for me. The LOTW software has
an editor that allows you to edit the .adi file too: is seems to default to a
band of 160m however for any record it finds without the band (and just a
frequency) rather than figuring out that 14 in the frequency is really 20
meters......

I am happy to report that a new beta release of LOTW posted yesterday
now accurately infers and creates the "BAND" field from
the "FREQUENCY" field if necessary and therefore the files can be
prepared and uploaded to LOTW. I tried it last nite with 3K+ QSOs and
it seemed to work fine.

From: Mike McAmis
Topic: 655 Message: 655

The "Band" fields for ADIF exports were added in XMLog version 4.53 so the version available at xmlog.com and xmlog.com/beta both support this feature. XMLog has always interpreted the frequency in log entries as mHz.kHz - if you enter your frequencies as kHz this not only affects the ADIF output but also means that none of the XMLog awards tracking reports will work properly.

I used to use v4.23 and the separate DLL that someone
provided to do callbook lookups on QRZ.COM. Now I use
v4.56, which has that capability built in. It works fine.
(I have a DSL connection.)

661. Error message on 4.57 beta

Yahoo group: XMLog
Date: 2003-05-18 16:28:43 UTC
From: Donald Jones
Topic: 661 Message: 661

I just installed the beta version (4.57) and when I start MLOG I receive an error message:

```
-----------------------
Can't read node file
(52) Bad file name or number
-----------------------
```

I can reply OK and everything seems to run just fine, so this is not an urgent problem. I just wondered if I have messed something up on the install?

Thanks - Don N4TN

Fred,

Thanks for your message. I do not believe I have done anything wrong in this process and this is an easy thing for you to prevent. You made an accusation about reverse engineering software that is unfounded and I would expect someone in your position to have a slightly better understanding of the difference between HTML and coded software. But nonetheless, I must respectfully decline to cease distribution of my software. I will move the source code into the public domain and let the amateur radio community at large maintain it if they so desire on Sourceforge. Additionally, I put terms in my disclaimer that the use is up to the user, not me. I only write software. It is up to you to get your users to comply with a license.

669. searching by band

Yahoo group: XMLog
Date: 2003-05-23 04:32:50 UTC
From: wbfnar
Topic: 669 Message: 669

Hi All,

Bit new to XMLog, but I do try to read the help files before coming here, honest. Puzzled by how to do searching, in particular by band, doesn't seem to work as described in the manual.

From what I understand if I want to search by freq, then I hit the Select button in the log window, fill in one of the fields above, in this case Freq (good so far?) with an exact match or one of the special strings (such as MHz or band name), then hit Search.

However, trying either MHz or one of the band names (e.g. 20m) brings up nothing. Yes, I have entries corresponding to the bands I'm searching for! :)

I use a KHz format for my frequencies, could that be what is screwing me up? For instance, I use 7055.2 instead of 7.0552.

TIA,
Casey, KS7J

Tom,

I see that you're a champion of the people.

Let me see, hmmm, because I don't put roadblocks in my code
to prevent screen-scrapers from picking bits of data out of
it and screwing me over on my income, then I deserve to be
humiliated by a hero who believes that all dumb things in the
world should be free and that those of us who work hard to
earn a living should work harder to be as smart as you are.

Oh, and just to make sure, it's not your fault that people
use this code to screw me, because they themselves should be
responsible.

Sorry, but that's a cop-out. You simply don't care if I get
screwed. You're just making it easy for the everyday DX'ers
who don't know jack about software to grab free data
from my website.

Thanks for giving me yet another coding assignment. I could
have used this time for something a lot more productive.

-fred

From: Mike McAmis
Topic: 661 Message: 672

I had mistakenly posted an incomplete version of 4.58 in
www.xmlog.com/beta that didn't include all the updates. Dom has
downloaded the file currently posted and the problem has been fixed.
The date for the correct xmlog458.zip file is 5/21/03.

673. QRZ DLL

Yahoo group: XMLog
Date: 2003-05-23 15:59:56 UTC
From: Thomas M. Schaefer
Topic: 673 Message: 673

All,

At the end of the day today (Friday), I am going to remove the link to the QRZ32DLL on my website. After coming to an understanding with Fred of QRZ.COM, I want to support what he is doing and respect his wishes. So, I am going to change the code to use the UALR database which will give some basic information (but not nearly as much as the QRZ database). When I have finished this, I will repost the file.

Fred is working on some things to get online access back, but he can announce that later. Thanks to all that used the DLL in its current form. It will be back operational soon.

Regards,

Tom Schaefer, NY4I

Can someone tell me what the heck this extremely silly exchange has to do with the extremely pleasant subject of the XMLOG program? Why can't these pathetic ego cases deal with each other, one on one, without polluting every discussion group on the web? XMLOG is a terrific program, supplied and maintained by a cooperative and agreeable author and enjoyed by sensible people. In my humble opinion there is absolutely no call for such petty trash being directed to the XMLOG group.

Freedom of speech on the web is a wonderful thing. Unfortunately there are always a few who do not have the maturity to handle it.

Very simple. There are/were many users of XMLog making use of this DLL and I thought it relevent to users of XMLog. Perhaps you were not aware of this fact and I can understand your confusion as I did not preface my remarks with "This email is only for users of XMLog that used the QRZ32 DLL. Additionally, Mike currently has code in his program to directly access the QRZ website. As Fred has expressed, he desires that people do not do this so Mike has to make a decision. So, now you know what this silly exchange has to do with XMLog.

Thanks for the suggestion Joe. I tried shortly after to convert
frequencies to the format MM.KKK and that did the trick also.
Fortunately I only had 36 entries to edit.

Would be nice if there were an option to use a standard freq format
of one's choice. I'd also like just a general search field instead
of having to mouse around to the relevant data field each time. Not
complaining, just suggesting! :)

678. RE: [XMLog] QRZ DLL

Yahoo group: XMLog
Date: 2003-05-24 02:32:47 UTC
From: Mike
Topic: 673 Message: 678

This will probably sound silly, but I'll suggest it anyway. The actual meat of the complaint was that folks were retrieving the info without seeing the ads. Perhaps if it were possible to use the DLL to conveniently import the data, while at the same time displaying the ads in a window somewhere. That way everyone wins... QRZ's advertising gets seen, and XMLog users get the data.

679. LoTW submission

Yahoo group: XMLog
Date: 2003-06-05 16:32:26 UTC
From: witstock7
Topic: 679 Message: 679

I'm trying to participate in the LoTW beta testing program but I have a question about the adif log submission. The instructions from the ARRL call for the log to have the suffix as adi but the log I was preparing to submit gets saved by XMLog with adf as the suffix. Can I simply rename it to adi or is there some computer wizardry involved?

Yes. If you can remember next time you export it you can add the .adi to
the file name you use and avoid the renaming process.

681. Leading zero(s) in time field...

Yahoo group: XMLog
Date: 2003-06-12 14:06:39 UTC
From: Mark
Topic: 681 Message: 681

Hello to all,

I am attempting to use the log file as the data source for a QSL card mail merge. Importing the log file into Access 2000 works fine except there are no leading zeros in the time field. I've tried adding an "hhnn" format to the field property but it doesn't add the zeroes. Any ideas on how this can be done?

Have you considered using XMLog's internal QSL Label and
Mailing Label features?

I print all my QSL cards with the QSL Label feature, and I
address the ones I'm sending direct with the Mailing Label
feature, and I'm pleased with the results.

Hi - I'm not familiar with column formatting in Access but you can do the formatting from Excel either by using the XMLog menu item "Display/Excel" or directly importing the log info into Excel using the queries available in the log file.

689. Memories for HF Rig control?

Yahoo group: XMLog
Date: 2003-06-13 21:10:53 UTC
From: Donald Jones
Topic: 689 Message: 689

Mike -

This is probably a ridiculous idea but I thought I would see what you think about it.

Being able to set my HF rig frequency and mode by clicking the frequency of a
packet cluster spot is really nice. Would it be practical to extend this to having a
displayable, user-built list of his/her commonly used frequencies which could be
"clicked on" to set the HF rig frequency/mode? Something like a simple memory bank.
(Don't tell my Cluster Sys Admin but I sometimes (not often) just type in a frequency
and then hit Enter. The packet cluster gives an error but I can still click on the
frequency that is displayed in the 'command error' message and go immediately to the
frequncy/mode.)

Does this make any sense at all? Just a thought....

Not that ridiculous, to me. Commander, by AA6YQ, does just this. It provides 100 memories, in 10 banks of 10. It only sets freq. and mode, at least on my FT920. Other rigs may be capable of filter, antenna, etc.. Not sure. It is pretty cool though. Do a search for "DXLAB" if you want a look at it.

Mike thanks for your consideration on this. The "modern" Ten Tec Jupiter, which advertises 100 memories as a features, clears every blooming one of them each time you install a firmware upgrade and do the mandatory full reset. After two iterations of that I decided that, for all practical purposes, I have no memories! So I have some selfish motivation in wanting it :-)

Thanks again - Don N4TN

694. Lost log entries.

Yahoo group: XMLog
Date: 2003-06-15 16:57:51 UTC
From: Donald Jones
Topic: 694 Message: 694

Its me again. I am turning into a real trouble maker in my older days. I really am not sitting around trying to think of things for Mike to do, but....

I have noticed from time to time that I am losing a log entry. I finally figured out what I was doing wrong (I am a real Keyboard Klutz): I am getting distracted during the heat of DXing and sometimes hitting STOP without having completed the log entry process. That is, even though I may have entered all the required data, I have not hit Enter or ADD before I select STOP (for whatever reason).

I wonder if it would be possible, when the STOP button is selected, to check if anything has been entered into the CALL input field and, if so, to display a "Are you sure?" type dialog box before exiting log entry ADD mode?

Thanks and 73 - Don Jones N4TN

695. Put correct time on spots in Spot Map and History?

Yahoo group: XMLog
Date: 2003-06-16 08:31:12 UTC
From: David Spoelstra
Topic: 695 Message: 695

First off, I *love* XMLog. I tell *everyone* about it, and I write about it on my web site:
http://www.qsl.net/n9kt/logging.html

Second, when I first fire up XMLog, I connect to my cluster and do a "sh/fdx/100" to populate the Spots Map and Spots History. Even though the spots have the correct time listed in the Packet window, I noticed that in both the Map and History window, they get listed with the current time - *not* the time they were spotted that's listed in the Packet window. Can you fix that?

Thanks!
-David/N9KT

Hi Mike,
While you're doing that, I am having trouble getting
all of the posts to the band spot window aalthough
they show up in the history ok
especially 160M spots are not there and I read all of
the parameters and am pretty sue they are correct -
freq range, colors, etc.
If I bring up the spot window and do a sh/dx, the
spots do not populate the window. New spots populate
it randomly.
Any ideas.

#2

Next time you are in the worked/confirmed report,
check the spelling of "Submitted" The first occurence
is spelled Sbumitted"

698. Fixes/Features in 4.60

Yahoo group: XMLog
Date: 2003-06-23 03:51:51 UTC
From: Mike McAmis
Topic: 698 Message: 698

A new beta version 4.60 is available at www.xmlog.com/beta - Here's the info:

*** 4.60 ***

- The packet window menu item "DX/Check Call" now displays more info.

- PacketCluster alert times for the Spot History and Spot Map windows now extract the time from the alert itself rather than using the current time.

- The packet window now features Rig/Rotor memory buttons. These buttons are enabled using the "Edit/Memory Buttons" menu item. For details see the help section "Memory Buttons" within "Using the Packet Window".

- Added LSB and USB to the modes list.

- Added a "Edit/Clear Spot History" menu item to the Spots History window.

- Bug fix: Frequencies were not being extracted properly from PacketCluster spots when the spotting station had a long callsign.

- Bug fix: The date/times displayed in the Spot History window did not take daylight savings time into account when "Use UTC" was not set.

Mike - W1ECT

699. Question

Yahoo group: XMLog
Date: 2003-06-27 15:29:33 UTC
From: QSL
Topic: 699 Message: 699

Greetings,
I am currently 'playing around' with various logging programs, and have decided to go for XM - nice !

I have tried importing an ADIF file from AClog as a test, and find that XM doesn't seem to pick up the band data.

Is this a buguette in XM, AC or what, does anyone know. Opening the adif with notepad shows everything to be there, but as yet I am not over familiar with adif's.

700. Question

Yahoo group: XMLog
Date: 2003-06-27 18:13:37 UTC
From: QSL
Topic: 699 Message: 700

Greetings,
[Again]

I may have answered my own question re adifs.....It would appear that in the original log [AClog] the frequency must be stated in Metres [20/40/etc]. Having altered the test file to show 20m rather than 14Mhz the imported adif file now displays 14Mhz in XM. which seems a bit weird as in the UK logging is done in Mhz.
Never mind, I'll get there.

Graham -

Perhaps you have already figured it out, but ADIF supports both a BAND field and a FREQ field. Scott N3FJP chose to use BAND (meters) and that is all that shows up in his exported ADIF files. However, XMLOG obligingly looks at the BAND field and correctly creates (and displays) the FREQ information. (If you subsequently export the log from XMLOG to an ADIF file, it will contain a filled-in FREQ field.

Forgive me if this information was already obvious (or is not really relevant to your observations).

XMLOG RULES !! :-O

Thanks Don,

Yes I've now got a selection of 'adif' files and am slowly starting to
sort out what is what - and which software uses which fields.
Must say I'm very impressed with XM so far. {now to cure this darm
pooter noise to use it effectively - Hi !}

Hi Larry, I'll add 60m awards tracking if DXCC, WAS, etc. add 60m. Currently you can enter 60m frequencies for log entries but I'll have to add "60m" as a new search key for the frequency field (currently you can use 5 as a search key to select all 60m QSOs).

Hi

Don't know the 5Mhz regs in the States, but in the UK, reports have to be given as 'SINPO' rather than RST, as this allocation is only available on NoV [Notice of Variation] to the UK Licence, and everything is tied in with the Military Requirements. The allocation is 'supposed' to be used for NVIS propogation studies on, I think, a Five Year basis, so in strict terms it is NOT an Amateur Band, logs are made available to the 'powers that be' for correlating/investigating.

73

Graham [not a 5Mhz Nov Holder]

I do know that we are only allowed domestic contacts on 60 meters right now so the only awards would County Hunting and WAS for us. We use the ol' RST reports here. 50 watts ERP and a dipole for the band is considered to have no gain. Other antennas require that you maintain records to prove you aren't using over 50 watts ERP.

Topic: 703 Message: 707

I'm curious where I can find, in writing, where it says domestic contacts only. Dave K1ZZ wants to publish, in QST, the calls involved in the first trans-Atlantic QSO's.

"""Who will be the first to log a transatlantic QSO with the UK or a DX QSO with Hawaii or one of the US Pacific territories on 60 meters? """ Copied from ARRL web-site.

What the FCC Rules Say: ?97.303(s)

An amateur station having an operator holding a General, Advanced or Amateur Extra Class license may only transmit single sideband, suppressed-carrier (emission type 2K8J3E) upper sideband on the channels 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz and 5405 kHz. Amateur operators shall ensure that their transmission occupies only the 2.8 kHz centered around each of these frequencies. Transmissions shall not exceed an effective radiated power (ERP) of 50 W PEP. For the purpose of computing ERP, the transmitter PEP will be multiplied with the antenna gain relative to a dipole or the equivalent calculation in decibels. A half-wave dipole antenna will be presumed to have a gain of 0 dBd. Licensees using other antennas must maintain in their station records either manufacturer data on the antenna gain or calculations of the antenna gain. No amateur station shall cause harmful interference to stations authorized in the mobile and fixed services; nor is any amateur station protected from interference due to the operation of any such station.

I would also find this useful since I am a stickler for informarion.
Currently if the QSO is more than a DX pedition exchange of RST and name
I log the end QSO data in the notes field but usually I have a lof of other into there as well. Edit checks in other fields usually prevent their use for this purpose plus they also contain useful info.

From: Bill Hawkins
Topic: 711 Message: 711

I wonder if the ARRL will have any standards for header names on submitted ADIF logs. For instance, should the contacted station column be titled STATION or CALL, should the frequency be BAND , FREQ, or MHz, should time be TIME_ON, UTC, TIME, etc. I would hate to send in a big log and have it rejected for one wrong heading.
Is there any info printed on this? I can't find it.
Thanks
Bill

Logs are not submitted in ADI format. LOTW uses a file converter you download. It appears to be a very smart tool because I've used it convert MLOG, Logger, CT, and AE6Y ADIF files and it worked just fine. The file converter turns ADI files into TQ files and the TQ files are the files you upload to LOTW.

OOOOOK, I remember now reading about downloading software from ARRL.
In that case, I suppose that during the conversion the titles are converted and we get to, or it puts them into the correct order. All of my logging in FREQ_MHz instead of BAND and I wonder if the converter can make the required changes? I know that BAND is required in DXCC submissions.
Thanks
Bill W5EC

Logs are not submitted in ADI format. LOTW uses a file converter you

Jim,
Thanks for sharing that with the whole group when Mike
specifically stated to send it ONLY to him at the above address,
and as an e-mail attachment- not imbedded! What a waste of
bandwidth and system resources, for a hobby that just isn't
what it used to be only a few years ago. na5s

Hi, It's seems as if Net-Logger is not handling things quite
correctly.

One thing it's doing was using strange line sequences in the Address
fields. Normally it's using CR/LF for break up lines but it seems to
be using CR/CR/LF/CR/LF within address fields. It also isn't adding
a CR/LF after the last line in the address field. The address field
should also be flagged as a "Multi" field e.g. <address:15:M> ...
when there are multiple lines.

Well I have done something when I open up my xmlog program I can't see the Add Selcet or Modify Buttons at the bottom of the page. I have tried minimize, mazimize, restore. But nothing seems to work.

Any Ideas?

you can probably change your monitor settings to something smaller.
I suspect they may be set at 480 x600

723. Re: NIL QSOs

Yahoo group: XMLog
Date: 2003-09-12 01:35:42 UTC
From: Mike McAmis
Topic: 723 Message: 723

Hi Steve,

Well here's what I do - not quite what you want. I just set
the 'Prefix' field to ? and add a NIL in the comment field as well.
Then you can do most of your normal searching but the QSO won't show
up in the awards totals.

Another way I tried for a while that I didn't like as much was to set
the DXCC (or WAZ or WAS) sent/rejected dates to ?. This keeps it out
of the awards totals as well but is a bit bogus since the QSO wasn't
really sent/rejected by the ARRL.

Mike - W1ECT

****

I need some help with XMLog v.4.35 1/7/02. Nothing wrong with the
program...great as usual. I would like to be able to do something
with my NIL Qs and if possible keep them in the main log to be able
to look them up when I wish. I would also like to have them not be a
factor in the stats...just look 'em up but not have them show as a
sent but not received in the awards section. Any suggestion?

73/dx - Steve, k8wk

You can export to ADIF and import into one master file.

Hi Bob, Not sure what the event coordinators need - If they just want a listing you can select the appropriate entries (selecting by date perhaps?) then use the Display/Short or Medium menu item and then use File/Print from the display window.

You can also use the excel option on the display window and customixe the spreadsheet for the route 66 event.
However, I have done it both ways and find just filling out the form just as easy and they make less mistakes when reading it. They don't seem to be used to automation.

Yahoo group: XMLog
Date: 2003-09-16 14:14:51 UTC
From: Mike McAmis
Topic: 731 Message: 732

Hi David - XMLog enables DTR up but uses RTS for flow control (if the option is enabled in the Packet Options menu). This means RTS gets toggled as data is sent.

Hi David - I don't know if the state depends on any other system or driver settings so it's best not to count on the state. If you need both DTR and RTS to be up you could build an adapter cable that connected both to DTR.

Hi,

My concern would be to provide credit for those stations who worked me as an Idaho station to give credit for that state. I figured out how to do the separate adif files now so all I have to do now is wait for my certificate process to complete through LOTW. At that point, after I upload all my files I'll worry about the awards program requirements.

Thanks and very 73 to all.

Well I stand corrected, here are the rules governing the major ARRL awards:

VUCC Rule 6: For VUCC awards on 50 through 1296 MHz and Satellite, all contacts must be made from a location or locations within the same grid locator or locations in different grid locators no more than 50 miles apart. For SHF awards,contacts must be made from a single location, defined as within a 300-meter diameter circle.

WAS Rule 3:Contacts must be made from the same location, or from locations no two of which are more than 50 miles apart which is affirmed by signature of the applicant on the application. Club station applicants, please include clearly the club name and callsign of the club station (or trustee).

DXCC Rule 9: All stations must be contacted from the same DXCC Entity. The location of any station shall be defined as the location of the transmitter. For the purposes of this award, remote operating points must be located within the same DXCC Entity as the transmitter and receiver.

Hi Kevin, It's easy to build seperate ADIF files based on the QSO
date and then create ADIF files that contain only the selected
QSO's. For example do a log search with the date field set to:
>=02/04/80,<=09/12/92 and then select the "Export ADIF File" menu
item and choose "Currently Selected Log Entries" when you get
the "Which Entries?" prompt. If you need to use different selection
criteria check the "Searching the log" section of the help files.

Hi Mike,

Yes, I figured that out. In this case, I just did a search with <05/16/01 which was the date I moved here officially and then did the adif file with those entries. Worked like a champ.

Thanks for all the help though and your great product. Very 73.

From: andy.m0ceg
Topic: 745 Message: 745

Hello All,
I am a new member to the group so please for give me if I ask some questions that you have been asked in the past.
First off my name is Andrew Shipp but please call me Andy, I've been a licensed amateur since 1994 this was the B licence, then in 1998 I did the mors code which gave me the A licence of which I am very proud of as this is the second exam I've have ever past in my life. My first question to ask do I need to use this logging program for contest only or can I tern this feature off? if so please can you tell me how to do this please.
Also is there another blind people on the group who is using this program with a screen reader? I am using Jaws 4.02 and before I get started with this log I would like to know how exessable the program is for the screen reader.

I would be very grateful for any help on these questions.
Regards Andy

747. search problem

Yahoo group: XMLog
Date: 2003-09-24 01:20:24 UTC
From: Phil
Topic: 747 Message: 747

I am using v4.56, and until the last few days it has
worked perfectly. Now, when I select "search" and
type the first letter or figure into any field I
receive the following illegal operation termination:

invalid page fault in module msvbvm60.dll at
015f:73458401

Searching with no criteria entered works fine. I
reloaded the software with the same results. It is
also working fine on my other machine, but this is the
one on the radio desk.

All help will be appreciated. Any ideas?

Hi David - I'll fix this bug in the next beta. Fortunately the LoTW software doesn't require the "Band" field in submitted ADIF files. Early LoTW beta versions did require this field but during the beta they changed it such that it can determine the Band from the Frequency.

LOL, well, guess what? They have a bug too! I just got an email
from them and they said the same thing except they found out that it
doesn't work for 60m!

That's how I found the bug. I just uploaded 6,000 Qs to LOTW
yesterday and the only ones rejected were the ones on 60m.

Date: 2003-09-25 00:43:17 UTC
From: Phil
Topic: 750 Message: 750

Tnx Mike,

Your suggestion sent me on the right path. I compared
the .dll's on each machine; and they appeared to be
identical as to size, date, properties, etc. For lack
of any better ideas, I copied the one from the working
machine over the one on the problem machine. That
seems to have cured the problem.

73,

Phil - N1KI

Tnx fer info Mike

I think many VHF'ers (interested in DX, EME, MS etc) would like to have this possibility on your Spots Map. Some I think would like to have it for all bands above 6 m. But to have it for the the bands 144-145, 432-433 and 1296-1297 MHz would be nice.
The DX cluster features in your program is outstanding and also the feature to produce an EXCEL file for printing etc.!

73 de Kjell

754. Fastest way to spot logged QSO?

Yahoo group: XMLog
Date: 2003-09-26 19:52:48 UTC
From: David Spoelstra
Topic: 754 Message: 754

Hi! I'm trying to figure out the fastest way to spot a QSO on the Internet packet cluster that I'm logged into after I log it. Right now I pop over to the Packet window type in the info. I tried using a macro with #freq and #him, but that was never filled in.

It would be really neat to right click on a logged callsign in the Log window and be able to automatically spot it with the info in that logged QSO.

Just trying to make a fantastic logging program even better!
-David/N9KT

Hello David, I've had a note in the "to do" list that addresses this and I guess I couldb oost the priority. It would just add some new commands like #logdate, #logtime, #logcall, etc.

756. XMLOG with the Ten Tec Pegasus?

Yahoo group: XMLog
Date: 2003-09-30 20:00:13 UTC
From: Donald Jones
Topic: 756 Message: 756

Mike -

I was on the TenTec forum bragging about XMLOG and how well it works with my Jupiter, and was asked if it works with the TenTec Pegasus. I don't see that listed as one of the rig selections but since the Pegasus and Jupiter are practically the same rig, I wonder if anyone has used XMLOG with the Pegasus or, if not, there is any plan to include it in the future. I promised to report back to the TenTec forum with an answer.

Topic: 756 Message: 758

Hi Don, The current beta XMLog version at www.xmlog.com/beta does include support for the Jupiter, Orion, and Argonaut-V. No support is provided for the Pegasus since the serial port to the rig is normally unavailable since it's being used by the TenTec front panel software. TenTec does provide a Pegasus command interface that uses a file to send/receive data but implementing this interface would require a lot of new code (i.e. it's just too much work).

Hi Mike;
I have been experiencing difficulty in just getting this email msg to you...problem with span filters on my end and your end. Hopefully if this gets to you I need a question answered. I am trying to convert my XMLog operating file, called Big.log in my mlog folder to the adif format required by arrl LOTW. Is the log used in XMLog, my "Big.log" directly convertible to an adif by using the logconv utility that u describe? I tried this and logconv sez it has a problem reading my Big.log...remember, my Big.log is just my XMLog log file as used by XMLog. What am I doing wrong...this shouldn't be that difficult should it? Help...73/dx

Hi Steve,

I had no real trouble doing it. I just highlighted the entries I wanted to include in the .adif file, chose the export to adif menu item and named the file. Then, I was able to use the LOTW software to import it, sign it electronically and send it off. I really didn't find any hitches along the way.

I hope this helps. Very 73.

Kevin :)

Topic: 760 Message: 762

Hi Kevin...tnx fer reply. I guess maybe it's a case of me thinking too much agn. I have several thousand for the first log to go to LOTW. These are now just in the form that XMLog uses them, a *.log format. Then, my question is....did u use the ka5wss log conversion utility that is suggested by LOTW and Mike McAmis of XMLog...or did u just use the LOTW utility which arrl suggests to use for just a few log entries not several thousand like I have. Question: when u use the XMLog menu item as u suggest, does it reformat the log entries selected to another file which is then adaptable to be converted to adif via...say the ka5wss utility? When u use the XMLog menu to "export" to adif is it really putting the new file in adif? If it is, then it probably can be attached just as is to an email to LOT...right? Kevin, do u see my confusion? I guess I could try it and see what happens...any comments? Tnx fer reply...only one so far...73/dx

From: Jim Roller
Topic: 760 Message: 763

Steve,

I am by no means particularly an expert, but this works for me. If you want to send your entire logbook, just select Import from the log screen and then select Export ADIF. It will ask for either your whole log or "selected entries". Select All log entries and it will ask where you want to save the file. Be sure to save it with the .adi file extension. This becomes the input to the ARRL program TQSL. TQSL will create a *.TQ8 file which can then be uploaded via e-mail or on line to LoTW.

If you do not want to send the entire log, you can select entries for whatever criteria you wish. I broke my 44K+ log down by year and sent 8 separate files. At the Eport ADIF box check "selected entries" instead of "all log entries".

You do not need to convert to an ADIF file with other software. Mike does it all for you with the EXPORT command.

I hope this helps.

Jim, N4IR

764. XMLOG with a USB to Serial port converter?

Hi Donald,
I'm doing exactly what you're talking about. I had lots of USB ports and no available COM ports. I bought a device at the local electronics store made by KEYSPAN. It is a COM to USB interface. Actually, I bought two of them. It would have been cheaper to buy a bus board with several serial ports but they don't seem to make those any more. The KEYSPAN devices work fine.

Good luck and 73,
Bob Doolittle, AE6NS

769. RE: [XMLog] lotw log conversion

Yahoo group: XMLog
Date: 2003-10-03 01:02:05 UTC
From: Kevin Nathan
Topic: 760 Message: 769

Hi Steve,

From reading your answers to Jim, I am assuming you got things working ok. I didn't use anything except the export to adif menu choice from XMLog and the import adif file in TQSL. Of course, I haven't been back to the LOTW site since I uploaded the file so don't know how effective it was yet. <GRIN>

Good luck and very 73.

Kevin :)

Subject: Re: [XMLog] lotw log conversion

Hi Kevin...tnx fer reply. I guess maybe it's a case of me thinking too much agn. I have several thousand for the first log to go to LOTW. These are now just in the form that XMLog uses them, a *.log format. Then, my question is....did u use the ka5wss log conversion utility that is suggested by LOTW and Mike McAmis of XMLog...or did u just use the LOTW utility which arrl suggests to use for just a few log entries not several thousand like I have. Question: when u use the XMLog menu item as u suggest, does it reformat the log entries selected to another file which is then adaptable to be converted to adif via...say the ka5wss utility? When u use the XMLog menu to "export" to adif is it really putting the new file in adif? If it is, then it probably can be attached just as is to an email to LOT...right? Kevin, do u see my confusion? I guess I could try it and see what happens...any comments? Tnx fer reply...only one so far...73/dx

Cliff -

Many thanks for the info. Do you have a suggestion
for where I might find the Keyspan for sale on the
web? I have done some searching but have not found
it available.

Hi Donald,
This is Bob, AE6NS, again.
Go to this web site:

http://www.keyspan.com/products/homepage-Serial.spml

and order the Keyspan High Speed USB Serial Adapter.

This is the one I use.

73,
Bob

774. Color for lines on labels

Yahoo group: XMLog
Date: 2003-10-09 18:22:37 UTC
From: Donald Jones
Topic: 774 Message: 774

Mike -

This is a very low priority item for your consideration on some long winter afternoon!

Printing QSL labels (actually I am printing the entire reverse side of my QSL cards), I want to enclose my return address in a box and would like have the lines in red. I have been unable to get the lines to print in any color except a light gray. Printing text in colors works fine. I have tried this on two different printers with the same results. Perhaps I am doing something stupid. If anyone else has been successful at printing the lines on labels in colors I would like to know.

Thanks and 73 - Don

I forgot to mention that in QSL Label composition,
the lines do show up as the proper color on the
preview screen, but not when label printing takes
place.

Hi Don - I suspect this is a bug in the Microsoft runtime routines. There is a bug listed in the Microsoft Knowledge Base that may be related and the bug description notes that the problem is dependent on the Windows version. Which version are you running on the two systems?

Sorry - I have misled you. I have tried it on 2 different printers on the same system. I run WIN98SE - which I* can not get any support for. I hope to go to XP in the future but it will not be right away. I am trying to think of another program that I could try this in. Perhaps Microsoft Access would be similar. Do not worry much with this - it is by no means a show stopper for me

Thanks for your input Dave. I am totally confused! I changed a line in a Microsoft Access report to red and it prints fine. Likewise, a random length line in Word will print as whatever color I select.

Back to my XMLOG QSL label problem - my printer driver (I use a Cannon i550) has a preview feature which allows me to see the object immediately before it is printed and it shows the lines in black, not red as I have specified in the QSL label layout.

I am reluctant to bog this fine mailing list down with too much about a problem that likely concerns few users. I'll keep experimenting and if I come up with anything of significance I'll report it.

Thanks for your concern - Don N4TN

Hi Don, If the problem is actually in the Microsoft runtime package you won't see it except in Visual Basic applications... not Access, etc. It could also be a printer driver problem, you can check the web site for your printer company and see if they have update drivers available.

781. LOTW Import

Yahoo group: XMLog
Date: 2003-10-12 14:31:58 UTC
From: Bruce Ferry
Topic: 774 Message: 781

Now that I can download a listing of my QSL info from LOTW, how best can I integrate this into Writelog? Here are my concerns:

1. If I just import the ADIF file downloaded I suspect I will get a duplicate entry in XMLOG. Not what I want certainly. Some method of merging the LOTW confirmations would be needed.

2. If the QSO in question has already been confirmed then the need to overwrite or leave alone the existing QSL is needed. This can be a really complex issue and may be best decided by human intervention for each QSO.

3. What might work best would be a separate "LOTW CONFIRMED DATE" so that the maximum flexibility would be maintained. Number 2 above would no longer be an issue if implemented this way.

Just my thoughts and concerns ...

From: Mike McAmis
Topic: 774 Message: 783

Hi Bruce - Funny you should mention this. It's now a hot topic among the ARRL LoTW guys and logging application developers. There is no offical interface available for downloading LoTW info into a logger. It's something that should have been spec'ed out and developed before LoTW was made public but they didn't want to hold things up for this "minor detail". Until things are resolved officially I'm not going to make any changes.

You're right about the merging problem - XMLog doesn't currently provide any so records would just get duplicated. Currently LoTW doesn't provide for any explicit record tracking info and they don't plan to add any. Their point-of-view is that downloaded records can be matched by call/date/time/mode. This means that if any of these fields got edited/deleted in your log the matching record won't be found and some kind of interaction will be required.

Mike -

I can't find anything relevant at the Canon support web site. And I don't really know what comprises the Microsoft runtime package. I guess I will let it go as is. I don't think that I am supposed to use graphics on the mailing list, but I will send an image of the label preview directly to you just to verify exactly what the problem is. I appreciate your concern, but it is certainly not that serious a problem for me.

785. Function keys on CW menu

Yahoo group: XMLog
Date: 2003-10-12 16:20:46 UTC
From: CyberGeezer
Topic: 785 Message: 785

Hi gang--

Not having a memory keyer, I have taken to using the CW Menu on the Packet Window to send canned strings.

Sometimes all of the associated function keys work fine, and sometimes none of them work at all and I have to mouse-click in the menu. (e.g., Ctrl-F5 to send message # 5, F12 to stop sending, etc.)

I haven't determined any pattern to the contexts in which these keys work or don't work.

Anybody seen this? Any ideas?

Just wondering what the process is to request some features to
XMLog? Specifically from a Canadian perspective.

There are many Canadian Awards for example:
http://www.rac.ca/awards.htm

County and Provices could also be added to the "list" option of each.

Thanks in Advance,

788. lotw and satellite contacts

Yahoo group: XMLog
Date: 2003-10-13 16:23:36 UTC
From: kd6na
Topic: 788 Message: 788

Hi,
I am having troubles uploading my satellite contacts from xmlog to lotw. xmlog doesn't support sat contacts very well anyway, but I like it and have been using it for a couple of years now. I enter sat contacts by just entering the receive freq and then adding the sat name and mode just in the note field. But now I want to upload to lotw and in order for lotw to recognize the QSO, many other adif fields need to be filled in. See:
http://www.amsat.org/amsat/news/ans.html#06

In short, we need BAND, BAND_RX, PROP_MODE, SAT_NAME all to be filled in, so we would need these fields in the xmlog log window. Any chance of getting that feature added?

Or, a more genral question: how does one enter a cross band contact in xmlog?

thanks and 73's,
Jim KD6NA

789. XMLOG and LOTW - Multi QTH and Mobile Ops

Yahoo group: XMLog
Date: 2003-10-14 14:05:56 UTC
From: Rhodes, Jim
Topic: 789 Message: 789

Hi gang,

I have just set up my certificates on the production version of LOTW.

I was wondering how other users of XMLOG handled operations from different QTHs and mobile.

I have my former QTH QSOs in a separate .log file and that is not a problem for uploading to the associated location on LOTW.

All of my QSOs at my new QTH after Aug 2002 are all mobile. I have operated from a number of counties, states, and grid squares. I currently have all of those QSOs in one .log file.

Am I correct in assuming that I need to break out all 800+ QSOs into .log files by Grid, county, and state?

Thank you

Jim

792. XP glitches

Yahoo group: XMLog
Date: 2003-10-14 18:30:36 UTC
From: rcher
Topic: 792 Message: 792

I have searched the archives looking for an answer, but I can't find it. So now its time to tap the knowledge base here at the XM Log group. I have been running XMLog for about 2 years now, under Win 98b on my IBM TP-600, and love it. I recently upraded to XP and started to set up the laptop for mobile operation. When I try to get the frequency from my FT-100, it shows WAY off...like 28.040 showed 22.4XX. This feature worked just fine under 98b. Kind of strange and I hope that someone has an answer to this one.
I am an avid CW man and want to run XCW but after reading about the XP-XCW incompatability, I need a work-around so that I can operate mobile CW with the laptop instead of a key. Any and all help is greatly appreciated.

793. Re: lotw and satellite contacts

Yahoo group: XMLog
Date: 2003-10-14 20:40:53 UTC
From: Mike McAmis
Topic: 788 Message: 793

Hi Jim, Sorry but I don't have any plans for handling satellite or cross-band QSOs in the near future. As you've discovered XMLog isn't the optimal logger for VHF/UHF/... fans - dunno what falls into that category though. Basically I've written XMLog to satisfy my own needs as a HF DX'er/Contester and then made the results available to the general public. Now if I was making money on this thing no doubt I'd be a bit more responsive to requests for changes from my user community!

If you want to stick with XMLog I think your only option would be to include the info within the Notes field in some consistent way and then somehow post-process XMLog's ADIF file to move that info into appropriate ADIF fields.

Mike - W1ECT

I fully understand! I do appreciate your program, like I said, I have
been using it for over 2 years now. But I really like the idea of lotw
and it sure is a lot easier if the logging program fully supports lotw.

>
> If you want to stick with XMLog I think your only option would be to

I just did that: output an adif file from xmlog, then wrote perl
scripts to get the sat contacts into acceptable form for lotw. It is
hard to write a general program for that though.

I have been looking into dxlab since it does support sat contacts. I
am not entirely happy with the user interface in dxlab though.
Probably because I am so used to xmlog's which I like very much. So, I
am not switching yet!

Again, thanks Mike for a nice program.

Hi Richard, Haven't seen this problem before, I'll take a look and see if I can find out what's going on. Is it something that happens frequently? If it happens again can you also mention the heading on the error message box.

I have a few internal changes to the packet code in the current beta version at www.xmlog.com/beta and perhaps one of them will address this problem.

Hi Mike,

Thanks for the quick response.
I have no trouble to log in on the packet culster by internet on MLOG 4.56. In a period of 15 or 30 seconds I can give the command like SH/DX and I get respons from the cluster. But after 15 or 30 seconds after login I get the following messagebox wiht the header NETWORK READ and the message: Can't get data from internet port (13) Type mismatch
The strange thing is I'm still connected to the packet cluster but I can give no commands annymore and get also no response from de cluster.
The cluster I'm speaking from is : on0nol.dyndns.org 9000
I' using the following PC-configuration: Gateway 700 Mhz with Windows 98 SE
When I'm logging in ouside MLOG and using te TELNET funtion I have no problem
The problem started a couples months ago by updating MLOG.
I hove this information can help you

73 de ON4AST Richard.

In the summertime every year I'm located for a couple weeks in Ware 01082 MASS. in the USA

798. add country name column to spots history

Yahoo group: XMLog
Date: 2003-10-25 18:20:27 UTC
From: zamba0321
Topic: 798 Message: 798

Hi Mike et al,

on the regular packet sports it shows the country name
just before heading information. Is it possible to also
add a column with country name in the 'spots history'
window ?

thanks

de K6TE

800. Problem with CW Alerts

Yahoo group: XMLog
Date: 2003-11-02 02:23:17 UTC
From: Kevin Nathan
Topic: 800 Message: 800

Hi Mike and All,

I set cw alerts tonight just to see how they would work for me instead of voice. I also set band and mode on for CW alerts. But when I get a spot coming in all I hear is dit-dit-dit-dah-dit, dit-dit-dit-dah-dit, W and then the band and mode. No other identifying information. I do have xcw.exe in the mlog folder.

Could anyone on the list tell me what may be happening here? Thanks much and very 73.

Kevin :)

Hi Kevin,

VE means "verstanden" and comes from the german CW language (acknowledged).

I have also a problem.

I cannot search for a callsign if it is not exactly matched. I get no response if I put in "K5*" despite I have many K5s in the log. Any reason for that?

Hi Kevin, That 've' is an old CW prosign that basically
means 'attention' or 'hey dude, listen up, something of great import
follows'. Don't hear it on the air much anymore...

The "Options/Packet Options" menu item lets you change the "Beep
On/Off" setting.

Check the "Searching the log" section of the help file for more
examples on matching things using wild cards like =K5*

Gary -

You can download the latest version of XMLOG from http://www.xmlog.com/beta

The Highlight feature pertains to packet window spots:
>OPTIONS >PACKET OPTIONS AND PORT SELECT >OPTIONS - look at the lower
right box and
click HIGHLIGHT either ON or OFF as you wish.

Please do not take my answer the wrong way, but one idea is to use contest software?

http://www.n1mm.com for example, but it is kinda late now to get started. CT for DOS is now free. Very reasonably priced and simple contest SW is also available at http://www.n3fjp.com

After the contest, you can export from the contest SW and import to XMLog, that's what I do. I personally use N1MM SW.

815. Problem with 4.63

Yahoo group: XMLog
Date: 2003-11-19 08:40:07 UTC
From: Stan Gantz
Topic: 810 Message: 815

Hi all...

Here is Stan, W5GZ..... I am now using Beta version 4.63, and I have used XM now for about 4 years. On doing my 10m DXCC record sheet, when checking; Awards, DXCC, Totals, it shows that on 10 meters I have 195 confirmed...BUT on looking at the DXCC Record Sheet, it showed I only had 193!!! Well, after spending a hour+ checking and re-checking everything (now 1:30am).....I finally found the problem! Back a few years ago, I worked two DX stations on 29.6 mHz FM, well, evidentially XM-Log does not like the frequency of 29 mHz entered. It just ignored these two contacts when looking at the DXCC Record Sheet! I just changed the frequency to 28 mHz, and NOW I show the proper 195 confirmed on the DXCC Record Sheet on 10m. It lists CW first, then FM, then SSB. Everything now is listed OK IF I don't use 29mHz!
Has anybody else had this problem? I do think that Mike should look at this at his earliest!
And Mike, I want to take time and space to THANK YOU for this exceptional program!! It's outstanding

From: Mike McAmis
Topic: 810 Message: 819

Hi Don, If you've moved everything to the "default" directory c:\mlog
then your .wav files should be in the folder c:\mlog\voice

BTW - The reason that XMLog doesn't get installed in "Program Files"
by default is that it's showing it's age - it started out as a DOS
app before such things existed. And it was originally called MLog
until someone pointed out an ad in QST for someone selling something
called MLog so I just stuck an X on the begininng!

821. LOTW Support II

Yahoo group: XMLog
Date: 2003-11-19 22:02:41 UTC
From: Mike McAmis
Topic: 821 Message: 821

Here's a note to let you know the status of LOTW support. LOTW is the ARRL's "Logbook of the world" electronic QSLing system.

Many XMLog users out there (myself included) have gone through the process of setting themselves up for LOTW, exporting their log files to an ADIF file, and submitting this file to LOTW. You may have even downloaded a list of QSL info records to see how many LOTW QSLs you have. The question is "What now?".

I have done some experimenting with building LOTW support into XMLog. I've put together some test code that does the download of LOTW QSL records and produces a report that identifies any discrepancies between values in existing log fields and the values provided in the LOTW QSL records. The next step is adding code to update log records with the info from the LOTW QSL records.

I'm going to wait a bit till I make this available because the ARRL has not yet defined how LOTW QSLs are going to be submitted for DXCC or WAS credit. Hopefully the records will be submitted electronically somehow and the submitted/accepted/rejected status will be downloadable so that XMLog (or any logger) will be able to do this directly. Apparently the mechanism for doing these LOTW submissions for DXCC and WAS credit isn't going to be implemented in the near future so don't hold your breath.

Perhaps I'll make the download/verify features available just so other folk can play with them...

From: N7MAL
Topic: 821 Message: 822

Yesterday on the contesting mail list Joe K4IK posted this:
""Today it is possible to automatically upload "signed" contest
QSOs directly from the contest logging program (WriteLog) and
download confirmations directly into a day-to-day log (DXLab
- in testing). I'm sure that other authors are in the late
stages of their own beta testing of similar capabilities.
Within a few months I would fully expect contest QSLing to
be fully transparent with confirmations available as soon
after the contest as the individual station feels comfortable
uploading the log.""

Joe's observations are not limited to just the contesting community. Anyone looking to achieve DXCC or WAS(Worked All States) can and should be utilizing LOTW. I'm not advocating using LOTW to replace QSL cards but use LOTW to expedite awards.
At this point in time MLOG and many other popular logging programs can't handle the input from an LOTW file. It makes an unbelievable mess, trust me, as Mike knows I've tried and Mike easily duplicated the problems. If you feel the urge/need to try for yourself back-up, back-up, back-up, your log, I can't stress it enough, back-up your log.
Kudos', many many Kudos', to Mike for going the 'extra' mile to make MLOG, in the future, fully compatible with LOTW.

Thanks Mike. Hummm - the voice folder is in that
directory and the .wav files are in the voice folder.
I tried the .wav files and indeed they do play the
numbers, etc when using a media player. This is very
strange. I can't get the announcements to be in cw
either and the spots history map does not work either.
I even reinstalled 4.63 and it's still the same. The
layouts for my qsl's and labels transferred fine as
did the log. Gotta be something simple. Any other
ideas? --don

At 10:31 AM 11/19/2003, you wrote:
>Hi Stan, Couldn't duplicate your problem here. I don't seem to have
>any problem with 29.6 FM QSOs being counted. Perhaps you can zip up
>your log and email it to me as an attachment (as long as it's under
>1mb).
Mike,

I don't know if I properly described the circumstances of this problem. The log works proper with everything entered as 29 mHz or above, BUT, it is ONLY when later looking at the data on the "DXCC Record Sheet" that XM does not "accept" anything with 29+ mHz. The log data, "Awards. DXCC, Totals" still shows everything proper ...it is just the "DXCC RECORD SHEET" that ignores it. I even went back this evening and re-entered the frequencies as just 29 mHz, and again, the "DXCC Record Sheet"ignored the 29 mHz QSOs, while they displayed proper on the main "Awards, DXCC, Totals" page.
Mike, it is not worth everything involved to send my log with it's 6000+ "Qs", since this problem is only for a couple of DXCC "Qs" on 10 meters using the FM mode. I was just curious if there was a possible bug. I can use it fine like it by just entering 28 mHz instead of 29.....

Tnx, es 73.....Stan W5GZ

Mike,

I'm using LOTW and have found it pretty good so far.
The extra tools would certainly make it easier to wade
through all the info. I appreciate the effort you
extend to make XMLog a fine program.

OK, I see that the problem occurs with the "Awards/DXCC Create Submissions Forms" menu item - but only if you use the 10m (or 6m) filters, the entries should be included if you don't set a band filter. I'll have a fix in the next version.

Hi Don, Another thing to check. Do you run XMLog from a desktop icon? If so make sure the location and start-up folder are set correctly - right click on the icon and pick "Properties". The same is true if you are using an entry from the Start button, you can right-click on an entry and pick "Properties".

Thanks Mike - yes I did check that and sure enough it was going to the "old" folder so I changed the target to the default folder. Still the same problem. Started 4.63 from the exe file in the mlog folder and it did start with 4.63 but still lots of problems of the same nature including a new one - when I select to have the spots tnc window, the spots map and the spots history to start with the program, they don't - I have to go back and select them again. Something is not happening in the ini file for 4.63.

So - I dumped everything from C:\mlog, downloaded the zip file again, installed it again, downloaded voice.zip again, installed it again after the initial run of 4.63 and did get the voice announcements to work - but - only if I leave the "qsl status" on (unchecked) - if I check it to turn off the status, the voice announcements don't work. Also, I'm getting double citations in the spots history window but only one (as it should be) in the "tnc" window. All very strange as 4.60 seems to work perfectly!

I'm going to clear 4.63 again, look through the registry and delete all references to it and go through the install again. In the meantime, 4.60 works fine just like always. Let me play with it some more and I'll report back. Tnx es 73 --don

DITTO here on the voice problem in 4.63 and not 4.60. Also in 4.63 with the QSL status turned of it also turns off the 'high-lite' function.

832. question on 4.63

Yahoo group: XMLog
Date: 2003-11-22 17:13:13 UTC
From: Gary Stone
Topic: 832 Message: 832

Hi,

I have noticed a problem and wonder if others see this. I will use just one band as an example. When the log shows the frequency as 18.000 and then I do a search for that particular country and enter 17m in the freq box it shows none worked. For example I just tried a search for any Norfolk Island on 17 meters. I put VK9N in the country and 17m in the freq box and the search yielded no hits. However, I have VK9NS in the log and the freq is listed as 18.000. I must have put in 18 for the frequency instead of the whole freq.

Anyone duplicate this?

73 de N5PHT, Gary

Topic: 832 Message: 833

Hi Gary, When you enter a band name like 17m as a frequency search key XMLog does a search using the actual band edges so 18.000 won't match. However you can use mHz values as frequency search keys so using 18 will match 18.000-18.999

838. Duplicate QSOs

Yahoo group: XMLog
Date: 2003-12-08 22:07:23 UTC
From: g4tgk
Topic: 838 Message: 838

Hi,
A friend of mine (G4TZX) has had Xmlog for about two years. He inputted his QSOs from 1991 to 2001 manually and as he mainly works PSK31 now, he imports the rest from the logs in MixW or Digipan. I was showing him the other day the various facilities re bringing up lists of contacts in various modes/bands/countries etc. He's suddenly found that about a quarter of his QSOs have been duplicated and he is having to go through his entire log and deleting the dupes. Even some of his old SSB QSOs have been duplicated. Any idea why this might have happened?
He's running version 4, same as me, and I have not had the problem. It seems that he must have done something wrong?
Thanks,
John, G4TGK.

From: Mike McAmis
Topic: 839 Message: 839

After doing some research into the recent reports of problems with packetcluster alerts I didn't find anything obvious. Before going further I (reluctantly) decided that the time had come to do a internal reorganization of this code. The results are available at www.xmlog.com/beta. I believe I've addressed the problems that were dependent on the setting of the "Don't display QSO status lines" option but the problem with missing voice alerts may need furthur investigation.

Subject: [XMLog] Beta test version 4.64

After doing some research into the recent reports of problems with packetcluster alerts I didn't find anything obvious. Before going further I (reluctantly) decided that the time had come to do a internal reorganization of this code. The results are available at www.xmlog.com/beta. I believe I've addressed the problems that were dependent on the setting of the "Don't display QSO status lines" option but the problem with missing voice alerts may need furthur investigation.

Same problem here. I just clicked "ignore" and went on. All seems to work fine.

Subject: Re: [XMLog] Beta test version 4.64

I had a problem during the install. There was an error msg about not being
able to install, something called winit.dll(something like that). There
seems to be no ill effects. The problems with the packetcluster alerts have
all been cleared up and from a legally blind guy I really appreciate that.
Thanks Mike

I've removed the reference to wininet.dll and built/posted it as
version 4.65 so it should install now without complaining.

Hi Mike;
As usual, kudos to u for doing and maintaining XMLog. As u know, I have been using it for a long time. I use it with Internet web cluster via telnet most of the time. I have a request for a future version. Is it possible at 'connect' 'internet connect' menu choice for the active packet window to, at the dialog box have available a list of frequently used telnet addresses in...say a drop-down box or something like that. Here, in nw fla, the telephone lines are anything but reliable and constant. Therefore, there are a lot of drop-outs and as a result, I get disconnected quite a few times each day as I chase dx. Combine this with the drop-outs caused from my ISP and I have to type in the address to where I wish to connect, if its different from the one in the options box, a lot of times. I do that cuz some of the time the one I use a lot is not available, and I wish to switch addresses of the web packet cluster.
No big deal, just a thought if it is easy. Tnx agn for the logger, and...73/dx and Merry Xmas and a Happy new Year...

If I understand your question correctly what you are asking for already exists. Pressing the F-5 key opens a dialogue box with a drop down list. I have 6 nodes that I connect to regularly, and I've created a .NOD file for each node.

Yes those are all internet nodes. I don't how long I've been using MLOG but
it has been a long time and there is no RF Packetcluster available here. The
only way I have ever connected is using the internet. Here is my .NOD file
for the N7OD node:
The connect line is the internet address of an internet node. The send line
is your callsign.

rem
rem Internet PacketCluster at N7OD
rem
connect n7od.pentux.net
send (your callsign)

852. Xmas Greetings

Yahoo group: XMLog
Date: 2003-12-22 10:21:04 UTC
From: g4tgk
Topic: 852 Message: 852

Hi,
To get you into the Christmas spirit click on
http://web.icq.com/shockwave/0,,4845,00.swf
It's harmless fun.
Seasons Greetings & Happy Holiday to all,
John, G4TGK.

853. Can't get data from internet port (13) type mismatch

Yahoo group: XMLog
Date: 2003-12-28 00:37:39 UTC
From: ea4wc
Topic: 853 Message: 853

I have the same problem of Richard (ON4AST) see mesages below, but I find more information, the cluster was running by Internet until the last 23/nov, since this day to today probably I install a software that modify the structure of Visual Basic, but my problem is very easy, I review all my installation and I don´t find the problem,

can anybody help me??

Thank in advance from Alfonso ea4wc@...

Subject: Re: [XMLog] Re: error message

Hi Mike,

Thanks for the quick response.
I have no trouble to log in on the packet culster by internet on MLOG 4.56. In a
period of 15 or 30 seconds I can give the command like SH/DX and I get respons
from the cluster. But after 15 or 30 seconds after login I get the following
messagebox wiht the header NETWORK READ and the message: Can't get data from
internet port (13) Type mismatch
The strange thing is I'm still connected to the packet cluster but I can give no
commands annymore and get also no response from de cluster.
The cluster I'm speaking from is : on0nol.dyndns.org 9000
I' using the following PC-configuration: Gateway 700 Mhz with Windows 98 SE
When I'm logging in ouside MLOG and using te TELNET funtion I have no problem
The problem started a couples months ago by updating MLOG.
I hove this information can help you

73 de ON4AST Richard.

In the summertime every year I'm located for a couple weeks in Ware
01082 MASS.
in the USA

Hi Richard, Haven't seen this problem before, I'll take a look and
see if I can find out what's going on. Is it something that happens
frequently? If it happens again can you also mention the heading on
the error message box.

I have a few internal changes to the packet code in the current beta
version at www.xmlog.com/beta and perhaps one of them will address
this problem.

854. Alaska counties

Yahoo group: XMLog
Date: 2003-12-28 03:10:29 UTC
From: Patrick St. Jean
Topic: 854 Message: 854

I'm a little confused on this one, so can someone help me out? I've got
a contact in the log with KL7RA and am trying to set the correct county
for it. QRZ shows "Fairbanks North Star", but there's no similar entry
in the list in XMLog. I'm thinking that one of the two is incorrect, but
don't know which one.

Thanks in advance!
Pat

Hi Pat, XMLog uses the 4 Alaska 'counties' as defined by the folk who provide the county hunter awards. Their list is available at:

www.countyhunter.com/counties.htm

Since many people use XMLog to track their county hunter status these are the values I use. However as far as the Census Bureau is concerned they think Alaska has 27 counties:

http://quickfacts.census.gov/qfd/maps/alaska_map.html

For awards purposes, KL7RA is in Central County.
There are only 4 award counties in Alaska

Eric,

I too am / was a SHACKLOG user and you will need to convert your export file (from the print standard reports part of the stats F2) menu) into ADIF.

Contact me direct and I should be able to help you if you e-mail me a copy of your export (*.log) file

From: David Spoelstra
Topic: 858 Message: 858

It's a very small bug, but I thought I would point it out to make a fantastic program even better.

When you are looking at the "Spots History" screen, and a 60m spot is shown, the mode column is blank. It should be "SSB" since that's the only mode allowed.

Topic: 859 Message: 859

Hi all,

As a new user of XMLOg I thought it only right and proper to say how good my first impressions of it are.

I managed to convert 15 years worth of QSOs from SHACKLOG (DOS based) and imported them into XMLOg with no problem. using a registered version of PROADIKON. It took very little time to tailor XMLog to the way I like to use it and I'm very pleased with it indeed.

They'll be a donation at the end of Jan when my pay cheque arrives....

Happy New Year to one and all

Welcome to the group and a Good New Year to your family and You Vince.

You will find one of the outstanding features of XMLog when you go to search thru those 15 years of qsos looking for a particular one with only sketchy partly information. XMLog has a very powerful search function.

Hi everyone,

Thanks for the good wishes - in these days of only getting what you pay for I still find it astonishing that anything as good as this is freeware.

I've actaully worked some new ones (band or mode) over the last couple of days solely as a result of it.

Terrific stuff and certainly worth some money...

Good Luck, 73's

Vince

Hey, guys,

I am a very satisfied XMlog user of two years. Switched from dx4win when extra optional modes were never considered for that logging program.

I do have a problem that I have presented here before. When I upgraded all 3 of my computers to XP from WinME, I could no longer get XCW to work. The error message in all its informative completeness mostly says "XCW has a problem and must shut down". This occurs when I try to open the program. Anybody got a clue on this one? Previous lack of response tells me that I am pretty much alone with this problem- but on all 3 of my computers!?!!?

Thanks / 73 / HNY

I'm guessing that XMLOG want's to access the port directly. XP (or NT or 2000) won't allow this. Others have solved this problem with a piece of freeware software called USERPORT. I suspect this will solve your problem also.

Yes, it works for both - or any other odd port card. I don't use XP on the ham PC but on my main XP PC I have an X-10 controller with ancient software that want's to do more direct IO to the serial port. USERPORT made it work for me. USERPORT also is used commonly by anyone doing rig keying with the Writelog contest software (which is where I learned about it).

867. Re: [XMLog] New user....

Yahoo group: XMLog
Date: 2004-01-02 02:29:54 UTC
From: Tom Sessions
Topic: 859 Message: 867

OK, thanks. I will give it a try. It's interesting that I do NOT have any problems under XP keying my rig while using WriteLog or MIXW, just with XCW.

Thanks again

Yes, it works for both - or any other odd port card. I don't use XP on the ham PC but on my main XP PC I have an X-10 controller with ancient software that want's to do more direct IO to the serial port. USERPORT made it work for me. USERPORT also is used commonly by anyone doing rig keying with the Writelog contest software (which is where I learned about it).

869. Re: Duplicate QSOs

Yahoo group: XMLog
Date: 2004-01-02 16:49:13 UTC
From: Mike McAmis
Topic: 838 Message: 869

Hi John, I've had one other report of this and it also seemed to be somehow related to ADIF imports. Unfortunately I don't know what caused this. I suppose that it's possible that it was a "user error" if somehow an export was done and the file was imported by mistake. This kind of thing can be controlled if you use the "Don't import duplicate entries" option.

Sorry I can't give you a better response on this one...

Mike - W1ECT

870. Re: Alaska counties

Yahoo group: XMLog
Date: 2004-01-02 16:58:14 UTC
From: Mike McAmis
Topic: 854 Message: 870

Joe, W1TW has pointed out a nice link that shows the correspondence between the Alaska "regions" and counties:

http://www.qsl.net/kl7j/county.htm

I'll look into adding a feature to automatically handle county-to-area mapping based on this info.

Mike - W1ECT

871. Feature request

Yahoo group: XMLog
Date: 2004-01-02 23:29:00 UTC
From: David Spoelstra
Topic: 871 Message: 871

Hi Mike!

Small feature request. When I'm searching and pouncing, I usually have the program sitting in the "Add New Entry" mode. When I hear a callsign, I type it into the call box. Then I go to "Display | Display All Entries for Call" to see if I have already worked them.

It would be really nice if I could right click the call and choose the "Display All Entries for Call" from there.

From: Donald Jones
Topic: 871 Message: 872

David -

If I am understanding your request, it is already there I think.

I am running 4.63. If I am in "Add New Call" mode and type K4BAI in the Call box, then right click on the call, a box is displayed which not only gives me the "Display All Entries for K4BAI" option, but also already shows me the previous 5 entries (I don't know if that is the max) for K4BAI without any action being required.

Is this what you are wanting?

From: David Spoelstra
Topic: 871 Message: 873

I looked, and you are sort of right. If you have worked the station before, then you see what you saw. If you haven't worked the station before, then you don't get the "Display All Entries" option.

I can live with that now that I understand how it works.

Thanks!

874. scrolling problem in 'spots history' window

Yahoo group: XMLog
Date: 2004-01-04 18:49:50 UTC
From: zamba0321
Topic: 874 Message: 874

Howdy Mike et al,

when I am scrolling through the spots history window, and say
I'm looking at an entry in the middle of the history (scroll bar
in the middle) then when a new spot arrives the screen either
scrolls to the end or the beginning depending on how the
'autoscroll to end' option is selected.
What I am really looking for is a way to have the screen stay at
its current position even if new spots are added at the end or
beginning of the list. This way of operation is needed say in a
contest situation where spots arrive quickly and there is no way to
scroll back to a previous page since new spots make it scroll to
beginning or ending. And even in non-contest operation it is hard to
look at the screen as it always scrolls when a new spot arrives ...

or am I using the spots history in an unusual way or so ...

thanks
de K6TE

875. Smart QSL labels.

Yahoo group: XMLog
Date: 2004-01-06 02:48:40 UTC
From: kd6na
Topic: 875 Message: 875

Hi,
I would like to print large numbers of QSL labels (from contest contacts). I can fit 5 on a label and I would like to select stations that I have many contacts with (like > 20) and then "Add QSL Labels for all Selected Entries" and skip over band/modes that are already included. For example, I have 9 contacts for AA5AU:
01/04/04 0119 AA5AU 7.091 599 599 RTTY
01/03/04 1958 AA5AU 14.090 599 599 RTTY
01/03/04 1908 AA5AU 21.090 599 599 RTTY
10/19/03 0241 AA5AU 3.586 599 599 RTTY
10/18/03 1736 AA5AU 21.085 599 599 RTTY
10/18/03 1304 AA5AU 14.089 599 599 RTTY
02/08/03 1746 AA5AU 21.081 599 599 RTTY
02/08/03 1546 AA5AU 28.078 599 599 RTTY
02/08/03 0625 AA5AU 3.587 599 599 RTTY

I would like to automatically print only the following 5:
01/04/04 0119 AA5AU 7.091 599 599 RTTY
01/03/04 1958 AA5AU 14.090 599 599 RTTY
01/03/04 1908 AA5AU 21.090 599 599 RTTY
10/19/03 0241 AA5AU 3.586 599 599 RTTY
02/08/03 1546 AA5AU 28.078 599 599 RTTY

So that I get 5 distinct bands. Is this possible in Mlog?

Thanks,
Jim KD6NA

876. ADIF

Yahoo group: XMLog
Date: 2004-01-06 02:49:07 UTC
From: Vince Shirley
Topic: 876 Message: 876

Hi everyone,

I know I'm going to bore the pants of most on this reflector but I have a query which only affects those of us working under UK license conditions.

The UK license demands that we show the class emission designator in the form A1A, J3E etc. and not simply CW or SSB.

I converted my DOS log (SHACKLOG) to ADIF using PROADIKON and noticed that it changes the class emission designator to the generic form i.e it converts A1A into CW.

OK, its a ballache, but using a text editor I manually amended all of them back to the correct emission designator, which XMLog accepts with no problem.

The question is this - I read the mode from the rig (FP1000MP - Mk V) and it appears only to read the generic form derived from the frequency. For example, if I am operating on 7005 then I get CW in the mode field and not A1A. Is there any way I can get XMLog to show the designator in the UK required form (A1A) when I read direct from the rig or do I have to enter it manually?

Alternatively, is it possible for the mode to be selected from a drop down box ?

From: Mike Schrody KD7TKQ
Topic: 876 Message: 877

THis probably isn't the answer you're looking for, and I hope you can find a better way, but in the meantime rather than go therough the entire log file manually editing, why not use the find/replace feature of your word processing program? That way you can automatically replace all occurances of any string with a differnt one. If you're handy with simple programming, you should be able to write a macro that will automatically massage the file to the desired format for you.

Hi Vince, No there's no good way to handle this. Also you'll find that when you export your XMLog log file as and ADIF file the modes will be converted to CW etc. and you will have to edit the file to change them. I'll make a note in the "to do" list but it not something that will be changed in the near future.

880. Re: Smart QSL labels.

Yahoo group: XMLog
Date: 2004-01-06 04:32:20 UTC
From: Mike McAmis
Topic: 875 Message: 880

Hi - Sorry, there's no way to automatically "skip dupes by band" when creating labels. If you have some programming experience you could "post process" the labels file (labels.out) after you create it but before you print it deleting the duplicate band QSOs. The file is a simple text file, is pretty straightforward in form, and is sorted so that the dupe checking wouldn't be to tough.

Topic: 876 Message: 881

Thanks Mike - I used the search and replace facility in Notepad but it was so slow it wasn't true. The log size isn't enormous (4900 or so) but it took an age, evem with a decent processor and plenty of memory.

If you note Mike McAmis's reply, its something I'm going to have to live with for the time being anyway.

Thanks for your help,

Vince G0ORC
Belper,
Derbyshire.

THis probably isn't the answer you're looking for, and I hope you can find a better way, but in the meantime rather than go therough the entire log file manually editing, why not use the find/replace feature of your word processing program? That way you can automatically replace all occurances of any string with a differnt one. If you're handy with simple programming, you should be able to write a macro that will automatically massage the file to the desired format for you.

Mike,

Thanks - its no big deal and its great programme anyhow - thanks for the reply.

I won't be exporting the file a great deal so its probably a one off thing to do anyway

Additionally, ADIF removed the "time off" information too from my DOS log. Its not clear to me whether our license conditions require this or not In any event I've amended the notes field to include "Time Off: " wshich reminds me to enter it in each QSO. Just for curiosity, below is what the UK license consitions say about the log...

Thanks for a great programme so well supported,

Vince G0ORC
Belper
Derbyshire

6(1) Subject to sub-clause 2(6), the Licensee shall keep a permanent record (the "Log") of all wireless telegraphy transmissions at the Main Station Address and all Temporary Locations showing:
(a) dates of transmission;
(b) the times (in Co-ordinated Universal Time (UTC)) during each day of:

(i) the first and last transmissions from the Station (except when using automatic operations involving digital communications), or
(ii) switching the Station on and off for the purpose of enabling transmissions (when using automatic operations involving digital communications), and changing the frequency band, class of emission or power;

(c) frequency band of transmission or, in an Unattended Operation, the specific frequency employed;
(d) class of emission;
(e) power (or power level in dBW);
(f) initial calls ("CQ" calls) (whether or not they are answered);
(g) except during automatic operations involving digital communications, the callsign of licensed amateurs or licensed amateur stations with which communications have been established (not including those amateurs or stations which form part of the intermediate relay of Messages);
(h) details of tests carried out in accordance with sub-clause 4(4); and

(i) location when the station is operated at a Temporary Location.

Hi Vince, No there's no good way to handle this. Also you'll find that when you export your XMLog log file as and ADIF file the modes will be converted to CW etc. and you will have to edit the file to change them. I'll make a note in the "to do" list but it not something that will be changed in the near future.

Ok, Thanks Mike. Below is a perl script that does what you suggest. It
assumes you have "Display==>sort by" set to "Call" so all same call
signs are grouped together in the Labels.out file. I run it (in
cygwin) with the command:
cat Labels.out | qsl_dupes.pl > Labels_nodupes.out

Beware: I'm not a perl expert, but this does what I want.

--Jim KD6NA

#!/usr/bin/perl -- # -*-Perl-*-
# file: qsl_dupes.pl
#

$label = "";
$last_call = "";
$count = 0;
%labelArray = ();

while ( <>){

if ( /^------/) {
$label = $label . $_;
if ($count eq 0) {
$last_call = $call;
}

if ($call ne $last_call) { #end of group of calls

@ListOfKeys = keys(%labelArray);
foreach $key (@ListOfKeys){
print $labelArray{$key};
}
$count = 0;
%labelArray = ();
$last_call = $call;
}
```

```
$count +=1;
$key = $freq . $mode;
$labelArray{$key} = $label;
$label = "";

}
else {
if (/Call\=(\S+)/ ) {
$call=$1;
}
if (/Freq\=(\d+)\./ ) {
$freq=$1;
}
if (/Mode=(\S+)/ ) {
$mode=$1;
}
$label = $label . $_;
}
}
```

885. Alarm Tones

Yahoo group: XMLog
Date: 2004-01-19 20:27:53 UTC
From: Kevin Nathan
Topic: 885 Message: 885

Hi Mike and all,

I am a totally blind user of XMlog and wonder about something that would be helpful to me and others who might not be cued by colors. I think that something changes color wise when you enter a station in the log who you have already worked. However, for me, there is nothing that cues me to that fact and no way to quickly look up to get details on him or her. How difficult would it be Mike to build an audio alarm into a future release so that when you entered a station already in the log, it would give you an audio indication. Also, if that occurred, how would one quickly look up the information?

Thanks much and I really appreciate your consideration of this request.
Very 73.

886. problem controling elecraft K2

Yahoo group: XMLog
Date: 2004-01-20 05:52:50 UTC
From: zamba0321
Topic: 886 Message: 886

Hi Mike,

I am using a K2 and it mostly works fine clicking on a DX spot
and having the transceiver jump to that frequency and mode.

Every now and then however, the mode will be set wrong and when I
click on the DX spot again, the mode will then be set properly
on the K2. I did not understand this behavior until I read
following explanation regarding the sequence of
first sending the mode then the frequency to the rig:

The K2 remembers the last used mode per-band, so when it first gets
the mode sent via serial port and then the frequency it will
set the mode on the current band, then change frequency/band and use
the last used mode on that band...

I hope my explanation is clear but basically Xmlog should first send
the frequency and then the mode to the rig, can you double
check to see how it is sent now .. (using latest beta test version)

thanks de K6TE Wim.

From: Mike McAmis
Topic: 889 Message: 889

Many XMLog group users have their account set up so they get an individual e-mail for each message posted. You can edit your account such that all the postings for each day are collected and sent as a single e-mail. If you'd like to try this feature:

1) Go to groups.yahoo.com/group/XMLog
2) Log in with your user-id and password
3) Click on "Edit my membership"
4) Change "Message Delivery" to "Daily Digest"

Export b.log into an adi file
Import it into a.log (a.log will now contain entries form both files)
Export a.log into an adi file and send

As an alternate:
export a.log to an adi file
export b.log to an adi file
create new c.log in Xmlog
import both into c.log
Export c.log into an adi file and send

Hi - Use the "Edit/Edit Defaults for New Entries" menu item and set the Mode and Power fields. When you want to enable these default values set the "Edit/Use Defaults for New Entries" menu item (when it's enabled there will be a check mark next to the menu item).

Mike - W1ECT

You have to send a frequency that is actually in the band. 18.000 isn't
in the 17 meter band but 18.110 is. Same for 12 meter band.

Hi Mike,
Haven't chatted with you for a while.... I just began messing around with your program, that's pretty cool!!

What is the possibility of having previous contacts automatically be displayed upon tabbing out of the call field?

Also, maybe the ability to configure call look-ups, maybe after hitting the enter key "add" addresses could be filled in per the callbook, but a subsequent enter key would actually log the contact - giving you a display of the information prior to actually saving it?

Have you experimented with the using the database downloaded from the FCC site as a local callbook so you don't need to go out on the web for look-ups?

Thanks,
Joel - WA1ZYX

Hi Joel...

> What is the possibility of having previous contacts automatically
be displayed upon tabbing out of the call field?

Have you tried right-clicking on the call field? You can pick
the "Display All Entries for Call" menu item. Also, when there
are "dupes" the 10 latest QSOs are also displayed in the popup menu
and if you select one of these items that QSO will become the current
entry (assuming you aren't in the process of editing the current
entry).

> Also, maybe the ability to configure call look-ups, maybe after
hitting the enter key "add" addresses could be filled in per the
callbook, but a subsequent enter key would actually log the contact -
giving you a display of the information prior to actually saving it?

I think the "Edit/Set Fields from Callbook" (Control-F) menu item
will do what you want. If you don't like the values, pick "Cancel".

> Have you experimented with the using the database downloaded from
the FCC site as a local callbook so you don't need to go out on the
web for look-ups?

One XMLog user has provided a means to do this, check:

http://home.earthlink.net/~ekdave/callbook.html

Note that this method replaces the interface routine for the RAC
callbook (RACCD32A.DLL) so the normal RAC callbook won't be available
unless the original file is restored.

Hi Mike,

I had sent you a message earlier in January about the possibility of having a tone sound when the call you are entering was already in the log. I don't know if that message got lost or something but I never heard anything back. This would be a very nice feature for those of us who are blind since it would be an instant cue that we had worked the station before. I, for example, am totally blind so no color change would alert me to this situation. Would this be possible or is it simply too difficult?

Thanks much and very 73.

907. band info on parallel port

Yahoo group: XMLog
Date: 2004-02-09 06:04:41 UTC
From: zamba0321
Topic: 907 Message: 907

Hi Mike et al

I was not sure if Xmlog puts out the band data on
the parallel port like some other programs do. I'm looking
into a way to control an automatic antenna switch this way perhaps.

The band is identified by a binary number on 4 pins of the
parallel port.

some info here:
http://www.qsl.net/ok1rr/bandsw.html

908. Still a problem

Yahoo group: XMLog
Date: 2004-02-09 15:06:08 UTC
From: fazamy2003
Topic: 908 Message: 908

I'm using v. 4.56. My previous post regarding solution to keyboard cw and keying TS-140 was bogus. (I believe.) I consulted the schematic provided. I hear sidetone, but tx does not key. (Other aspects of logging program work.) I want some specific advice on how to key TS-140 with keyboard --everything that is necessary for it to work. Be specific. I don't mind a dumbed-down explanation.

Thanks,
KB2AMY

I don't know what your set up is but I have a TS-140 that keys up my preset messages from the Control F* and when I hit Control F11 whatever I type on the keyboard is sent out immediately. Can you transmit the preset messages with the lower F keys?

>
> Nelson K8DJC

Regardless of what I do, the tx doesn't key -- prepared or actual
messages.
I wish to go over a couple of things wid u regarding your setup.
1. How did you wire up from pc to rig? I assumed on the schematic
that the plus and ground connections were for the phone plug for the
key jack. So I wired a 1/4" mono plug accordingly. Was I right?
When I use my straight key and keyer via the phone jack in the back
of the rig my meter shows output when I hold the key/paddle down. I
get no output action on the meter when I keyboard. Just sidetone.

I worked a guy a couple of years ago who told me his keyboard setup
went thru his mic connector and he transmitted keyboard cw on ssb. (I
don't recall what kind of rig he was using.) I tried a similar setup,
and the only way I got qsos was when my mic picked up the sidetone on
the pc speaker and transmitted it on ssb. I don't think this is
right.

That's why I'm confused.

911. XCW XP Problem

Yahoo group: XMLog
Date: 2004-02-09 17:24:03 UTC
From: Tom Sessions
Topic: 911 Message: 911

On 2 of my computers I have XCW running under WIN ME. I previously had the same computers running WIN XP and could not make XCW work. XMLOG works fine on both machines under either XP or ME.

Using a friends computer under XP, we also could not get XP to run XCW, even though once again XMLOG worked just fine.

Anybody else having difficulty getting XCW to run under XP? Anybody found a solution?

thanks / 73

This issue has been addressed so many times on every ham-radio related reflector/mailing list I have lost count. I don't/won't use XP but I've read the solution so many times I've almost committed it to memory. There is a utility which must be loaded called port95nt.exe. It will allow you to directly access I/O ports from inside XP. I've never used it, I don't know how it works, but I know this has been the recommended solution.

I don't know if this is your problem; but when I have
used other applications, WSJT specifically, the
transceiver keys as soon as I start XCW. I found
something of a solution accidentally. I have MMTTY
and MMSSTV installed, and opening either one of them
cures the problem. All I have to do is open them and
then close them, it is not necessary to transmit.
Hope this helps. 73, Phil - N1KI

This "solution" has been tried on all 3 computers we have tried on both LPT and COM ports and has proved useless. Not only that, we are using the COM ports with SSTV, Writelog, etc.

Topic: 907 Message: 915

Hi Wim, Interesting thought and thanks for the link. Unfortunately for Windows NT/2K/XP direct control of parallel ports is a pain and most programs solve the problem with a pseudo-device driver like DLPortIO, etc. I'll add the suggestion to the "to do" list.

Hi, What I've done with my Kenwood 950 is add a little reed relay to the keying circuit to remove any positive/negative keying questions or questions about resistance to ground. I used a relay from Radio Shack and put the coil in the B+ line.

I also used a Radio Shack reed relay. They had a 12-volt one
and a 5-volt one, and I wanted to power it with a 9-volt
transistor radio battery-- it switches the nominal 12-volt
one just fine.

918. Re: Still a problem

Yahoo group: XMLog
Date: 2004-02-10 19:03:36 UTC
From: witstock7
Topic: 908 Message: 918

I use the keying circuit as found in the Transmitter Keying Circuits in the Help section of XMLog. I built it into the DB-25 male connector using the LPT Port configuration. The + wire goes to the tip of a standard headphone plug and the ground is the shield of the wire and connects to the shield connection on the phone plug. This could go into the key jack of the TS-140 but I put it into a jack in my home made keyer. My keyer (from QST Sept. 79) has two inputs - the paddles being connected permanently and the cable from the computer into a jack for a second key. This gives me the option of switching instantly between hand key and computer keying.

Hope this helps,
Nelson, K8DJC

There are 2 schematics in the Help section. I originally used a nine pin connector w/o success.

Then I used the 25 pin connector as you did, and at least I got the send (on air) light to come on and got meter deflection but no keying.

I've been using the first schematic -- the one with the dtr, ground and plus connections. To which schematic are you refering in your previous post? The second schematic has select, plus, and strobe connections.

Thanks & 73

Topic: 908 Message: 920

I am using the LPT port configuration which is the second schematic. It is constructed inside the male 25 pin DB-25 connector. Maybe you should replace the transistor to make sure it is still functioning. My printer now goes through a USB port. It has worked for me right from the start. Keep trying, it is certainly a nice feature.

Good luck'

To all those why tried to help me with my problem of not getting XCW to run under XP. THANKS!

Finally it is working under XP on one of my computers. For the ?? time I cleaned XCW out of my computer, downloaded the XCW zip file, unzipped and loaded. This time it worked and I do not know why. Probably operator error, however I never had a problem with XCW under WIN ME. No, the problem had nothing to do with recognizing ports, as my computer has always acknowledged a COM port, and has been using that com port under XP with MMSSTV, Writelog, and others even when I could not get XCW to run.

922. Install from floppies

Yahoo group: XMLog
Date: 2004-02-13 18:47:58 UTC
From: CyberGeezer
Topic: 459 Message: 922

Been a happy user for years on my desktop machine.

Just acquired a laptop machine with no internet connection, so I tried to install XMlog from floppies. I ran FLOPPIES.BAT on my desktop machine, and it made 5 diskettes which I carried over to the laptop machine, where I ran SETUP from disk 1.

It had me put the five floppies through several times. I am now hung up at a message box headed SETUP MESSAGE and containing
Please insert the disk labeled "Disk 1" into drive A.
I do that, click CONTINUE, and goes DING and displays the same box again.

NOTES:
1. That box is on a blue screen labeled XMLog setup
2. My desktop machine runs Windows 98.
3. My laptop machine runs Windows 98 SE.
4. This is my second try at this, with a different set of floppies for each.

Any ideas?

I suspect that your problem is trying to run setup from the multi-floppy set. Surely it would be better to copy all the disks to a single file on the laptop then run setup from the copy on the version on the laptop hard disk.

I don't know floppies.bat, but WinZip can copy large files to a multi floppy set and unzip them to the new location. If the laptop has a CD and you have a CD_R drive on your main computer then you could copy the file using a CD-R which would be a simpler way.

Hi everyone,

Sure hate to call on you guys for help, I recently purchased BuckMaster
HamCall CD-ROM.
having problems with the Callbook setup location popup window, I type in
C:\HAMO, but error
comes up "Callbook not found in C:\HAMO" Callbook type: I check off
(BuckMaster) I also
did what Help instruction told me to do, what am I over seeing?
I have the XMLOG 4.56 version and latest version of HamCall CD-ROM February,
2004.

I assume that Hamo and Hamcall are both folders on your C drive.
Check QRZ.com and see if that works on the internet. I switch back and forth all the time.

Topic: 927 Message: 933

Hi Herb - In the callbook setup you should pick Buckmaster and just supply C: as the location, sounds like you've done this. The folder name on the C: drive should be HAM0 (that's HAMZero, not oh). You should copy all the .idx and .dat files to this folder. If this still doesn't do the trick you can try the latest XMLog version in www.xmlog.com/beta which has a new DLL from Buckmaster that includes searching of the "monthly update" releases. Hopefully the old DLL will read the newer CDs but if the update fixes things let me know. When using the new version you should copy any "monthly update" .idx and .dat files you have to the HAM0 folder.

You could SELECT the entries you want to delete by, say, doing
a search with a search key of >12/01/03 in the date field.
[While they're selected, you might want to export them to an
ADIF file if you have any use for them.]
Then, on the EDIT menu, click DELETE SELECTED ENTRIES, and
they'll be deleted from your log file.

You can do this yourself by editing the files 'prefixes' and
'prefixes.new' with Notepad.

942. Re: Duplicate QSOs

Yahoo group: XMLog
Date: 2004-02-26 12:13:46 UTC
From: lz1bb
Topic: 838 Message: 942

I had the same problem. The answer seems to be that when XMLog imports
from MixW and other loggers it receives <TIME:> as 6 digits hh.mm.ss
and as XMLog do not use seconds the time is actually changed. If you
import again from the same log to update the data base this same QSO
is not recognized as already imported.

Example: ...MixW export <TIME:6>020202 and XMLog import becomes <TIME:
6>020200
next time it is again a new QSO for XMLog.

Hope you understand and sorry for my primitive English.

73, Harry LZ1BB

OK, I've done some testing here and XMLog already ignores any seconds provided in the ADIF TIME_ON field when checking for duplicates. I tried creating a MixW ADIF file and importing it twice and the duplicate was detected correctly.

That's a handy URL, Don!

Do you happen to know of any fonts that just print OUTLINES of
the characters? I'd like to use such a font in a large size
for my call on QSL's.

(I instinctively want to call that an "outline font", but I
believe that's a technical term referring to the way a font
image is stored and can apply to any typeface appearance.)

> Hi Gerry - Does it say which DLL it can't load?

First things first-- I want you to know that I do notice the high level of support you provide, and I do appreciate it.

Further to my last message on the 1.27 problem-- I tried a new download and a new install.

My only way in to the old laptop machine is via floppies, so I DL'd 1.27 to my desktop machine, ran FLOPPIES.BAT, and carried the two floppies over the the old laptop.

I tried copying all the files to the hard drive and running setup.exe from there. I got a version that got erriors trying to start.

I deleted everything from the HD directory and ran setup.exe from the floppies. I got a version with the same problem I originally reported (can't open or create any log files).

An interesting thing-- in BOTH methods of running setup, it first reported "General Copy Error" trying to copy VBRUN300.DLL to windows\system; I hit RETRY and it seemed to get by that successfully (the progress bar graph thing indicated that VBRUN300.DLL got copied). The VBRUN300.DLL in windows\system is dated 07/11/1995, same as the DL_ that came in the download.

I certainly don't expect you to spend much time looking into this old version, but I hope something might pop into your mind.

Gerry -

I have not been able to find a satisfactory scalable "outline" font (if that is incorrect terminology, then my apologies to the purists, but that is exactly what I call it :-o). If anyone on the list knows where such fonts can be found, I would certainly be pleased to know about it.

Here is a site where you can create a specific short text (such as a callsign) in one of many font style and color combinations, then download it as a graphic file for possible use on a QSL card:

http://www.flamingtext.com/

I love QSLs with huge "fat" callsigns and was enthusiastic about creating my own card in that way - until I found out how huge fat letters gobble up ink! Outline fonts would be a far better solution.

73 and Good Luck - Don N4TN

(Apologies for getting off the subject of XMLOG here)

Thanks!!

I looked at that hollow font ("BlueShooz") and nearly adopted
it, but decided it was just a little too "funky" for my (very
staid) tastes.

I poked around and found a hollow font called Cimier that I
will adopt.

From: lz1bb
Topic: 838 Message: 959

Hi Mike,

Think I did not explain it properly due to my English. Will try again.

Actually the problem is not in XMLog but other logging softwares. If you only use XMLog for master data base and main logger who collects data from other softwares via ADIF export/import there is no problem at all. Thats why your test was succesfull. The problem is mostly vissible in the following example:

Today I use MixW and after each QSO export ADIF from MixW and do import with XMLog. No dupes, XMLog recognising previous QSOs each time. Later I change to other PSK31 software with built in logger and do the same. Again no problem.

If a few days later decide to use MixW again I sure will want to have the most compleat QSO database in it. For this purpoce I EXPORT ADIF from XMLog and do import with MixW.

Here the problem appears. A QSO exported from MixW with time <TIME_ON:6>020202 was converted from XMLog to <TIME_ON:6>020200 and when turned back to MixW it is not recognized by MixW, and all others, and it is duped. In next export from MixW to XMLog this dupe is transfered in XMLog.

As many others like me uses and experiment with different softwares and use XMLog as master QSO Logger and QSO Data base this problem is common.

I think the simplest sollution is XMLog to keep exactly the time as it was imported, and if XMLog export that QSO back again to send the UNCHANGED time.

If imports <TIME_ON6>020202 XMLog should keep it and if ever exported back again in ADIF XMLogs's ADIF should be <TIME-ON:6>020202. NOW it is always changed to <TIME_ON:6>020200

MixW to XMLog, no problem.
MixW to XMLog to MixW - problem.
MixW to XMLog to MixW to XMLog - problem because XMLog actually change the data, the time in particular. (MixW is only an example it is the same with all other loggers that care SECONDS in <TIME_ON>

XMLog just needs to be compatible in this aspect with other loggers and it is just to care and not to change THE SECONDS of <TIME_ON>.

I do apology for my English. Hope I explained this time in a proper way.

Mike,

I studied several Loggers and it seems that they only compare
<TIME_ON> before decide whether it is dupe QSO or not. Perhaps that is
the reason the seconds are so important for them. Logger by K4CY for
example do not accept two QSOs with exact the same time when make not
a real time data enter. You have to change the time at least with ONE
SECOND for the second QSO to be accepted.

If you mean you'd like to change just the "0" of an existing font to be slashed? I'm sure this could be done, tho I don't know how difficult. Try googling "font editor" - I once saw something like that, but it was so long ago I don't remember the name of it.

From: Mike McAmis
Topic: 838 Message: 963

Hi Harry, I tried exporting the QSO back to MixW and I did see the two QSOs there because the seconds had been lost. Then I exported from MixW and got a file with two QSOs (one with seconds and one without). I then imported this file back to XMLog and since it ignores the seconds it considered them both to be dupes so it seems to be working correctly.

There must be something else happening here... perhaps it's due to a change since the last standard version (4.56). You can try the most current version at www.xmlog.com\beta.

Mike,

The same results like yours with v4.69. That is fine.

Before make version 4.69 official could you impliment seconds checking/using in <TIME_ON> of XMLog? Anoing to double the MixW log when updating its data base. Every time before importing from XMLog I have to delete all QSO of the MixW's logger.

I think this change will help others like me and QSL managers with both parties using different logs. Though XMLog is excelent.

If it is difficult from programer's point of vew please ignore.

967. Power field

Yahoo group: XMLog
Date: 2004-02-29 11:26:32 UTC
From: lz1bb
Topic: 967 Message: 967

Hi Mike,

My final decision is to switch on XMLog. That was the reason I spent a lot of time the last few days in transfering QSOs from different software and paper logs.

Traying to enter my QRP QSOs I discovered that Power accepted by XMLog is between 1 and 1500 Watts.(Even the Help sayes that.:)).

I was unable to enter my 500mW QSOs. I do have a lot of them down to 10mW. As the log will be of interest to other QRP funs too, could you change that. Perhaps any Power>0 will be OK so we could log:
0.1 for 100mW
0.01 for 10mW and even
0.00001 for10nW.

I checked several other logging softwares. They all accept 0.xx Watts, so XMLog will be compatible with them too.

I know at least several people experimenting with milliwatts. And FT817 can go down to 500mW.

Thanks for understanding!

971. Re: Cabrillo format

Yahoo group: XMLog
Date: 2004-02-29 17:31:14 UTC
From: Mike McAmis
Topic: 968 Message: 971

Hi Gerry,

I have looked into supporting Cabrillo format but since not many folk use XMLog for contesting there hasn't been much interest. Most people (myself included) use a contesting program like CT or WriteLog and then import those logs into XMLog when the contest is over.

The reason that most day-to-day loggers like XMLog don't do well as contest loggers is that they don't support the unique fields required for the exchanges (section, serial numbers, etc). This means these fields can't be identified when exporting them in Cabrillo or ADIF format. This doesn't mean it's impossible, one ham that didn't want to pay for a contest logger took this route - he puts the contest exchange in the Notes field and when the contest is over he exports the log as ADIF. He then wrote a little program to hack the ADIF file to extract the exchange info from the Notes fields and add the appropriate ADIF fields. Finally, he converted the ADIF file to Cabrillo using LogConv.

LogConv is a nice utility from KA5WSS which can convert ADIF files to Cabrillo format. It also does many other logger/ADIF/Cabrillo conversions. You can get LogConv at:

http://www.qsl.net/ka5wss/logconv/

Mike,

Thanks for prompt answers and support. This is one of the reasons XMLog is my official shack QSO keeper now!

Every one of us could see the features and performance of XMLog.

I just want every one knows that Vlad LZ1OT, very good friend of mine, uses XMLog since the very first Win 3.11 versions. Upgraded within the years to v4.69. He keeps more than 30,000 QSOs database on his XMLog, he uses it every day and HE STILL DOES NOT HAVE ANY DATA DAMAGE!!!!

BTW LZ1OT is a QSL manager for several well active DX statios.

Thank you Mike for all. Regards to your family too. We all know they helped in some way also!

974. QSL layout-- margins changed in v4.69

Yahoo group: XMLog
Date: 2004-03-01 04:10:03 UTC
From: CyberGeezer
Topic: 974 Message: 974

I use the QSL label feature to print my QSL cards, four to an 8.5x11 sheet of card stock.

The first ones I printed from 4.69 were registered a bit differently on the card stock, using the same layout that I had been using in several versions up through 4.56.

I'm not looking for a "fix" on this, as I have adjusted my layout accordingly. Rather, I intend this as a heads-up to other users-- the first time you print QSL labels from 4.69, don't do a big batch of 'em; do one or a few and check 'em.

975. Font color problem on QSL labels

Yahoo group: XMLog
Date: 2004-03-01 05:10:25 UTC
From: CyberGeezer
Topic: 975 Message: 975

Hi Mike--

On my QSL cards I have some text fields that I used to print
in maroon.

I recently changed them to a different font, and I changed the
font color to black.

The font change "took", but all that text still prints maroon.
(Not a major problem.)

Incidentally, this problem occurred under 4.56, and I still
have it under 4.69.

Previously, I wrote:
> The font change "took", but all that text still prints
maroon.

I'm at my wits' end with this problem. I got two of the
fields to print black (I don't think I did anything different
to those fields than I did to any others). ALL of these
fields SAY they're black when I view them in Modify mode, but
most of them continue to print maroon regardless of that.
They're DETERMINED!

Any ideas appreciated.

In the meanwhile, I'll take the two fields that actually
turned black back to maroon, just for consistency. Groan!!

Guess what?-- that wouldn't work either-- those fields
stayed black though I "changed" them to maroon.

I've now changed all those fields to blue, and that worked.
Now I've got a card that's consistent with itself and I'm not
in dire need of a solution.

Hi Burton, There seems to be some problem with the diskettes created using the floppies.bat file. Try this - create a temporary folder and copy all the diskettes to that folder and then run setup.exe from there. You can delete the temporary folder after the install is complete.

Topic: 982 Message: 982

Subject: Rename F-11

This morning I was using mlog in a configuration I don't normally use. I turned on voice announcements and then laid down. The XF4 was spotted on 40m. I don't need XF4 on any band but because I live in a new state, since the last XF4, I decided to work him. Should be a slam-dunk on 40 from Arizona. I sat in front of the radio and pushed the F-11 key to put mlog in the pileup mode. Well it turns out the F-11 key should be renamed 'THE MASS CONFUSION MODE'. It seems voice announcements take priority over CW sending. When a voice announcement starts CW sending stops immediately and the resumes immediately after the voice announcement finishes. In a massive pileup, like this morning, if you don't have total control you are just wasting time. Needless to say my charming, warm, wonderful personality took over. After an appropriate number of epitaphs I turned off the radio and computer and went back to bed. I'm going to do some testing tonite to see if there is a work around other than turning off voice announcements. If anyone has suggestions I would like to hear them.

Hi Scott, To search for all 160 meter confirmed QSOs do a log search with 160m as the frequency field and != as the QSL Received field. To get the unconfirmed QSOs use = for the QSL Received field. If you want to limit it to just U.S. QSOs also include W as the Prefix field. See the "Searching the Log" section of the help file for more info.

Hi Gerry, There's a long standing bug in the Visual Basic runtime that causes these color problems - unfortunately it doesn't look like it's going to be fixed any time soon. From the bug reports it seems to depend of the Windows version and the printer driver being used. It also depends on which kind of items (and colors) are being drawn before the one which isn't being drawn in the correct color. By deleting an item and adding it again you're changing the order in which the various items are drawn and thereby affecting this bug.

Interesting!

Just out of curiousity--
--I notice that if I SAVE a layout and then come back into it,
the items list as being sorted on TOP value. I take it that
only affects the order in which they're listed, and not the
order in which they're drawn?

I am one of those who detest the default for everything to be put into C:/ProgramFiles and usually change it to where I want to put the program. Thankyou Mike for not following the herd.

The same Microsoft mentality causes everybody to put all their documents in MyDocuments where all the viruses and trojans can easily find them....

Note that the .log files although fairly large themselves compress
significantly if you put them into a WinZip .zip file. You can
comfortably keep those on floppy.

1008. Re: Combining XMLog Files

Yahoo group: XMLog
Date: 2004-03-09 15:45:45 UTC
From: Mike McAmis
Topic: 1003 Message: 1008

Hi Burton - The best way to combine log files is to export one file as ADIF and then import it into the other file using the appropriate "Import" menu items.

The correct syntax for searching for a range of dates is:

>=03/06/04,<=03/07/04

Check the "Searching the log" section of the help file for more details.

Thanks Mike. It worked just like you said. I built some temp files
and practiced. I worked with logical operators in the early 80s
within dBase II and III+, but I guess my senior moments are getting in
the way of logic.

Thanks,

Burton - wb6cyk

Hi Don, Someone who had my email address in their address book must have been infected with a virus. For the last couple of weeks I've been getting emails from servers letting me know they've blocked my infected emails (which I never sent). I'm sure you noticed we got a couple of bogus messages from w1ect posted here as well. Various virus checkers give my own machine a clean bill of health so I assume some other infected systems have been spoofing my email address.

1013. XP and XCW....again :)

Yahoo group: XMLog
Date: 2004-03-24 00:16:07 UTC
From: rcher
Topic: 1013 Message: 1013

I know this issue has been discussed quite alot, but I have an odd situation that I need an answer to. I have been using XMLOG for a couple of years now and love it. My new laptop runs XP Home and has no serial port. I use a Belkin USB/Serial adapter and the log portion works fine with the virtual COM port. I am uanble to get XCW to even load. I get the "usual" error message when I try to start XCW.

All I want to know is if anyone can tell if I can, or how to, get XCW to operate properly with this configuration. I have an interface cable for the LPT port that worked with WIN 98, but XCW won't even load so I cannot say whether the cable will work or not. I'm pretty sure it will work if I can get XCW running.

Am I butting my head up against a wall? I have tried loading XCW without either cable, serial or LPT, connected to the laptop and XCW still won't load. I could sure use some help here. Thanks in advance.

I struggled with a similar problem for months with XP. Previously I had been using WinME with great results on both XMLog and XCW. But with WinXP I just could not get XCW to work. No one seemed to know the reason why.

One day when I was trying various folder placements of the xcw zip file and the unzipped file thereof- all of a sudden it at last worked! Problem is, I can't remember the details of the success.

So for me, experimenting with various XCW unzipped locations in the mlog folder and subfolders finally got it going. Wish I had kept records of my procedures! However, there are only a few subfolders in mlog.

C:\Documents and Settings\Owner\Desktop is where the application file MLOGXCW is located on my C: drive. (MLOGXCW is the application file that runs XCW)Please note that that is the application file itself, not a short cut to it. It somehow got unzipped, or moved, into that directory. I probably was frustrated at the time and wasn't really paying attention to where the zipped file was going!!!

Maybe the key was to NOT zip the original download inot the mlog folder? Maybe?

Hope this helps. Ask again if you want. I remember thre frustration!!! Good luck. Please let mre know what happens.

1026. CW @ character

Yahoo group: XMLog
Date: 2004-04-02 05:23:42 UTC
From: David Spoelstra
Topic: 1026 Message: 1026

It was bound to happen. A guy asked for my email address in CW and I happen to be using the keyboard mode in XMLog. Trying to be cool, I used the new @ character in my email address. To my dismay, it sent SK!

Well, the @ character is really new, and I should have guessed it wasn't implemented yet.

If we want to use the new @ character, we will have to redefine the current @ character which sends SK. I looked through all the CW charts, and it looks like * is not defined in CW and is not used for something else in XMLog.

I propose that we make @ be the new @ character (.--.-.) and redefine SK to be *. (BTW, an easy way to remember the @ character is AC - it looks like an A inside a C.)

Of course, this is just a request. I fully understand if you don't want to go to all the work to implement the @ character.

Thanks again for an awesome logging program. I use it everyday!
-David/N9KT

From: Kevin Nathan
Topic: 1033 Message: 1033

Hi All,

I recently upgraded my computer system and am now running Windows XP Home edition. When I set up XMlog on it I got a shock when I tried to run my CW port as lpt1. Apparently Windows XP won't allow such use of the parallel port. I am already tying up com1 with my TNC and I am using a USB to serial conversion cable to run the radio from XMlog and this identified itself as com4 on installation. Can anyone suggest a solution here. If I run another USB to serial cable will I have IRQ problems or are those a thing of the past?

Thanks much for any suggestions and very 73.

Kevin :)

1038. Selecting /narrowing entries for uploading to LotW

Yahoo group: XMLog
Date: 2004-04-10 03:48:28 UTC
From: k0amznco
Topic: 1038 Message: 1038

Is there a way to select a range of dates to convert to adif for
uploading to either e-qsl or LotW without uploading the whole log??
Thank you.

1039. Re: Selecting /narrowing entries for uploading to LotW

Yahoo group: XMLog
Date: 2004-04-10 07:03:05 UTC
From: David Spoelstra
Topic: 1038 Message: 1039

In the Search mode, put something like:

>=1/1/88,<=1/31/88

in the Date field. This string means greater than or equal to 1/1/88
and less than or equal to 1/31/88. In other words, it matches the
month of January 1988. You can find further search info in the help
menu. Now click the Search button.

XMLog will now show the matches to your search. Now
choose "Import/Export" in the menu bar, then "Export ADIF File" and
select "Currently selected log entries" in the popup dialog.

Hi Bill, The Argonaut-II is supposed to use the ICOM rig control commands so I'm not sure what the problem is. Perhaps it doesn't follow the specs 100%? Try this, go to the "Options/Log Options" menu and temporarily change your callsign to RIGDEBUG then do something simple like right-click on the Frequency field of a new log entry and pick the "Get Frequency from Rig" menu item. Let me know what commands/responses get displayed.

Thanks Mike:
(this is an Argonaut V)
Changed my call to RIGDEBUG
did ctrl-a
right key on frequency 'get freq from rig' which returned
hex: 3F 4D 0D
string: ?M
(click OK)
000: 3F 4D 0D
000: 063 077 013
(click OK)
"RIG GET MODE
RIG RESPONSE FOR GET MODE TOO SHORT,...
RECEIVED 3, EXPECTED 4"

back to you Mike..

tnx Bill, k2ufc

OK Bill - First, XMLog always gets the mode+frequency when doing a rig query so that's why you see the "Get Mode" info first after doing the "Get Freq from Rig" request. The command being sent is the correct one for the Argonaut-V and it's interesting that the command just seems to be being echoed back. Are you sure your cable is set up properly? Have you tried using some other program to control your rig?

1046. Display/Show QSOs Window

Yahoo group: XMLog
Date: 2004-04-21 21:49:56 UTC
From: Mike McAmis
Topic: 1046 Message: 1046

Several people have asked for a way to display a list of previous QSOs with calls that match the currently displayed call in the log window. The latest beta version available at www.xmlog.com/beta has a new menu item "Display/Show QSOs Window" that displays a new window that shows a list of all QSOs that match the currently displayed callsign. This list is automatically updated when a new log entry is displayed or the currently displayed call is edited.

You can double-click on any entry in the list to move to the corresponding log entry.

The format for the info is the same as the QSOs list displayed in the Callbook Lookup window.

Let me know what you think.

Mike - W1ECT

OK Guys here's the difference. This new window lingers around and
the entries displayed in it are automatically updated to display the
appropriate QSOs whenever the call in the main log window changes.
No clicking or menu selections, etc., are required.

Hello to all readers
This is my first posting or call for help.
I have just spent a couple of hours playing with this program. From what I can see and make of it I think it will do me just fine.
What I need help on is that I cannot figure out how to save the information in the log program. I open new logs and entered the information of my contacts etc however I can find a save button or anything that looks like a save button. Any help would be greatly appreciated.

It's saved automatically

> .... I open new logs ...

I can only conjecture that perhaps you misconstrue the meaning
of "old" and "new" logs-- in the command "OPEN OLD LOG" the
"old" mustn't be taken too literally, but simply means "open
existing log".

In other words--
--let's say you create a new log named MYLOG and make some
entries to it;
--those entries are automatically saved in MYLOG.LOG. You can
just exit XMLog without any overt "save" operation.
--next time you enter XMLog, open MYLOG with the OPEN OLD LOG
command, and there will be your entries!

Or did I misapprehend your question?

Hi Tom, As soon as log entries are entered or edited the changes are applied to the log file - no explicit "Save" is required.

1061. Award tracking options "stuck" in v4.75??

Yahoo group: XMLog
Date: 2004-04-28 21:56:31 UTC
From: CyberGeezer
Topic: 1061 Message: 1061

Switched recently to v4.75 and very happy with the past QSOs window!!

Whenever I enter XMlog it's displaying award tracking, though I have this deselected on the OPTIONS/LOG OPTIONS menu.

Since I have
ALWAYS SHOW QSO INFO FIELDS
and
ALWAYS SHOW ADDRESS FIELDS
selected, the unwanted award tracking fields make the window too long for my screen and I can't see the SELECT button.

To get rid of award tracking I click OPTIONS/LOG OPTIONS, and then click SAVE despite not having changed anything.

Topic: 1061 Message: 1062

Gerry -

You can beat this rap by not checking ANY of the three "Always show..."
options under
log options. Doesn't seem logical but it works for me - that is, with
all 3 unchecked,
XMLOG comes up with only the 'QSO Info' panel displayed. (4.75)

Hi Dick, XMlog checks the spot comment for a mention of the mode like RTTY, PSK, etc. The only way you might influence this action would be to define a custom data mode using "Edit/Define Custom Mode" but this would only help if new modes are being mentioned.

Date: 2004-05-01 22:14:20 UTC
From: ac6wq
Topic: 1066 Message: 1066

When I enter the QSO info into the log window, I can't find the STOP button to add the QSO info into the log. Is it possible that its at the very bottom of the page and I cant see it on my screen? I got the rig control and all other features set up OK in minutes. Thanks in advance....Rob WA6RE

From: Mike McAmis
Topic: 1061 Message: 1068

Hi Gerry - Seems as though the advice to unset all the "Always Show" options is the way to deal with this problem. There are two ways you can get in the situation where all three groups of info (QSO Info, Address, and Awards) are showing resulting in a window so tall it extends past the bottom of your screen. 1) If you pick "Always Show" for two groups while the third group is showing this will result in all three being displayed. 2) If you pick "Always Show" for two groups and then select the "Show" button on the lower left of the screen this results in all three groups being displayed.

If you can't fit all three groups on your screen at once you should only pick one "Always Show" option. (Or increase your screen resolution!).

Mike - W1ECT

Yeah, but--

--I don't do either of those;

--I didn't experience the problem until I got v4.75.

From: Mark Marsden
Topic: 529 Message: 1070

Hi Mike & group

I'm having problems importing CT.RES files into XMlog. The .RES files are from CTWin 10.01.003, the XMlog version is 469 & the OS is Win XP.

XMlog imports the correct number of QSOs but the fields are messed up. The dates are wrong, the frequency is either ? or 144.000 and CW reports are 59 (not 599)

Could it be that XMlog is expecting a CT v9 RES format? Any help would most welcome.

CT Version 10 is a special monster. The CT web-site will tell you CT 10's file system is completely different than any previous versions. Your best bet is to download the new C2A file, from the CT site, and convert your CT files to ADIF and then import them as an ADIF file. I've been doing it and it works just fine.
Good Luck.

Thanks for the advice. I've been using C2A to create ADI files successfully. C2A works on the .BIN files, unfortunately some of my CT.BIN files were inadvertantly overwritten, and all I have to work with from these logs are the RES files. (To make matters worse CT's R2B10.EXE, the RES to BIN convertor v10, does not work.

OK back to my original response. My, educated, guess would be the CT 10 RES file would be radically different also because of the additional fields, and reorganizing the old fields. I have not seen an announcement from 'Mike' that he has done anything with the new CT 10 RES file.
Good Luck

1084. Quick question from a relatively new user.

Yahoo group: XMLog
Date: 2004-05-31 01:46:50 UTC
From: jon_knodel
Topic: 1084 Message: 1084

Hello all,

I have been using XMLog for the past few months and have been entering all of my old contacts (from the past 13 years) into the log. I would just like to say that this is by far, the best logging program that I have found so far. It is exactly what I have been looking for in a logbook. My only question is...is there a limit to the number of log entries you can make in one file? Ideally, I would like to enter EVERY contact that I have logged on paper into one XMLog file. I'm sure this will be thousands (tens of thousands?) contacts and I would just like to know if the program can support this many entries in one file. I would greatly appreciate any help I can get on this. Thank you very much.

Jon, N7XW

Hi Jon, XMLog use Microsoft Access databases to store log entries so there's no practical limit. I've seen logs with 85,000 entries that work fine.

1086. Current date and time feature?

Yahoo group: XMLog
Date: 2004-06-01 00:45:23 UTC
From: David Spoelstra
Topic: 1086 Message: 1086

Once again, thanks for a great program!

I convinced my club to use XMLog this past weekend for a special event. Everyone loved it except for one thing that I wonder if you might consider adding.

We used the defaults for time, date, frequency, and mode. That way we only had to type in the callsigns.

The problem comes when you are running stations. When you are working them fast and furious, you just type in the callsign and hit enter - everything is fine. However, if five minutes goes by and you enter the callsign and *forget to update the time*, then it logs the QSO as happening five minutes previously.

What we need is a "set the time and date when you enter the QSO into the log" feature.

Hi Jon - Thanks for the compliments but I must admit there are lots of reasons that XMLog isn't an ideal contest logger. Most XMLog users (including myself) use some other program (WriteLog, CT, or N1MM logger which is freeware) and then move the QSOs over to their log file using ADIF. This is probably the best strategy regardless of the program you use to do your day-to-day logging.

1090. Steppir Antenna Interface - Feature request?

Yahoo group: XMLog
Date: 2004-06-04 03:27:00 UTC
From: Dave Quick
Topic: 1090 Message: 1090

Has anyone ever used XMLog interfaced with a Steppir antenna?

When you double-click on a DX spot in XMLog the program sends a command to the rig to QSY but never polls the radio for frequency data.

According to Steppir's documentation, the Steppir control box only listens to data from the radio, not commands send to the radio. Is it possible to configure XMLog to poll the radio so the Steppir will adust itself to match the frequency of the rig, or is this a feature that that W1ECT would have to add?

1091. More publicity for XMLog!

Yahoo group: XMLog
Date: 2004-06-04 20:02:01 UTC
From: David Spoelstra
Topic: 1091 Message: 1091

Hey Mike!

I know a lot of people are using the ADIF output of XMLog to upload
to eQSL. But I notice on the eQSL page:
http://www.eqsl.cc/qslcard/ADIFLoggerInfo.cfm
that XMLog is credited with zero records (I know I've uploaded
17,000)!

So, I sent them an email to ask why. Here's what I got back:

Hello David,

Look on this page: http://www.eqsl.cc/qslcard/ADIFContentSpecs.cfm

If the ADIF tag "LOG_PGM" or "PROGRAMID" is found in the header, and
matches the name we have in our database (in other words, an exact
match
with what is in the Software Title column of
http://www.eqsl.cc/qslcard/ADIFLoggerInfo.cfm), then stats will be
accumulated.

73,
Dave Morris, N5UP
Webmaster, eQSL.cc

So, it looks like the next time you are messing in the ADIF code, if
you add:

<LOG_PGM:5>XMLog

or

<PROGRAMID:5>XMLog

then eQSL will start gathering upload statistics for XMLog and XMLog
can get it's just due!

-David/N9KT

Hi David, Actually the PROGRAMID tag is new to version 2 of ADIF which isn't officially accepted yet. They've been haggling for quite a while without voting to approve this new version. There was (still is?) some disagreement as to whether a tag like PROGRAMID should be within the header (before the EOH tag) or after. If they ever approve the spec I'll change my current header to comply.

1094. Re: Steppir Antenna Interface - Feature request?

Yahoo group: XMLog
Date: 2004-06-07 17:23:20 UTC
From: Mike McAmis
Topic: 1090 Message: 1094

Hi Dave, As you might expect XMLog can get the frequency/mode from the rig when creating new log entries but it also polls the rig when setting memory buttons from the packet window. Try this:
Enable "Edit/Memory Buttons" and the set a memory button by right-clicking on it and then choosing "Rig -> Memory".

Mike - W1ECT

Mike;

Yes, thank you, that works. I set a button to a frequency and when XMLog polls the rig the Steppir controller "hears" the rig's reply and adjusts itself to be resonant at that frequency.

My feature request is that XMLog do the same thing, poll the rig, when I double-click on a spot in the spots map. That way when I start a new log entry from a DX spot the rig and the antenna will both QSY to the correct frequency.

I should clarify: The controller for the Steppir antenna can only listen for data sent by the rig. It won't act on commands sent by a logging program to the rig, and the controller can't poll the rig itself. My PC, rig, and the Steppir controller are connected together through a serial "Y" adapter.

Thanks for you help, Mike. You're doing a great job. XMLog is fantastic!

1096. Log install

Yahoo group: XMLog
Date: 2004-06-11 12:11:31 UTC
From: Phillip Buckholdt
Topic: 1096 Message: 1096

Hi All

I installed XMlog yesterday but, the installation stopped when the
installer could'nt find DAO.msi file. I clicked on cancel several times and
installation finished.
Now when I start XMLog the installer starts and asks for path to
DAO.msi When I click cancel XMLog starts normally.
What is DAO.msi ? I've searched the computer for such a file and the
search comes up empty. Also, I have had several crashes of XMLog.
Anyone have any ideas ?

From: Mike McAmis
Topic: 1096 Message: 1097

Hi Phil, XMLog doesn't try to install this file. I did some web searching using Google and found this interesting note under in the FAQ page for VQLog:

A) This is due to a corrupted installation of Office-2000, even if Office-2000 seems to work OK for you. DAO components are installed also by Office although they are not used unless you access a database from Word / Excel, what is posible but not very usual.

Some ways to fix the problem:

First try selecting "Help - Detect & repair" menu option in any Office-2000 application (let's say Word or Excel) so that Office installer can try to fix the problem.
If this fails, the other option is to use the Windows Installer cleanup utility (msiccu.exe) than you can download from Microsoft (http://support.microsoft.com/support/kb/articles/Q238/4/13.asp)
If this also fails the last chance would be obviusly to completly uninstall Office-2000 and install it again. But I would try first the other two options.

From: Mike McAmis
Topic: 1090 Message: 1098

Hi Dave - XMLog will poll the rig for the frequency and/or mode when creating new log entries if:

1) You double-click on the frequency and/or mode fields of the new entry.

2) You right-click on the frequency and/or mode fields of the new entry and choose "Get mode (or freq) from rig".

3) You select the "Edit/Edit Defaults for New Entries" menu item and enable the "Get Mode (and/or Get Frequency) from Rig" option. Then select the "Edit/Use Defaults for New Entries" menu item to enable the default values.

All version have it. Enter the frequency in MegaHertz (e.g.,
144 or 147.030).

Although you may enter "2m" as a search key, you may not enter
it as a QSO frequency.

Hello Mike,

The ARRL has a bunch of specialty awards in the WAS program, OSCAR Satellite, SSTV, RTTY, 144 MHz, 432 MHz, 222 MHz, 50 MHz, 160 meters and Digital modes. These are endorsements in addition to the normal WAS and 5-Band WAS.

Thanks for considering it and for your great support!

1110. Re: new users problem with KAM (kantronics) connections

Yahoo group: XMLog
Date: 2004-07-31 15:20:27 UTC
From: ldavidll
Topic: 1082 Message: 1110

Ciao Dino,

I have a KAM linked to my local DX Cluster via VHF Radio and working well with XMLog. This is a separate VHF radio, not my main transceiver.
If you look at the *.NOD files in your XMLog folder with Notepad or Wordpad you will see how they are constructed and you can edit one with the address of your own Cluster or BBS etc.
My NOD file is just: " connect gb7mbc " (without the ""). GB7MBC is our local DX Cluster station. It is just the same instruction i would give manually to the KAM to make the connection.
You must (of course) have your KAM port set up properly - see help files.
I hope this may help you.

1111. Can XMLog Control Acom 2000A?

Yahoo group: XMLog
Date: 2004-08-11 23:37:45 UTC
From: k2qmf@juno.com
Topic: 1111 Message: 1111

Hello All,

I am new to the XMlog reflector however I have
been using XMLog for a few years. I am very happy
with the performance of the program. I use it to control
my Yaesu FT1000MP Mk5 Field. I also send CW
from XMLog through LPT1. I have an Acom 2000A
amplifier and would like to be able to have XMLog change
the amps frequency when I select a spot from PacketCluster.
Has anyone done this?? I know that the Writelog program
controls the Acom 2000A using the program "AcomTools".
Has anyone written a "plugin" file or ".dll" file for AcomTools
that will allow it work with XMLog???

Many Thanks for any information or help.

73, Ted K2QMF

Before you can do an import you must create and open a log file. Use
the "File/New" and "File/Open" menu items and then you can also use
the "Options/Log Options" to set that file as your default log file
so that it will be automatically opened whenever you run XMLog.

From: D.W. Jones
Topic: 1116 Message: 1118

I too would like to know if this can be done. I can not imagine a way, since there is only one port on the Jupiter, unless there is some method of passing data directly between XMLOG and N4PY. XMLOG is so much a part of my daily operating that I had to give up on using N4PY. A shame - they are both versatile and extremely useful programs.

1119. Re: [XMLog] Jupiter running N4PY software

Yahoo group: XMLog
Date: 2004-08-18 16:48:14 UTC
From: Don Nesbitt
Topic: 1116 Message: 1119

Hi Don & Mark - I don't have a Jupiter nor am I using N4PY software - so you are wondering why I'm even responding - but, from time to time I do use another program as a "front-end" for XMLog and how I do it might give you or others an idea of how you might solve this problem. This is way way way out of my league but maybe the following will spark an idea in a programmers mind as to how you could do what you want.

The "front-end" program that I sometimes use for spotting is by lee, VE7CC. It is free and you can find the program at: http://www.ve7cc.net

While the "Packet Port" option in XMLog really works well, I just like some of the additonal features of the VE7CC program.

In order to run it with XMLog, you set the "Packet Port" in XMLog to: Port Type - "Internet" and the Internet Auto-Connect Address to 127.0.0.1 (this assumes that you are running both programs on the same computer and not running one over a network.

The following details illustrate the scheme:

First, download, install and set all the parameters in the Ve7cc program that you want to use. Once done, it can be used all by itself as an excellent cluster program. Then to use it with XMLog, start it first and then start XMLog. XMLog will look for 127.0.0.1 and then download the spots from the Ve7cc program using the parameters that you specified. The voice function; click to qsy, etc will operate normally in XMLog. Just a word of caution - don't set the Ve7cc program to automatically download all missed spots if you have the voice function of XMLog turned on - you will have to listen to XMLog announce all those spots before you can gain control !!

According to the N4PY web site, it says that : "You can also run the Jupiter and argonaut V in Front Panel control mode and have the program monitor the operation of the Jupiter and Argonaut V. This allows the software to export a Pegasus file interface to any logging program that can work with a Pegasus. The end result is you can now have full logging control of the

Jupiter or Argonaut V while they are in front panel control."

Now, since I don't use N4PY software and really don't know what the issues are other than having only one "port" on the Jupiter, I'm wondering if you could use a scheme (virtual address??) something like this to connect XMLog to the "spotting" function (assuming there is one in N4PY) or to the "remote control" (rs-232 ??) port of the Jupiter and still have the rig control that you want. Just a thought!

Whew! Maybe this will give someone an idea (other than confirming that this is all way over my head since we already know that!) of how you might get these two programs to work together over one physical port.

I use XMLog all the time and still can't believe how terrific it is. Mike really does an amazing job! (Tnx Mike!) 73 es gud dx --don n4hh

Hi Mike;
I have a question re XMLog Packet window. I am using v.4.35 01/07/02...not current but works fb for me. Recently, I have been having ISP problems and, as a tool, would like to be able to look at the spots window and be able to tell if I am connected thru telnet to the ISP so data will be passed to me in the form of spots. The ISP has just changed physical locations and also their line provider from Sprint (worked fb all the time) now to Cox (only seems to provide spots intermittantly). The problem is that I cannot seem to tell from looking at the computer display if I am connected or have been booted off the telnt connection....other than not getting spots for a long time. I alternately connect to n3ra or n9bms and the problem seems to occure with both. I do get spots from the Internet via oh2aq.
Any way I can tell if I am connected from the packet screen or otherwise? Sometimes it says "connected to 65.42.104.225" for n3ra, and I get spots. Sometimes it says connected etc and I don't get spots and sometimes it says nothing (same bar just above sustray that has time and date)...and I get or do not get spots.
Any thoughts or suggestions? 73/dx

I don't know if this will help. I've posted this solution several times to help reduce 'drop-outs' during periods of inactivity from clusters. This is a very small TSR that will set your computer clock at whatever interval you define. I have mine set for 15 minutes. I think all the time servers are telnet links. The TSR is free and I've used it for 4 years without any ill effects on my computers and no spyware.

Thanks fer the input Mal;
I have "abt-time" running...I don't think that's the problem. The other stuff runs fine just as it ALL did b4 the ISP moved. Runs for hours and hours just like I want it to...so I can see the spots over night etc. But the telnet thru XMLog disconnects often which it NEVER did b4 the ISP move and change of line provider from Sprint to Cox. And it seems to be random and not related to the connection speed. What I wanted from XMLog was a reliable way to tell when I was connected and when I was not. The msg at the lower of in the message bar should tell me that but seems to not do it well. I was asking if there was another way to tell from the screen if I was connected reliably thru telnet to the nodes I choose. 73/dx

From: Mike McAmis
Topic: 1111 Message: 1123

Hi Steve, When XMLog gets a disconnect on an Internet connection it displays a disconnected message in the status bar but it's a "timed" message and it gets erased after a while. I can change this so it stays displayed until the next message comes along.

You can try experimenting with other cluster providers to see if it's the cluster or your ISP that's causing the problem. Here's a couple of lists:

http://telnet.dxcluster.info/

http://www.cpcug.org/user/wfeidt/Misc/cluster.html

Thanks Mike;
As usual, ur response has been timely and good usable info. Currently I use just 2 clusters:
n3ra---65.42.104.225...and...
n9bms---66.84.210.68.
When the ISP was using Sprint as his gateway, I had absolutely zero problems getting throughput (spots, for hours)
from either one of these guys. Then, when ISP changes to COX, even tho I am connected to internet and spots from oh2aq are constant, I am disconnected from either of the above; sometimes after one or two spots sneak thru and sometimes after no spots are rcvd and sometimes I get the spots continuously for hours.
I think that ur idea of leaving the message on the status bar is a good one. I know it will help me in trying to find out what's going on. Tnx fer help

From: Mike McAmis
Topic: 1111 Message: 1125

Hi Again, I rechecked the disconnect messages for Internet connections and I see there is no status bar message at all (timed or otherwise). However any disconnect should result in a "*** Disconnected" message being displayed in the packet window data area.

If you're not getting disconnected then either your cluster node is getting hung up (this happens with the node I use from time to time) or your ISP is getting hung up (you can try "pinging" the cluster address to see if the path is there, go into DOS and type "ping www.whatevercluster.com").

Mike - W1ECT

I vote for leaving the message on the status bar. If you are not watching closely you can miss it and if there is a lull in spots coming thru you don□t know you have been disconnected.

My ISP has a activity timer of 10 minutes, if there is no activity during this period I will be disconnected from my node. You need to set the keep alive for 9 minutes.

Or you need to try connecting to k8smc.com(198.109.212.235:23)This is a AR cluster and Terry has the keep alive activated. During periods of low or no activity a CR is sent every 9 minutes. Works for me.

Hi Again, I rechecked the disconnect messages for Internet
connections and I see there is no status bar message at all (timed or
otherwise). However any disconnect should result in a "***
Disconnected" message being displayed in the packet window data area.

If you're not getting disconnected then either your cluster node is
getting hung up (this happens with the node I use from time to time)
or your ISP is getting hung up (you can try "pinging" the cluster
address to see if the path is there, go into DOS and type "ping
www.whatevercluster.com").

Here's a suggestion: I just checked n3ra and he is running ARC cluster software. Send him a note, either via the cluster or e-mail, and ask him to turn on ping just for your callsign. The ARC default is 10 minutes. This is a very quick way to determine if you're getting disconnected.

Thanks Mike;
As usual, ur response has been timely and good usable info. Currently I use just 2 clusters:
n3ra---65.42.104.225...and...
n9bms---66.84.210.68.
When the ISP was using Sprint as his gateway, I had absolutely zero problems getting throughput (spots, for hours)
from either one of these guys. Then, when ISP changes to COX, even tho I am connected to internet and spots from oh2aq are constant, I am disconnected from either of the above; sometimes after one or two spots sneak thru and sometimes after no spots are rcvd and sometimes I get the spots continuously for hours.
I think that ur idea of leaving the message on the status bar is a good one. I know it will help me in trying to find out what's going on. Tnx fer help

Hi agn Mal;
Maybe we're on to something here. I was, as I read ur email, presently connected to n3ra; got 13 spots from 1836z (when I re-connected) to 1842z (7 min roughly) and then no more spots (disconnected), although from looking at oh2aq, there were a lot more spots from 1842 to present. So...I know the data was interrupted from n3ra to k8wk. My gut feeling is that n3ra is fb as well as n3bms or any other cluster I might wish to connect. My concern is if I raise this issue with my ISP, and have no solid data to PROVE that the data went from the cluster to his line (maybe), he will tell me that he is not at fault...and that will be it. I do not understand what pinging the cluster will prove, particularly since I think the telnet data is being killed somewhere from COX to my ISP. I wud have to ping continuously to show the interruption of data flow from the cluster. Note also that this interruption of data happens about 30 (give or take) times a day...every day (24/7). Occasionally, it will connect, and stay connected for a long time...even overnight. B4 the ISP physically moved his location in our town, and got a new line provider (from Sprint to COX), I was getting 100% data flow from any AR cluster.
Also, when the data is interrupted, and the XMLog packet screen stops showing new spots, I can invoke the F5 node file and be immediately be reconnected and more data will flow for a while. Doesn't seem like this is a 10 min time-out issue. Seems more like---drop a few bits b4 or at the ISP and it gets disconnected---! What do ya think Mal? Oh...I have not changed versions of XMLog. 73/dx

Hello to all - have been following the interesting thread on the "disconnects." That's one of the reasons that I've been using the VE7CC cluster program as a "front-end" with XMLog. It is very easy to invoke "keep alive" as well as "auto-reconnect" with it. It is free and you can find the program at: http://www.ve7cc.net

I gave the details on using it with XMLog in response to a completely different issue - that post dealt with using the Jupiter and N4PY software on a single physical serial port and it was just a note meant to get the programmers thinking on how to solve that problem. A search of the archives should turn it up.

The set-up is easy and I would be glad to answer individual questions on how to get it to work with XMLog or could repost the info if there seems to be several folks interested. Using it as the "front-end" to XMLog was a nice solution to the "disconnect" problem for me. It has a number of very nice features that make it worth considering as an addition to XMLog. YMMV !73 es gud dx -- Don N4HH

Yes Steve the reason I suggested having the node, n3ra, ping you was to give you an idea where the spots were getting lost. The downside of 'pinging' is you will end up with a screen full identification frames. The upside is you will know if and what time you lost your connection to n3ra. If you are only receiving 'pings' then you will also know you didn't lose your connection, for whatever reason there were no spots.
I've watched these suggestions regarding using VE7CC software for a "front-end" as the end all and be all to solve problems. In your case all VE7CC would be is a band-aid and would not help you diagnose where the problem is happening.
If in the future you feel you need a 'front-end' program I would only recommend DX-Telnet. Unfortunately it's not free but on the other hand it is proven not to be 'buggie' and is very stable. It has been a standard in the packet-cluster' world for more than 10 years.
Good Luck

GM Mal...your suggestions have really been helpful to get me thinking. But, having said that, I noticed that last night, I got almost 13 hours of spots from the ISP. I think it is related to the time when nobody is in their shop. Got spots from 6:30p last night local to 7:22 this morning local. Looks suspiciously like quitting time and I know the 7:22 time is their auto reset for timing purposes etc. That kind of reset (auto) drops the whole service IN, mail and telnet and there is a pop-up to tell me the service was disconnected. There is no pop-up when I loose the telnet connection and the IN and mail stays connected and providing data. Now...
Pse tell me how the ping from the node will tell me WHERE the data (spots) are getting lost. Yes...I was thinking along the same lines as to the front-end "fix"... Not really a fix is it? I need to be able to present this issue to my ISP with some real data. I feel now that the staying connected while they were out of their shop is good data, and maybe telling those guys at the ISP will help them determine where the glitch is happening. When u said for the cluster guy to turn on ping just for my callsign...I take it to mean that he would be pinging me...right? Would the pings just show up on my XMLog telnet screen? Do u suggest getting the ISP involved in this at this point? Maybe I can ask him what he was NOT doing while out of the shop and what he WAS doing while in the shop that would periodically disconnect me. He is there from 11a to 2p local.
Incidentally...I am now still getting spots without interruption. He is not in his shop until 11a local today.
By the way Mal...tnx agn for sticking with me on this. I will report to the XMLoggers who responded when I have something concrete to say to them. Unless u can think of a negative side to getting ISP involved, I may stop by at his shop today and see what he thinks abt this. Any thoughts u might have will be appreciated...73/dx

1134. Re: [XMLog] Re: Telnet Disconnects

Yahoo group: XMLog
Date: 2004-08-22 15:12:43 UTC
From: Don Nesbitt
Topic: 1111 Message: 1134

Hi Mal - as far as I can tell, I am the only one who has suggested the VE7CC software as a possible "front-end" for use with XMLog in dealing with "disconnects" and for providing a simple "auto-reconnect" with the ability to pick-up "missed" spots.

--- N7MAL <n7mal@...> wrote:

> I've watched these suggestions regarding using VE7CC
> software for a "front-end" as the end all and be all
> to solve problems.

In my post, I never claimed the VE7CC software was "the end all and be all . . ." - I simply stated that it works for me - as noted in my post: "Using it as the "front-end" to XMLog was a nice solution to the "disconnect" problem for me."

--- N7MAL <n7mal@...> also wrote:

> In your case all VE7CC would be
> is a band-aid and would not help you diagnose where
> the problem is happening.

Agreed - there is no diagnostic benefit to using it or, for that matter, any other cluster program that I know about. By the same token, having a band-aid (there's a nice pun in there somewhere) available when you need it is a pretty good work-around.

--- N7MAL <n7mal@...> also wrote:

> If in the future you feel you need a 'front-end'
> program I would only recommend DX-Telnet.

I've also use DX-Telnet on and off over the years and agree that it's a good program. I just like the look and easy functions of the VE7CC software better.

--- N7MAL <n7mal@...> also wrote:

> Unfortunately it's not free but on the other hand it
> is proven not to be 'buggie' and is very stable.

The VE7CC software has been completely reliable in my installation as an adjunct to XMLog as has DX-Telnet.

In the past, with Mike's "off list" help, I tried to solve my "disconnect" problems and in the end was simply not 100% successful regardless of what cluster I connected to or what software program various clusters were using to serve the spots. My ISP acknowledged that connections are "interrupted" from time to time and in their part of the DSL world that was the end of it as far as they were concerned! There was not going to be a solution that involved them!

The "front-end" - while obviously not solving or isolating the "real" problem - turned out to be what I considered an acceptable "solution" that works for me. Obviously, "Your Mileage May Vary!"

As they say - "I don't have a dog in this hunt" and the usual disclaimers apply: I don't have any pecuniary interest in VE7CC, etc, etc. Just wanted to pass the "front-end" idea along for consideration by others who may be having the same problem.

I hope you and Steve are successful in tracking down and solving this problem.

Have a great day. '73 es gud dx --Don N4HH

GM Don;
I appreciate all ur comments and read them trying to learn more abt what goes on in this very wide world of ham radio...tnx! Mal has been very helpful getting me to think thru all of this and there is new data to help me with the ISP connection problem. This weekend I have had perfect data flow and the clusters have been on all the time except when they do their regular 8 hour resets. I am still in the process of trying to put together some pattern for all this so I will get back to the XMLog list with any progress I make when and if that happens. I will also report failures...keep the card-n-letters coming Don...783/dx

1136. "Time Off" field

Yahoo group: XMLog
Date: 2004-08-24 16:11:30 UTC
From: Mike McAmis
Topic: 1136 Message: 1136

Beta test version 4.80 is now available at www.xmlog.com/beta
This version includes support for an optional "Time Off" field which
is enabled by choosing the "Options/Log Options" menu item and then
setting the "Show Time Off Field" option.

Hi...Mal, Don, Howard, Phillip and Mike...all who were kind enough to reply to my question abt the excessive telnet disconnects I have been experiencing.
Last weekend there were no disconnects as long as the ISP crew was away from the shop. Today I went in after being disconnected a lot of time yesterday and today (Mon. and Tues.) and here is what they told me:
They have applied for a T1 (fo) line from Cox but do not have it installed yet. In the meantime, they are using cable, slow and of limited bandwidth. I was assured that when the T1 line was installed and operational, my problem will disappear. Certain users like me who use data intensive services like spot clusters, are grouped into one line that is shared with the shop service personnel. If they are busy and have a lot of bench-related work, I will get drop-outs and as a result will be disconnected from the cluster. Even on weekday nights, they leave some projects running, and as a result I am often disconnected. On weekends, they tend to turn everything off and that is why I may get better throughput from the cluster then. I will report back when the T1 fo line is in and we will see if the added bw will fix my problem. Tnx for the input from y'all.

> Yes Steve the reason I suggested having the node, n3ra, ping you was to give you an idea where the spots were getting lost. The downside of 'pinging' is you will end up with a screen full identification frames. The upside is you will know if and what time you lost your connection to n3ra. If you are only receiving 'pings' then you will also know you didn't lose your connection, for whatever reason there were no spots.
> I've watched these suggestions regarding using VE7CC software for a "front-end" as the end all and be all to solve problems. In your case all VE7CC would be is a band-aid and would not help you diagnose where the problem is happening.
> If in the future you feel you need a 'front-end' program I would only recommend DX-Telnet. Unfortunately it's not free but on the other hand it is proven not to be 'buggie' and is very stable. It has been a standard in the packet-cluster' world for more than 10 years.

1138. Spotting and the Kenwood TS-2000

Yahoo group: XMLog
Date: 2004-08-28 20:40:27 UTC
From: Kevin Nathan
Topic: 1138 Message: 1138

Hi All,

I am running Xmlog version 4.79 with a Kenwood TS-2000. When I click on a frequency in the packet window the vfo will go there but the mode does not necessarily follow. Particularly, if I am listening on either upper or lower sideband, the rig will send the "C" denoting the cw mode but will not change to it. Any idea why this might be occurring?

Thanks much.

Kevin :)

From: Mike McAmis
Topic: 1138 Message: 1139

Hi Kevin, I recently fixed a similar problem for the Elecraft rig support which uses the same rig control commands as Kenwood. Normally XMLog sends the set mode command first and then sends the set frequency command. It turned out that when the set frequency command was sent the rig was reseting the mode, overriding the mode that had been previously set. I've since changed things so that the order of the commands is reversed for the Elecraft. Since the Elecraft uses the same commands as Kenwood you can quickly see if this is the problem by setting your rig type to Elecraft. Let me know what happens...

Hi Mike,

I tried that experiment and it changes the mode ok but programs in a 650 Hz offset when it changes frequency. This is with the TS-2000 set to maintain the frequency when it changes from ssb to cw. I've got to leave right now but later will try changing this setting and again using the K2 settings to see what happens.

Thanks much and very 73.

Hi Again Mike,

Well, I had a little longer than I thought. I just turned off the feature in the TS-2000 which allows you to maintain the same frequency when you change SSB to CW and set it for the K2. It works just fine now and moves to the frequency and mode shown in the packet window when you click.

Thanks for the fix and very 73.

Hi Kevin, Glad you have things working - If I understand you correctly the Kenwood mode still didn't work even after you changed the TS-2000 features and you still had to set the rig type to Elecraft. If this is the case I'll make a change to XMLog so that it reverses the command order for the TS-2000 (and I'll add a unique rig type for the TS-2000 seperate from the generic Kenwood rig type).

Hi Mike,

Yes it is working with the Elecraft K2 settings. But, I had to turn off the feature in the 2000 that lets you shift from SSB to CW and maintain the same frequency. With this turned on, there was always a 650 Hz offset when using the K2 setting and neither of the Kenwood settings changed both mode and frequency.

Thanks for making the new control set and I look forward to trying it. Please let me know when you are ready for it in beta. Very 73.

Subject: [XMLog] Re: Spotting and the Kenwood TS-2000

Hi Kevin, Glad you have things working - If I understand you correctly the Kenwood mode still didn't work even after you changed the TS-2000 features and you still had to set the rig type to Elecraft. If this is the case I'll make a change to XMLog so that it reverses the command order for the TS-2000 (and I'll add a unique rig type for the TS-2000 seperate from the generic Kenwood rig type).

1144. TS-2000

Yahoo group: XMLog
Date: 2004-09-01 03:00:57 UTC
From: Kevin Nathan
Topic: 1144 Message: 1144

Hi Mike,

I downloaded the new beta version and loaded it. I changed the driver and tested it out. With the menu setting at off (changing from SSB to CW will require retuning) the rig moves frequency and mode accurately when clicking on a packet window frequency. With that menu setting turned on (changing from SSB to CW does not require retuning) there is again a 650 Hz offset when clicking on a packet window frequency. This is working exactly like the K2 driver.

Thanks much Mike for your quick and great work. Very 73.

Kevin :)

1145. ADIF import modification?

Yahoo group: XMLog
Date: 2004-09-02 02:21:29 UTC
From: David Spoelstra
Topic: 1145 Message: 1145

Thanks again for such a wonderful program. I have convinced my
entire club to standardize on XMLog. Because of that, I've been
doing a lot of ADIF imports of club logs.

I always setup the import to query qrz.com and fill in the name and
address. I find that any callsign with a "/" like "N4JS/M"
or "N2NWK/M" never get the name and address filled in during the
import.

After the import, I then need to search for blank names and
hit "CTRL-L" and XMLog immediately finds the callsigns and fills in
the names and addresses. I also noticed that when I do "CTRL-L"
XMLog drops the "/M" and just looks up the root callsigns.

I'm wondering if we can make the ADIF import work the same way as
doing a "CTRL-L". It would save me a bunch of time. I've got about
8,000 QSOs so far that I'm going to have to manually use "CTRL-L" to
lookup the info...

Thanks tons!

1147. Alinco DX70T

Yahoo group: XMLog
Date: 2004-09-03 14:58:08 UTC
From: stuartliss
Topic: 1147 Message: 1147

Hi,

I just bought an Alinco DX70T. If I had the right cables, would I
be able to use XMLog to read frequency from the radio?

Thanks,

Stuart, WA2PQE

1148. Re: Alinco DX70T

Yahoo group: XMLog
Date: 2004-09-03 15:20:44 UTC
From: Mike McAmis
Topic: 1147 Message: 1148

Hi Stuart, XMLog currently supports the DX-77, perhaps the DX-70 uses the same rig control commands. You can try setting the rig type to DX-77 and try it out. If not, perhaps your manual has documentation detailing the format for the commands and I can add support for the DX-70.

1149. Problem with Version 4,82

Yahoo group: XMLog
Date: 2004-09-12 05:31:30 UTC
From: Kevin Nathan
Topic: 1149 Message: 1149

Hi Mike,

I seem to have a problem with version 4.82. This weekend I was lucky and worked some new DX stations. However, when I try to bring up my DX totals and hit OK when choosing all log entries, the program reboots my computer. Any idea what may be causing this?

I am using Windows XP home Edition. Thanks much and very 73.

1152. Searching the log

Yahoo group: XMLog
Date: 2004-09-12 18:17:57 UTC
From: aa6rh
Topic: 1152 Message: 1152

Hi folks:

After trying out a few different logging programs, I've settled on XMlog.

I am having a small problem though. When I try to search my log with a partial callsign such as just a prefix, it does not return any entries. However if I search on other fields such as mode or RST or what have you, it works just fine. The help files says that I should be able to search on partial calls or prefixes.

Everything else works just fine and XMlog has just the right amount of features to satisfy my needs!

Anyway, using Win 2000 Pro sp4 with XMlog version 4.79

Thanks everyone for you time.....

From: Mike McAmis
Topic: 1152 Message: 1154

Hi Rob, Normally XMLog looks for exact matches for data entered for searches. However it also supports 'regular expressions' for search keys, for example a search key of =*abc* for the call will match fields with abc anywhere in the field. For more variations check the 'Searching the Log' section in the help file.

Hi Bob,

You need to use "=". Lets say you are looking for
a all K2 calls you would search for "=K2*".
You must use the = sign and the * to work properly.

Good Luck. It is a great program.

Hi again folks:

Thanks for all the replies, It looks like the problem was "operator error" hi hi.

There it was in black and white all of the time, guess I need to stop being a typical Ham and RTFM.

Now if I can just save enough money, get the new Ic-7800 or the FTdx-9000 and get them to work without RingTFM hi hi

Thanks again everyone and take care!

Rob

1163. Ver 4.82

Yahoo group: XMLog
Date: 2004-09-16 02:22:12 UTC
From: Stuart Liss
Topic: 1163 Message: 1163

Hi,

Version 4.82 resolved the error I reported in my last email. The DX70T does not have computer control like the DX77, so I can't use those features.

When I entered old QSOs from my paper logs, I was entering the date, time and frequency over and over again. Is it possible to have it default to the last value entered? I have the mode and power in the .ini file, so I don't have to change them often.

Thanks,

Stuart, WA2PQE

Mike -

As one of the world's worst (and slowest) typists, I would like to agree with Stuart's plea for a little help in doing manual log entry. I have many years of paper logs that I would love to transfer to XMLOG but the process is just too tedious for a klutz like me.

Would it be possible to have a shortcut key to allow duplication (while in ADD mode)of the data from the corresponding field of the previously added log entry? Microsoft Access provides this sort of shortcut key for duplication.

Thanks & 73 - Don "Stone Fingers" Jones N4TN

Yahoo group: XMLog
Date: 2004-09-16 13:58:38 UTC
From: Mike McAmis
Topic: 1160 Message: 1165

Hi Kevin, I don't think I can offer much help here. XMLog isn't a very 'invasive' program. I doesn't use the registry so this isn't a problem. It also mostly uses standard Microsoft runtime DLL's etc. The only non-Microsoft compoments are used for sending CW and for rig control as well as the DLL's provided provided by the various callbook vendors to read their callbook databases.

It's possible that one of these components has been corrupted, you can try re-installing XMLog, or, you can back up your log file (and the associated files mentioned at www.xmlog.com/beta) and do an un-install/re-install.

Does the problem only occur for this report or for other reports as well?

Again, it takes some pretty drastic action on the part of a application to crash Windows and XMLog is a pretty straight-forward program.

Hi Don and Stuart, One thing you might try is using the "Edit/Edit default values for entries" and the associated "Edit/Use default values for entries" menu items. This won't have the power of a "copy from last entry" key but you can set up your Power and Mode defaults and if you are doing a several entries per day you can set a Date default as well.

XMLog is a logging program for use by radio amateurs ("hams")
in logging their contacts.

It has absolutely no relation to the eXtreme Markup Language
(XML) Windows application.

You can get it at www.xmlog.com-- although I think you will
conclude from the above that you don't want it.

From: Kevin Nathan
Topic: 1160 Message: 1170

Hi Mike,

I got your message this morning but didn't get a chance to test things until tonight. So far I tried backing up those files you speak to on the web site and then uninstalled and reinstalled version 4.82. Same problem with the computer rebooting on hitting ok to show the dx totals on screen. It also does it on any other reports as well.

Next I uninstalled xmlog again and got version 4.79 and installed it since I knew that worked ok. However, it now does the same thing.

I then uninstalled 4.79 and reinstalled 4,82 and tried sending the dxcc totals to a file rather than the screen. It worked fine that time. I don't know if this tells you anything important but that is what I was able to find.

Thanks much for your help and very 73.

1171. Importing from DOS Logging Program

Yahoo group: XMLog
Date: 2004-09-18 18:07:28 UTC
From: Rayford Cunningham
Topic: 1171 Message: 1171

I have used WJ2O Logging Program (DOS) for several years and I have over 80,000 entries. This Program is now history. How can I move these files to this program?
My interest is plain logging and no rig interface. If I have worked the station I would like to see all previous contacts displayed. If it is a new contact I would like to have the program look up the call from the on line or CD Version of QRZ, and fill in my logbook. No interest in Contest Logs or DX logs. Is this asking too much?

Hi Ray, I believe the WJ2O logger has a feature that lets you create an ADIF file from your log which can be used to move your files to XMLog using the "Import/Import ADIF File" menu item.

XMLog has both of those covered.

From: mefazamy
Topic: 1174 Message: 1174

Forgive me. I'm a relative newcomer to xmLog, and this topic probably has been discussed previously.

I've been considering getting into PSK31 using digipan.
1. Is xmLog compatible to PSK via digipan? If so,
2. Do I have to buy an additional interface? (I'm presently using an interface that's compatible with Kenwood TS-140.)

I'll be grateful for any info regarding this.

Tnx,
Evan

From: Mike McAmis
Topic: 1174 Message: 1175

Hi Evan, XMLog doesn't support any interfaces to RTTY, PSK31, etc. systems. Some people use programs like WriteLog or MixW2 and then export the QSOs as ADIF files and import them into XMLog.

Mike - W1ECT

1176. Alaska

Yahoo group: XMLog
Date: 2004-10-10 05:53:58 UTC
From: stuartliss
Topic: 1176 Message: 1176

Hi,

I've been entering QSOs with hams with Alaska callsigns who live in the lower 48 states. XMLog insists that all KL7 hams are in Alaska. I have to change the call to KL7xxx/W7 to get it to stop. If the ham has changed his address with the FCC, he doesn't use a portable call. Is there an option to shut this off?

Thanks,

Stuart, WA2PQE

1177. Re: Alaska

From: pa1cc
Topic: 1176 Message: 1177

Hi Stuart,

You cannot change the state because you probably haven't changed the country field. You can enter kl7xxx but you have to change the country to "W". After that it will accept states other than AK.

Hi Mal, There's no real 'work around' to allow CW keying via an LPT port on XP. What most folk do (including myself) is to add another serial port to your system. One easy way is to get a single (or dual, doesn't cost much more) serial port card (ISA if you have an old PC, PCI if you have a newer one). These are easy to install and cost $25~$35 from places like CDW. You can also get a USB to serial convertor. These are fairly cheap as well - I see in this month's QST that even MFJ is selling one for $25. However for me, I'd rather add the serial port card and not use up a USB port.

Thanks Mike for the reply. I have the free serial port but was trying to avoid using it. As you know I'm an active contester and I'm forced now to use CTWIN, which does not allow serial keying. I bought a new parallel keying adapter which works great with CT. So if there's no work-around I'll connect my old serial keying adapter. My rig has 2 key inputs so it will accept keying from both sources
Thanks again

Topic: 1178 Message: 1181

Hi Mike,

One question about serial ports in XP. Do the rules that governed their use in the older systems still apply? For example, I remember that if you had two com ports in the old days, that was all you could use because of IRQ conflicts. I am already using the one natural serial port on my computer and have a USB to serial port converter also. These run the radio control and my TNC. Do you think I could run another USB to serial converter for keying and have it work?

Thanks very much and very 73.

Hi Mal - you might want to take a look at how the parallel port is used under XP in the N1MM Logger program as well as WriteLog. It requires the installation of a small software program and works just fine for LPT keying. There might be a reason that it won't work with XMLog but I don't know - at least you can check it out to see if it fills the bill. You can find details at:
http://www.qsl.net/n1eu/n1mm/MMKeying.htm

Topic: 1178 Message: 1184

XMLog won't allow the use of dlportio, etc. since it explicitly checks to see what system you are running and won't allow LPT keying on Windows NT/2K/XP. I had looked into supporting dlportio at one point but since XMLog is freeware I didn't want to deal with the extra work it would take to install and support this feature.

XMLog currently handles COM1-COM8 for serial port keying. This applies to all Windows versions.

I hadn't realized that CTWin didn't support serial port keying... strange. Maybe you should give WriteLog or N1MM (which is freeware) a try.

Hi Mike,

One of my biggest problems with logging software is that most of them are not very accessible with a screen reader for us blind folks. I've tried writelog and others but often the labels aren't spoken for the fields and so on so you have no really way to determine where you are unless you have a super memory. That is the reason I like and recommend Xmlog. I'll have to look at which serial port is being used right now by the USB to serial converter I have and see if I can add another and direct it to com8.

Thanks much and very 73.being used now by

From: Jim Henry
Topic: 1188 Message: 1188

Hello All

I am new to this group and this is my first posting here. I have two questions before I proceed to download XMLog to my computer. First, is this program intended for use with the HF bands or can it be used for logging VHF/UHF contacts as well?
Second question, is it compatible with Office 2000. I have been told there are problems but would like this clarified please.

Thanks in advance

Hi Jim, XMLog is primarily designed for the HF operator but it allows you to log VHF/UHF and above QSOs. The only award tracking specifically for VHF is six meter DXCC.

Not sure what you mean by "Office compatibility". XMLog does use Excel to provide one of it's reports and also uses Microsoft Access databases for it's log files. Other than that there is no connection with Office.

Subject: [XMLog] Re: Compatibility

Hi Jim, XMLog is primarily designed for the HF operator but it allows you to log VHF/UHF and above QSOs. The only award tracking specifically for VHF is six meter DXCC.

Not sure what you mean by "Office compatibility". XMLog does use Excel to provide one of it's reports and also uses Microsoft Access databases for it's log files. Other than that there is no connection with Office.

From: Rayford
Topic: 1191 Message: 1191

Hi Gang,

I just started using XMLog and I think it will do everything that I want it to do. My only problem is being able to readily read the data on my 13 inch (radio computer) screen.

Can the images be made larger? I have not yet tried changing the font size...perhaps that might help. I have also varied the color schemes.

Hi Rayford, There is no way to re-size the main log window. Diddling the font is your only option but you can only increase the font size until the text is to tall for the fields.

No, they are just random. Mostly DX calls. I can□t find anything that is consistent. The only thing I can think of is QRZ could be busy and there could be a delay in connection. BTW I am on a cable to the internet.

1196. New search feature in 4.84 working great

Yahoo group: XMLog
Date: 2004-10-30 17:55:46 UTC
From: Al Ludwick
Topic: 1196 Message: 1196

Mike,
The new search feature in 4.84 is working great. Thanks for listening and adding this feature. From the release notes:

- There is a new form for search keys when you want to search for log records containing a certain string anywhere in the field. The old technique was to use a wildcard of the form =*xyz* to find all log records that contained xyz in the field. You can now also use a search key of the form ~xyz to save some typing.

I've programmed a function key to make it even more efficient. I set up F3 using a (free) utiliy program to send an "Alt S and the tilde." When I hit F3, the cursor jumps to the call field, types the tilde and I just enter the partial call and hit enter.

Thanks again for a great logger...Al

1199. problems identifying country for portable stations

Yahoo group: XMLog
Date: 2004-10-31 17:25:31 UTC
From: zamba0321
Topic: 1199 Message: 1199

Hi Mike

while working some stations this weekend in the contest, I noticed
that xmlog (i'm using version 4.84) doesn't log the country
correctly for stations that are portable in another country.
I'm using the QRZ.COM as the callbook, but I don't have the option
'use callbook for locations' selected

example HB0/HB9AON is logged as Switserland
and not as lichtenstein

9M2/G4ZFE is logged as england and not as malaysia

These calls are entered like above on the cluster and I just do
'start log entry' by right clicking on them.

When I 'mouse over' these calls on the spot map then the country is
identified correctly, only when I add it to the log, and type CTRL-F
to get the address info from QRZ.com then the country gets set
incorrectly.

Note: Even in the contest with many spots coming in, the program
held up great and the spots map in full screen mode gives a great
overview of what's out there !

cheers de K6TE Wim.

Wim and Mike -

I am still using 4.75 and I tried HB0/HB9AON right off the cluster
("Start log entry") and it logged correctly as Liechtenstein.

If there is a problem, perhaps it came about as a result of some changes
between 4.75 and 4.84

I am using 4.79 and it logged HB0/HB9AON as Liechtenstein also. Hope this helps. For a long time if the country is in the cluster first that is what is logged. If the call is in the cluster after the call then it is logged as the call's country.

I am using 4.82 and had similar success logging the call correctly with the right country showing. I didn't do it from the menus but instead by hand but no problem.

When you start the program, there is a small box in the middle of the screen. You have to look very quickly. Maybe you have to start it several times to catch the version.

1206. Re: [XMLog] problems identifying country for portable stations

Yahoo group: XMLog
Date: 2004-11-01 01:08:24 UTC
From: N7MAL
Topic: 1199 Message: 1206

When you want to know what version you are using click on help and then click about xmlog.
In other words exactly the same way you check the version of every windows program....

Wim and Mike -

I am still using 4.75 and I tried HB0/HB9AON right off the cluster
("Start log entry") and it logged correctly as Liechtenstein.

If there is a problem, perhaps it came about as a result of some changes
between 4.75 and 4.84

From: D.W. Jones
Topic: 1199 Message: 1209

Yes, it does work that way. Being feeble minded, I was stupid enough to look in text of the "About" display expecting to find it there. Instead, it appears as the title of the screen. Nothing wrong with that - I am just too old and set in my ways to think to look there.

stations

Wim and Mike -

I am still using 4.75 and I tried HB0/HB9AON right off the cluster
("Start log entry") and it logged correctly as Liechtenstein.

If there is a problem, perhaps it came about as a result of some
changes
between 4.75 and 4.84

1211. RE: [XMLog] problems identifying country for portable stations

Yahoo group: XMLog
Date: 2004-11-01 12:16:52 UTC
From: Howard G. Baker
Topic: 1199 Message: 1211

Disregard previous reply. After looking for the tenth time I found it under
the Help/About place. I guess I am old and stupid too.

When you want to know what version you are using click on help and then
click about xmlog. In other words exactly the same way you check the
version
of every windows program....

1212. Re: problems identifying country for portable stations

Yahoo group: XMLog
Date: 2004-11-01 16:40:39 UTC
From: zamba0321
Topic: 1199 Message: 1212

All,

it works for me as long as I don't have QRZ.COM as the callbook
selected. Also I have the option 'use callbook for locations'
unchecked.
Even when I manually type in the call HB0/HB9AON it shows up as
liechtenstein in the titlebar which is correct, but when I type
CTRL-F to get the address from the callbook then it changes
the country back to switserland.

hope that clarifies what exactly is going wrong

73 de K6TE Wim.

1213. RE: [XMLog] problems identifying country for portable stations

Yahoo group: XMLog
Date: 2004-11-01 17:38:49 UTC
From: Jim Henry
Topic: 1199 Message: 1213

I found it thanks...I am on version 4.79 but cannot find anything on the website marked 4.83. Obviously I must be doing something wrong. Can anyone point me in the right direction...I have only installed the main file since I do not need the sound or cw features.

1217. Re: problems identifying country for portable stations

Yahoo group: XMLog
Date: 2004-11-01 18:14:36 UTC
From: Mike McAmis
Topic: 1199 Message: 1217

Hi, It seems that the Control+F isn't working properly - no fields
that are already set are supposed to be replaced (this includes zone,
state, county, etc.). For now you can just clear the prefix field
after doing the Control+F and the prefix/country will be reset to the
correct value.

I'll take a look a post a fix this week.

1219. 4.84 and TT Jupiter

Yahoo group: XMLog
Date: 2004-11-06 01:07:32 UTC
From: D.W. Jones
Topic: 1219 Message: 1219

Is anyone out there using a TenTec Jupiter and running MLOG 4.84? I upgraded from 4.75 a few days ago and since that time attempting to add to the log results in a "Rig Command Error" message - IF - I have selected "Get Frequency from rig" and/or "Get Mode from rig". If I uncheck both these options I can start a log entry (without the frequency and mode).

I can click on a frequency in the packet window and it correctly sets the rig mode and frequency. But if I either (a) right click on a call in the packet window and select "Start log entry for (callsign)", or (b) go to the log window and do a Ctrl-A, I get the "Rig Command Error".

To add to the confusion, I have done some equipment moving in the shack in the same time frame. I have carefully checked the cabling and found nothing suspicious.

Unless some one has a suggestion or comment, I will go back to 4.75 (after Sweepstakes) and see if I have the same problem (whew - I'm glad that I followed the backup recommendations before I upgraded).

1220. New User Report

Yahoo group: XMLog
Date: 2004-11-08 20:57:24 UTC
From: Jim Henry
Topic: 1220 Message: 1220

Hello All
I am a new user of XM log having downloaded it about two weeks ago. I am very impressed with the program which does most of the things which I want from a logging program. I am making good use of the cluster facility linking to it via the internet and I have just today customised a "label" so that I can print QSL info directly on to my QSL card rather than having to print on labels and the affix the labels to my cards. It took some time to work out how to get the label customised the way I wanted but it is working fine and the Bureau Card facility is excellent.

I was wondering if any thought has been given to providing the option of being able to look up QRZ.com automatically and of having name and QTH info automatically transferred to the logging screen? Another program which I have used had this facility and, in my view, made logging QSO's so much easier.

My thanks to the author for a very interesting and useful program.

Cancel my message about this subject. I reverted to 4.75 and still had
the problem. I then thought of trying my
Jupiter with N4PY rather than MLOG (I can't use both, only one COM port)
- it failed also. The cable ends look
good so I guess a trip to the TenTec factory will be coming up.

Hi Jim

the QRZ.COM callbook feature is alreday build-in.
Go to the 'options' menu, then 'Callbook setup' then select QRZ.COM

When you add a log entry, you can type CTRL-F to get the info
from qrz.com filled in

Another menu option is in 'edit' menu then 'edit defaults for new
entry' and select 'get info from callbook'
also select 'use defaults for new entries'

good luck

1226. QSL printing

Yahoo group: XMLog
Date: 2004-11-17 00:40:26 UTC
From: docatmadpeds
Topic: 1226 Message: 1226

Hi,
I have been trying to get automated printing of QSL cards set up but am having a problem I can't seem to resolve. I would like to use the QSL labels to print the card I've set up on the front of postcard paper (4 to a page.) That works fine. But, then, I'd like to flip the page over and print the address and return address on the opposite side using the Mailing labels function. This also works fine except I am unable to figure a way to flip the columns so that the correct address prints on the back of the appropriate QSL card. Am I missing something or does anybody have any ideas?
Thanks,
Doc, W8BQ

Jim,
If I understand you correctly, have you tried double-clicking on the frist line of the "Address" area? If you are connected to the internet, you should get QRZ.com info imported directly into your logging screen, assuming you have correctly set the Callbook Setup under the Options tab.
Hope this is what you were looking for.

I would like to do that too, but I don't think there's any
provision for it. If you find a way to do it, please let me
know.

In the meanwhile, I print the addresses on sticky labels and
stick 'em on the cards.

1231. packet-cluster

Yahoo group: XMLog
Date: 2004-11-17 20:03:06 UTC
From: N7MAL
Topic: 1231 Message: 1231

Has anyone successfully used DX-telnet to pass WWV and Talk messages to the MLog packet window. Getting the DX to go through was easy. VE7CC does it but there are other issues(which I won't go into) with VE7CC.

This reason for the question is because all the clusters require some sort-of 'keep alive' packets to maintain a long term connection. In the overnight hours, especially, you end up with a screen full of id packets. There are also issues with ISP's and inactivity so these 'keep-alive' packets are almost mandatory but sure fill up a screen fast.
Thanks

OK, I think I understand the problem now... Here's one idea that would work but might be too much trouble to be appealing. You could use your stock as though it were two seperate vertical columns of two cards. Print the QSL info on the two front left side cards and then the mailing info on the flip side for those two cards on the right side of the stock and vice versa. This would mean having two page setups defining two cards per page.

I'm not sure what a good strategy would be to provide some feature for custom labels that would handle this. Rather than automatically calculating the position for each label based on the "Page Layout" info I guess you would need the option of explicitly providing the postioning info for each label on the page.

Mike,

Thanks for the reply, and you're right, that option is too
complicated to be practical. I'll just print addresses on sticky
labels and hope you can include a way to do this kind of printing
with the release of your next version.
Please let me know if any other option comes to mind.

Sara,

Don't know about converting directly to Html but XMLog allows you to export log information to a text file which can be read by any simple text program like Notepad which comes with Windows. You could easily add html tags to the text file to allow the log information to be viewed on a web page. Plus, XMLog is free to download right away. (The programmer, Mike, just asks for a donation if you like the program and plan to keep using it.)

For XMLog, go to www.xmlog.com.

Good luck on your DXpedition...hope to work you.

The most common program for DX'peditions is CT. It has recently become freeware and be downloaded at www.k1ea.com
XMLog while it is a really good general logging program is far to cumbersome for xpedition or contest type operations.
As to your HTML requirements CT creates 2 log files that are plain text files which could be used in an HTML environment.

1237. still bug for entering portable stations

Yahoo group: XMLog
Date: 2004-11-25 02:01:11 UTC
From: zamba0321
Topic: 1237 Message: 1237

Hi Mike

I'm using xmlog 4.85 which has a fix for portable stations
getting their info from the callbook.
But I just added VP9/K1XM and though it shows Bermuda while
I'm entering the rest of the QSO info, as soon as I klick on 'Add'
or when I type CTRL-F to get info from callbook (qrz.com)
then it changes the country logged as U.S.

cheers and keep up the great job on this program,
it's a lotta fun and easy to use

de K6TE Wim.

1238. Alarm

Yahoo group: XMLog
Date: 2004-11-27 18:22:58 UTC
From: Kevin Nathan
Topic: 1238 Message: 1238

Hi Mike,

What would be the feasibility of adding an audio alarm to XMLog which would sound if a country one needs is spotted? I am totally blind and this would be a nice feature for me or anyone who wants to log into a cluster but not necessarily sit in front of the computer screen waiting for that rare one. I can't remember right now without reading all the docs but I think XMLog has the ability to highlight needed countries on the screen so could this be extended to sound an audible alarm?

Thanks much for the discussion and very 73.

Kevin :)

Hi Kevin;
I think (if I understand what u want correctly) XMLog already has this feature and I use it. When u enable the packet window from the options menu, and if u have the audible alarm turned on from options, packet options, packet cluster alerts all turned on...a cw signal will result for each needed band-country (if this is selected). New entities will be headed by a cw "sn" and all-time -new ones will get a double "sn"...sn, sn. Hope this helps...73/dx

Hi Steve,

I'll give that a shot. I was hoping for something louder but that would be
a good start.

Thanks much and very 73.

Kevin :)

Hi agn Kevin;
Here, the cw alerts are on the PC speaker...as such at least on my PC the soundcard control allows some volume control of that sound so I cam make it pretty loud. If that fails, maybe u can wire the speaker terminals to a small audio amp, then u can blast even the neighbors out and they will be clamoring to work the dx...hi...gl...73/dx

From: Nelson Wittstock
Topic: 1238 Message: 1242

Hi Mike,

With the packet window open, go to DX and click on it. Then click on Packet Cluster Alerts. One of the options is to have voice alerts. This is the one that I have activated as it speaks the mode, the frequency band and gives the call of the packet spotted station. I downloaded the voice file from the XMLog web page.

Good luck es 73

Hi Steve,

I guess I'm confused. I use voice alerts on my system and don't have anything inhibited in that window but still don't get anything but the sound set in the sounds box as a warning. There also doesn't seem to be anyway to add your own sound, just the ones in the choices boxes. Can you direct me to exactly what I need to do differently?

Thanks much and very 73.

Kevin :)

From: Steve Litwins
Topic: 1238 Message: 1244

Well Kevin...things are not so simple as I thought are they? I have never messed with voice alerts, as a consequence I know nothing abt how to set them up...sri. The cw alerts work fb for me and can be set at any speed and any volume...would this not work ok for u? I know there are some canned voice alerts available but have not played with them as the cw alerts work for me fb. I also know (or think I know) that u can make ur own voice alerts, but the process seems way to complicated for me, so have not played with voice. Have u tried the cw alerts? They give a sn (wake up call)---prefix (according to XMLog list)---band (in meters) and mode (cw, phone, rtty). As we are writing this there are alerts coming in from the cw contest abt one for every 5 seconds. These come from opening up the packet spots window...the window that lists each spot, and ur own personal status according to XMLog abt if u need it or need to qsl etc...have u heard this? I think u do this from the "options---packet options and port select---then just enable the cw spots under the "packet cluster alerts" tab. Maybe I do not understand the problem. Maybe it's time to ask Mike McAmes, the owner of XMLog.
I will be glad to help with what I know about Kevin, but I do not think I understand the problem...let me know if I can be of assistance...73/dx

Well...now that I read the last email from u Kevin several more time it
seems to me that here is the problem:
U are getting a "ding" or something like that when a spot u need shows but
not the prefix-band-mode info u really need...right? Have u created a
folder under the parent MLog directory called "voice"? This is where u wud
have to store ur wave voice files for each letter and number and other marks
like slash etc. That is where and what XMLog calls when it produces a
spot...otherwise, all u get is a "ding".
Am I understanding the problem any better? 73/dx

1246. RE: [XMLog] Alarm

Yahoo group: XMLog
Date: 2004-11-28 01:17:59 UTC
From: Kevin Nathan
Topic: 1238 Message: 1246

Hi Steve,

Oh no, I get band info and mode info with the voice alerts. I am under the impression that when a spot comes across that you need, as opposed to one you already have, it is somehow highlighted on the screen. What I would like is an audio method of being told that is a needed country rather than just the visual. That way, I might be watching TV out in the family room adjacent to the ham shack and could hear some sort of alarm when a new country I need is spotted as opposed to just the constant flow of voice or CW alerts. Even if I could add a siren or some sort of loud obnoxious noise to the alerts area that would help because I can use the needs filter on my local cluster so that I only see the countries I need but I see no way to do that.

Did I confuse the issue worse? <GRIN> Thanks and very 73.

Kevin :)

Subject: Re: [XMLog] Alarm

Well...now that I read the last email from u Kevin several more time it seems to me that here is the problem:
U are getting a "ding" or something like that when a spot u need shows but not the prefix-band-mode info u really need...right? Have u created a folder under the parent MLog directory called "voice"? This is where u wud have to store ur wave voice files for each letter and number and other marks like slash etc. That is where and what XMLog calls when it produces a spot...otherwise, all u get is a "ding".
Am I understanding the problem any better? 73/dx steve, k8wk

From: Steve Litwins
Topic: 1238 Message: 1247

I think we are making some progress here Kevin. I think what I hear and what u hear must be different somehow. I only get alerts for stns that are spotted that I need (do not have confirmed). Many many spots come in that I have no need for and thus hear no cw telling me anything abt them...silence. From what u say u get them all??? What I really mean is that only the visually highlighted ones with the extra blank space on either end of the call are the ones I hear in the cw spot...the ones I need to confirm. These are the spots I do not have confirmed. If I don't need it (do have it confirmed) , I hear nothing. All spots are highlighted on the screen, but, only the ones I need are highlighted with the extra blank space on both ends of the call...a kind of visual alert. Now; u say u get band and mode info with the voice alerts...and I assume u only get voice alerts for the ones u need (right??)...so...what more (or less) do u need? Unless u get all spots with an alert...is that so?? ...73/dx

1248. RE: [XMLog] Alarm

Yahoo group: XMLog
Date: 2004-11-28 06:17:16 UTC
From: Kevin Nathan
Topic: 1238 Message: 1248

Hi Steve,

What I did is sent a list to my local cluster for a Dxneeds filter which, when turned on, will only show me spots for those countries which I haven't worked yet. Otherwise, the spots are being announced so fast it is hard to keep track of them. It really has nothing to do with XMLog except that I have turned on voice alerts so I hear band, mode and call for each spot. Any limiting of spots is done by the cluster.

What I would like XMLog to do for me is when a spot comes across that I haven't worked yet I want to have a loud noise activated like a siren or alarm sound of some kind to let me know, even if I'm not in the same room, that I should investigate because something I need has just been spotted.

I hope that makes sense. Thanks and very 73.

Kevin :)

From: Steve Litwins
Topic: 1238 Message: 1249

Kevin;
Think I understand...better...not fully tho. Why don't u just let XMLog announce the needed spots? Then u will know if u hear something, u need it. If u don't need a particular spot, u will not hear anything. That way u can either turn up the PC audio on the spots, or if u are watching TV or are outside, u can rig up an amplified output on the PC speaker via an external amp and spkr which u can set to as loud as u need. Here I never miss any spots I need unless I am asleep and do not wish to be disturbed. Or...am I still missing the problem? 73/dx

1250. RE: [XMLog] Alarm

Yahoo group: XMLog
Date: 2004-11-28 15:33:57 UTC
From: Kevin Nathan
Topic: 1238 Message: 1250

Hi Steve,

You're pretty right. I could certainly turn it up. I was hoping for just a simple way to have a real catchy sound which would act as a cue but I don't think there's an easy way to do that unless Mike were to add a way to choose any file you wish as an alert. I appreciate all the sounding of ideas though and the help. Very 73 and it has been a pleasure.

Kevin :)

Kevin;
Think I understand...better...not fully tho. Why don't u just let XMLog announce the needed spots? Then u will know if u hear something, u need it. If u don't need a particular spot, u will not hear anything. That way u can either turn up the PC audio on the spots, or if u are watching TV or are outside, u can rig up an amplified output on the PC speaker via an external amp and spkr which u can set to as loud as u need. Here I never miss any spots I need unless I am asleep and do not wish to be disturbed. Or...am I still missing the problem? 73/dx steve, k8wk

1251. Re: [XMLog] Alarm

Yahoo group: XMLog
Date: 2004-11-28 16:37:03 UTC
From: Steve Litwins
Topic: 1238 Message: 1251

GM Kevin;
Actually I think there is a way to get exactly what u want. However, since I have not tried it, u will have to ask Mike. I think u can custom design any alert sound that u want...bell, whistle, even a guy who yells ALERT ALERT in place of the cw "sn"... I think that somewhere in Win XX, there are some canned *.wave files for different sounds. I have never fiddled with all that so I wud have to start from scratch and see how all that is put together. I wud start with Mike's help files on the voice alerts which I think have good starting info in them...then u have to experiment.
I hope all this discussion has hatched some ideas for u Kevin. Sri I have not been able to help more, but I am sure some direct questions to Mike will give u a good place to start...gl...73/dx

Hi Kevin, I was busy this weekend with the CQ WW contest so I just saw your message. Have you invoked the "DX/Update Packet DXCC Status" menu item. This menu item builds the "needed" list for the packet alarms. Without using this menu item everything will appear to be needed and get an alarm. You should also use this menu item whenever you've made log changes that affect the needed status of some country. I've considered automating this action but it turns out that it would be too expensive (i.e. slow) and would not be appropriate for people who are maintaining multiple log files.

Topic: 1238 Message: 1253

Hi Mike,

I have done that so my dxcc status is up-to-date. What should occur now in terms of alarms? I always get some type of sound when a spot comes across--set in the sounds area under options. If I turn beep off under packet settings, then I don't seem to hear anything except the voice alert. What can I set differently for needed countries?

Thanks much and very 73.

Kevin :)

Thanks for the QSO in the contest Mike!! It certainly kept me busy with 840 QSOs in the QRP section.

A question on XMLog as a result.

I use SD from EI5DI for logging. The ADIF output from the DOS version of SD I have incorrectly includes the line <Contest_ID:9>CQ-WW-SSB even though I have set it up correctly for the CW event. This is probably corrected in the current Windows version of SD, but I cannot run that on my 386 logging laptop. As a result all the QSOs I have imported into XMLOG show 'CQ-WW-SSB' in the comments field. I now notice it has done the same thing for all my 2004 WPX CW QSOs..

Is there any way of globally changing these (other than deleting all the QSOs, correcting the SD ADIF) and reloading? I can find no 'search and replace' option anywhere. I am not going to do it manually...

Of course I have already uploaded these logs to eQSL and LOTW (but not sure if they do anything with those fields) so it is probably now an academic exercise. ps if Mike (or others) uses eQSL/LOTW he should have QSLs for his contact, wonder if that has any mention of SSB??

You can open the ADIF file in Notepad and use its find/replace feature
(Edit, Replace, or press CTRL-H). Or just about any other file editor
should let you use a find and replace to change CQ-WW-SSB to CQ-WW-CW.

That was not my question. I know I can edit the original ADIF file, childs play. But I have already imported that file to XMLOG and need to change the contents of the 'Notes' box there for each QSO without deleting all those QSOs and re-importing. Is there a way within XMLOG to do a global replace on (say) all selected QSOs? Editing the MS Access log file directly is a little more involved and certainly can't be done with Notepad.

There is no way to do a global edit or replace of the Notes field.
Your best bet would be to delete the records, hack the ADIF file, and
re-import it. If the records are just for a contest weekend you can
select all the records by specifying a date range (e.g.
>=11/27/04,<=11/2/04) and then do a "Edit/Delete Selected Records".
This assumes you don't have other records you'd like to keep that lie
within this date range.

Hi Sara

Check

http://www.qsl.net/hb9mtn/hb9mtn-log-search.html or
http://www.qsl.net/hb9mtn/5b4agv-log-search.html

and follow the link to G4ZFE, the author of Log Search.

All you need to do is Export your log file from XMLog to ADIF and use the sortlog.exe from G4ZFE, upload to your internet site and there you are!

Hope that helps!

Topic: 1238 Message: 1259

Hi Kevin, Here's another thing to consider: XMLog will give an alert if 1) The country is unconfirmed on this band or mode 2) The country is worked but not confirmed 3) The country has a QSL outstanding but is not confirmed. If you don't want to get alerts for these situations you can use the "DX/PacketCluster Alerts" menu item from the Packet Window and set the appropriate "Inihibit alerts for:" options.

Topic: 1261 Message: 1262

Hi Kevin, All Kenwood radios share the same basic rig control commands so you should have no problem. The only reason there are seperate entries for a few Kenwood rigs is because they have different default baud rates (other than 4800).

1265. Wrong frequency format ?

Yahoo group: XMLog
Date: 2004-12-14 16:30:14 UTC
From: Geir
Topic: 1265 Message: 1265

I have an IC706MK2 hooked up to the computer and use
the XMLOG program. After installing the 4.84 version
I can't save a new record(QSO) untill I have changed
the delimiter in the frequency digits.

It comes up - after a CTRL-A - as 7.045, but
I have to change it to 7,045 in order to be able to do a save.

Anyone that has a remedy ?
Something to do with regional settings perhaps ?

Hi Geir, Yes, I'm sure it's associated with your regional settings somehow - it seems to work ok here with a "," or a ".". What is the exact error (including any heading in the error box, if any).

From: mefazamy
Topic: 1268 Message: 1268

I have successfully used xmlog this year and I going to continue.
My problem:
I have been saving/copying my log to hard drive named log04. (No problem)
Also, I've been saving/copying up same log on a floppy. The floppy is filled to capacity with qsos made in 04.
I want to continue to copy qsos to be made in 05 onto hard drive named log04. (No problem)
How do I ONLY copy new 05 qsos onto a new small floppy? (The problem)
I want to now copy 05 qsos on to floppy without rewriting the entire 04 and 05 log files.

SEASONS GREETINGS TO ALL.

Topic: 1268 Message: 1269

Do a selective search for the qso's you want to put on the floppy. You can search within a date range and then save just that segment of your log.

In the date box you would put something like:

>01/01/05

This would be for all q's after Jan. 1, 2005

If you want to put an ending date to the range:

>01/01/05,<01/31/05 [no blank spaces]

would give you just Jan. 05

Date: 2004-12-31 20:59:19 UTC
From: Warren Dean
Topic: 1268 Message: 1270

Just make a new file called QSOs05 and then make that the default log to open when you start XM Log. I have done that with all my contest logs and it works well. One word of advice, though. If you have a CD burner, I would suggest using a CD instead of a floppy. Floppies can be corrupted far too easily to risk valuable log information on them. CDs are cheap and virtually uncorruptable. Just my 2 cents worth,

Hi Evan, There's no simple way to save just a subset of your log to a separate log file. The best thing to do is use a utility like WinZip to make a .zip file from your log and save that. This typically will double the amount you can save to your floppy.

I had previously be using a re-writeable CD drive here to archive things. Now I've got a re-writeable DVD drive from Plextor, very nice. It holds enough data such that I can back up my whole system onto three disks and it only takes 1-1/2 hours. Pretty amazing and it only cost $180.

From: Mike McAmis
Topic: 1272 Message: 1273

Hi Mike, I did some preliminary work back when LOTW was first made generally available. I have features that would download the list of LOTW QSOs available and mark the appropriate QSOs as QSL'ed/confirmed. However I was waiting for the ARRL to implement one last feature - Currently you can make a DXCC application and choose to have your LOTW info checked for DXCC credits but there is no way to download a list showing which LOTW QSOs have been accredited for DXCC. This is a feature that has been talked about but hasn't appeared yet. This means that this final step would still need to be done by hand. I haven't tried making a DXCC submission with the "Check my LOTW QSOs" checkbox set so I don't know how they are handling this. Perhaps they just provide a list about what credits were taken from LOTW or perhaps they don't and you have no idea of which ones were used? Has anybody tried this?

One issue I see is differentiating between an eQSL and
a physical card. If I have a date entered for an
eQSL, that is fine for DXCC, but if I need a physical
card for WAZ or some other non ARRL award, this might
become a problem. Being able to enter a non date like
LOTW in the QSL rcvd field would help determining if I
have a physical card in my file or not.

Although it may complicate some things, I'd recommend against the "dual use" of the received date field. Regardless of the type of QSL, the received date is important for me.

Instead, I'd recommend different "flags" for the cards, "physical", "eQSL", "LOTW", and allow the flags to be user defined to create other categories of tracking the cards.

Last time I checked, eQSL's are not acceptable for DXCC from the ARRL, unless the eQSL is "signed" by the sender, which means you have to get it printed, send it to the person you would have QSL'ed in the first place, then get it back. Have they changed this requirement?

My other experience with both LOTW and eQSL is only about 1/3rd of the contacts I make actually get confirmed by LOTW and eQSL (combined) , making both less reliable than good old fashioned cards, which I'd rather have anyway. Its sad and pathetic at the same time. LOTW is too difficult for most people to use, and eQSL isn't accepted by the ARRL.

My initial code for LOTW importing set the QSL Received date to the current date (unless it was already set) and added "LOTW" to the Notes field so that a search could find these entries.

Some have suggested that a seperate date field should be added for LOTW confirmations but I think that this is overkill and would make searching for confirmed entries more difficult.

I do like the idea of adding a QSL Source field that could be set to LOTW or whatever. I would make it an optionally displayed field like the recently added Time Off field and position it below the QSL Received field.

Others have suggested that the DXCC tracking info (Submitted/Confirmed/Rejected dates) should also include some kind of indication that the confirmation was done via LOTW.

Hi Mike,
The DXCC record really doesn't care if the
confirmation was done via LOTW or a physical card.
Where it does matter is determining which cards you
need to send vs. what is electronically confirmed.

As for the QSL's, having check boxes for LOTW and
physical cards would help when tracking and submitting
for other awards. I for one will try and get the
cards whenever possible. Until CQ and other awards
sponsors start taking signed LOTW QSL submissions,
LOTW is really a waste of time rather than the time
saver it was intended to be.

Looks like some pressure on the ARRL and by the
ARRL to standardize and simplify LOTW similar to the
way cabrillo log file format was pushed on everyone is
needed to make LOTW worth the effort.

On another note, having just reconciled my online
record with my log file, I found a number of confirmed
contacts taken from the multiple entries of some of
the cards. Apparently, when I applied with cards, all
of the contacts listed on each submitted card was
entered into my record even though it was not listed
on my application. That created quite a chore for me
to reconcile each country, band and mode to match what
was on file. I would have never known that these
contacts had already been credited to me if I had not
checked it on-line.

I personally would like to see a date for LOTW separate from the usual QSL date. I have several QSOs confirmed with cards and LOTW and I want to keep the dates of each separate.

It also needs to be the date of the QSL matchup as shown in the LOTW records.

I also don't want anything else polluting the "Notes" field which I already use extensively.

In most Windoze versions there is an icon in the 'Control Panel' called sounds and audio or media. Click on the icon and then click on the sounds tab. Check to see if there is a sound assigned to the beep. If not assign one.

Hi Ed, DTR is always enabled for XMLog comm ports (Rig, Packet, Rotor). If you need RTS/CTS flow control for your rig port, enable the appropriate option using the "Options/Packet Options" menu item.

Mike,
Right click on spot, select set rig to <freq>, the mode will change,
but not the frequency. I have it set-up correctly and am on VFO A. Any
ideas

Hi Ed, It turns out that the OMNI VI doesn't like the mode/frequency changes coming at it to quickly. I've added a half-second pause between the two commands in version 4.86 and this seems to fix the problem. The current test version of XMLog is available at www.xmlog.com/beta

Mike,
I have the same thing happening (sometimes) with the Argonaut V. Will the change be applicable to that rig also?

Hi John,

Some TenTec rigs require a pause between commands but I don't have a default pause defined for the Argonaut V. However, you can specify a delay by adding a line to XMLog's config file, here's how:

Exit XMLog and open the file mlog.ini in the XMLog install folder (ususally c:\mlog) using a text editor like WordPad or NotePad.

Scroll down to the rig parameters and add the line:

RigSetDelay=.5

The actual position in the file isn't critical. This will add a half-second pause between commands sent to the rig. If this fixes the problem I'll change XMLog to include a default pause for this rig.

Am new to the newsgroup but have been using MLOG for several years and really love it. Now I need to send Mike some green stamps!

Can the ADIF files be uploaded directly into LOTW? Also, Is it possible to merge several MLOG files into one big Excel page?
Would appreciate an answer, particularly for the LOTW part.

I am a new ham and just started using XMlog this month. I really like it for day to day use but... I want to work the North American QSO party this weekend. XM seems a little cumbersome to do this. Is there any better program for this contest? Or is there a way to use XM and convert it to Cabrillio so it can be submitted.

WriteLog is a great contesting program.

http://www.writelog.com/

I use WriteLog for contesting, and import my contest logs to XMLog for
"log management".

From: Mike McAmis
Topic: 1292 Message: 1294

Hi Bob, XMLog isn't designed to be contest logger. Most XMLog users (including myself) use some other program like WriteLog, CT, or N1MM logger and then move the QSOs over to their log file using ADIF. This is probably the best strategy regardless of the program you use to do your day-to-day logging.

Check www.n1mm.com (N1MM logger, freeware), www.writelog.com (WriteLog), and www.k1ea.com (CT, freeware) for more info on these popular contest loggers.

Export to adif, sign it and upload to LOTW. Just did
that recently, only I needed several adifs, one for
each callsign I have held. Now have over 14,000 QSO's
in xmlog and on LOTW. The big problem is that there
is no way to get the electronic QSL info into xmlog
except by hand. I will probably only mark QSL's that
I submit via LOTW for DXCC credit.

Hi Bob, You can export each log into a seperate ADIF file and then create a new log file and import the individual ADIF files into this new log.

1299. Back Up Disks

Yahoo group: XMLog
Date: 2005-01-15 22:34:49 UTC
From: Rayford Cunningham
Topic: 1299 Message: 1299

I have about 30,000 entries and tried to back up.

1. Tried floppy (1.4 MB) I realize this would not be enough room, but I thought it would ask for more disks. The message was "use a larger disk".

2. Tried Zip (100 MB) and got the same message, use larger disk. My radio computer is not equipped with a CD burner.

I must be doing something wrong! Please help!

Rayford,

Can you break the log down into 2 or more parts, and then export each part
onto floppies?

Just a suggestion..

Don't know how you tried to zip your log onto multiple floppies but one good utility that can handle this is WinZip - Go to www.winzip.com and download and install the "Evaluation Version".

Topic: 1299 Message: 1302

Can you give us some more detail? The entire
directory should fit on a 100MB ZIP drive. How are
you doing the backup? The "backup log" command off of
the file menu creates a log in the "Backups"
subdirectory. All you should need to do is copy the
latest file to the ZIP drive.

Another way is to use WinZip, which will span multiple
floppies. My log is around 15,000 entries and is only
3.6MB. Your log should only be about double that.
That should easily fit onto a ZIP drive.

Another suggestion would be to backup the log locally
and run "Compact Log" off of the file menu and see if
it significantly reduces the size of your log file.

Just how big is your .log file?

From: Robert Dixon
Topic: 1299 Message: 1303

Hi Ray:

I have MLOG installed in My Computer and have each paper logbook entered separately (log 10, log 11, etc) Each on is about 900K and can be easily installed on a 3.5. This holds about 1300 QSOs. I have a burner and have everything for MLog saved on one CD. My suggestion is to go to the local Circuit City, etc. and buy a CD burner. They are now under about $50 and probably will include InCd. The smallest pack of CD-RW disks contains about 6 and will cost about $10. This will allow you to have a giant floppy that contains 750 megs instead of 1.5 megs that are found on a 3.5 floppy. I just got done updating an MLog file and copied it to the InCd disk. The next log will be edited and then added, an so on until I get all 13,000 QSOs ready to uplink to LOTW. Even if you computer dies right after you save the files to disk somebody nearby will have a computer that will allow you to run the logs. (A friend of mine had 10,000 QSOs vanish because he did not back up his files. I keep the original paper files and the MLogs as well just because I'm super cautious.)

Good luck and good DX

Rayford
I used a utility called 'CHOP' to move files from an old pc to my new
one using 1.4M floppies. It chops large files into small ones that can
copied to any size disk. You could use it to break your Log into
smaller files that would fit on the Zip drive. If you need to recover
your log the same program will merge the small files back into your log
file. It is shareware, less than 10 bucks and can be downloaded from
www.sinnercomputing.com. Joe...

1305. deletion of entries

Yahoo group: XMLog
Date: 2005-01-24 16:41:23 UTC
From: Robert Dixon
Topic: 1305 Message: 1305

Want to upload ADIFs to LoTW using MLog. Over 10,000 entries to edit. I would like to take out the NOTES and the ? mark for QSLs sent. Can't believe that I must MODIFY every entry and remove them that way. Can MLogs be converted to Excel where the whole column can be deleted and then imported back into MLog format?

Also, is anyone using MLog CW and RTTY programs for the Timewave PK232MBX TNC? A friend of mine is using it on his Kantronics and says it's great. I am currently using the old AEA PCPakRatt 2.1 windows program. It works great but I can't get a colored background which is tough during long contests. (PkTerm for Windows has such a slow dropout time that it is useless for CW.)

I've never edited anything out of my logs I've sent. I think all the
extra stuff gets filtered out in the signing process anyway.

Hi Bob, LoTW ignores ADIF fields that it doesn't use.
Have you tried the "Options/Colors" to change the packet window background?

If I recall correctly, only the <your callsign>.log file needs to be backed up. The other files can be reinstalled from the downloadable zip file if required. I'll check this tonight when I get home.

In addition to any log files (whatever.log) you can save:

layouts.mdb - Custom label layouts
mlog.ini - Log/Packet options
spotinfo.ini - Packet Spots Map options
histinfo.ini - Packet Spots History options
dxcalls.ini - DX/Callsign List entries
report.ini - Display/Excel options

With a search key of
=N9*

The following is from the HELP file:

A simple wildcard for the Name field could provide = as the
comparison and a value of john* to search for fields beginning
with john (the * matches any number of characters). Here are
a few variations:

john matches john exactly
=john matches john exactly
=john* matches fields starting with john
=*john matches fields ending with john
=*john* matches fields with john anywhere

1315. Not sure about what to do with adif upload to eqsl.cc

Yahoo group: XMLog
Date: 2005-02-03 17:00:32 UTC
From: mefazamy
Topic: 1315 Message: 1315

I've tried to upload to eqsl with xmlog 4.79 exported to adif.
I got back the message about 0 records uploaded, and a list of
callsigns with other info, and "Dupe" in the last column next to each
callsign.

I've read message #1091 in your archives.
Is the info in this archive relevant to me or do I have another kind
of problem? (I don't understand the info in the message anyway.) :-(

Hi Evan,

As I understand it any callsign that comes up DUPE on that list has
already been successfully uploaded by you in the past. Anything else
that shows up other than DUPE is a file with some information eQSL will
not accept and must be corrected and uploaded again. Hope that is
helpful to you?

Tnx John, I realized that, BUT this was a brand new, different log.
It had qsos from Jan. 2005 that had been never uploaded before.
So, that's the confusing part. And when I first uploaded that log I
got a message about 0 files accepted.

However, there is evidence that the log was uploaded anyway because
I'm getting e-mail about new qsls that have arrived in my inbox.
Very strange, indeed. :-)

I'll keep workin' at it, though. :-)

Hi
I had a similar problem and couldn't find what was wrong. I went to the
eqsl.cc and found an e-mail address where I explained the problem and asked
for help.

They e-mailed me back asking that I send them a copy of my ADIF file and
about 2 hours after sending the file they had the problem solved and my log
uploaded. I have since uploaded additions to my log without any problems.

I suggest you contact them directly, they were very helpful to me.

First make backup copies from c:\mlog to another folder or another drive of--
--*.log (your log files)
--layouts.mdb (your custom QSL and label layouts)
--mlog.exe (your current version of the program, in case you need to go back to it)

Then simply DL the new version, unzip it, and run SETUP.EXE.
(4.90 is on the beta site, www.xmlog.com/beta)
It will probably run "right out of the box" (mine always have, including 4.90) and you'll thus have no need of those backups.
But they're there in case........

1323. Re: Installing new versions (saving old info)

Yahoo group: XMLog
Date: 2005-02-04 20:51:52 UTC
From: Mike McAmis
Topic: 1319 Message: 1323

Hi, When you download a new version's zip file, unzip it and run setup.exe the install process will not reset any options settings or cause you to lose any of your own custom label definitions, etc.

The only reason I listed the various files where information is saved by XMLog was for the benefit of anyone who wanted to save this info in case of hard disk crashes or whatever.

In this day and age of inexpensive writeable CDs and DVDs it's easier to backup the whole install folder. Of course backing up just your log file(s) is a quick way to prevent simple screwups that occur when you're importing or deleteing log records. The "Options/Backup Log Options" provides an automatic way of doing log file backups.

1325. Re: Log Queries, another GREAT option

Yahoo group: XMLog
Date: 2005-02-06 13:46:05 UTC
From: Al Ludwick
Topic: 1311 Message: 1325

Scott,
Starting with version 4.84, there is another search option for the wild card searches. The quoted text below is from the "change notes" on version 4.84.

"There is a new form for search keys when you want to search for log records containing a certain string anywhere in the field. The old technique was to use a wildcard of the form =*xyz* to find all log records that contained xyz in the field. You can now also use a search key of the form ~xyz to save some typing."

I use this feature, coupled with one of my "programmed" function keys to do a quick log search when starting a qso. Here is how I use it. I enter a few characters of the call into the call field. Usually the first few, such as "F8Z" so the program shows the country and bearing. The I press one of my programmed function keys. The function key is programmed to:
- move the cursor back to the beginning of the call field
- insert the tilde
- insert an "enter" character

So by entering a few characters of the call and pressing one key (the function key), the program does a quick search. Of course, it also works for the other searchable fields.

(yes, I could accomplish the same thing with a bit more "programming" of the function key to insert the old sequence. When I asked Mike about a quicker way to do the searches, I originally hoped the new feature would be implemented so that the user could just enter a special character, such as a period, at the end of the call and accomplish the same thing. When it was released using the tilde, which must be entered at the beginning of the field and also requires pressing the shift key to get the tilde, I started looking for ways to speed up the process and developed the programmable function key solution. The program I use to set the function key data is avaliable at www.regsoft.com/keys)

At any rate, this feature is very nice and I've been using it daily for several months now. Thank to Mike for a great program.

1326. Printing custom labels

Yahoo group: XMLog
Date: 2005-02-06 18:56:56 UTC
From: Jim Henry
Topic: 1326 Message: 1326

Hello

I have set my XMLog to print directly on to my QSL cards. The page size is set to 6x4 with one record on a page. When I click on the print qsl label command a pop-up window tells me to use the file/print set-up command to set the printer page size to 6x4 or to press the ok button to continue using the existing page size which is A4. I am unable to access the file/print set-up command whilst this pop-up window is displayed but if I close it, it then cancels the print job. Any ideas how I overcome this problem?

I am using XMLog version 4.90

It seems to want your printer to be in the opposite
orientation (portrait/landscape) from what it is.

Try this:
Open the OPTIONS menu and click QSL LABELS LAYOUT. With the
QSL LABELS tab selected, in the ORIENTATION pane on the right
select the opposite orientation from the default one.
(Otherwise you'll have to do as the pop-up windows direct--
go back to SquareOne, select the print setup menu, and change
it there.)

Hope it helps.

That is a cool feature. I am sure there is a better way but I also found a quicj way to pull up qso's since a particular date - in the date field ">01/17/05"

This is a great progam!

1329. lookup problem

Yahoo group: XMLog
Date: 2005-02-09 03:51:35 UTC
From: N7MAL
Topic: 1329 Message: 1329

When I double-click on VP2V/K1ZZ, in the packet window, it says can't find VP2V and no QSO's found. When I right click on the same entry and click on show all QSO's it shows the previous QSO's just fine. I tried the same test with PJ7/ND5S & FO/N6JA and they worked just fine.
Any Clues..??..

Hi Mal, What version are you using. I made some changes recently (versions 485 and 4.86) that should fix this problem. You can try the current version available at www.xmlog.com/beta

1334. Printing mailing addresses directly on backs of QSL cards

Yahoo group: XMLog
Date: 2005-02-12 03:23:42 UTC
From: W3GERry
Topic: 1334 Message: 1334

I've long since deleted all the posts, but around three months ago someone asked if there's a way to print four QSL cards to a sheet of card stock, then print the four addresses on the other side.

The problem was that after you print the QSL cards in
1 2
3 4
order on one side, when you print the addresses in that order on the other side it's really
2 1
4 3
order relative to the QSL-card side.

FWIW, I've now thought of a way to do it that I find to be reasonably convenient:

1. Cut the card stock in half to make 5.5x8.5 sheets
2. Make a page layout specifying ONE column of two rows on these "half-sheet". (You can edit this page layout and your regular page layout into the library LABELS.INI, and just call the needed one from the library.)
3. Print all your QSLs on the 5.5x8.5 sheets.
4. Put the sheets back in the printer, oriented to print the second side. (On my HP PSC-500 printer I also have to reverse the order of sheets-- you may not have to, depending on how your printer stacks output.)
5. Print all your mailing labels.

It's similar to the method Mike proposed at the time, but instead of cutting the stock in half, that method was to print two cards on a full-size sheet, then the two corresponding addresses, then two more cards, then those two corresponding addresses.

73 de W3GERry

P.S. For reference, here are two layouts I edited in to LABELS.INI. The one named QSLsheet is my regular one for printing four cards toa full sheet. The one named QSLhalfsheet is the new one for printing two cards on a cut sheet.

```
[QSLsheet]
;Prints 4 QSLs to a
; 11x8.5 sheet of card stock, landscape orientation
LabelInches=1
```

```
LabelVMargin=1.2
LabelHMargin=0
LabelVSpace=3.5
LabelHSpace=5.5
LabelHCount=2
LabelVCount=2
LabelHPage=11
LabelVPage=8.5

[QSLhalfsheet]
;Prints 2 QSLs to a
; 5.5x8.5 sheet of card stock, portrait orientation
LabelInches=1
LabelVMargin=1.35
LabelHMargin=0
LabelVSpace=3.5
LabelHSpace=5.5
LabelHCount=1
LabelVCount=2
LabelHPage=5.5
LabelVPage=8.5
```

Topic: 1332 Message: 1335

This guy has a great collection of slashed zero fonts. http://www.k8zt.com/
Everyone will have a favorite but in my case, being visually impaired, ProFont works best in Mlog. In DXTelnet I use Mincho Light. Follow his instructions for installing and you will have no problems.

Hold the phone! I just found the "Ordered Printing" option
for the PSC-500 printer setup.

Now if we can just get Mike to put that in as an option on the
Labels Layout window, like he put in the Orientation
option.......;-)

1337. Timing Out, Something's Changed

Yahoo group: XMLog
Date: 2005-02-13 04:08:37 UTC
From: dakotaphotog
Topic: 1337 Message: 1337

I've been a XMlog user for the last few months, and I love it. My computer is constantly online (I love cable too!) so I've taken advantage of the Callbook lookup on QRZ.com. Great feature. But over the last couple weeks, something's changed. I cannot seem to get the online lookup feature to work. It can't find the names, gives me a "Can't get data from QRZ.com - Request timed out" pop-up screen. Thought maybe it was a temporary problem on the QRZ.com site, but now I'm beginning to wonder. I can look up calls manually on the QRZ site, but it no longer works thru XMlog. Is there a subscription service I need, or what? Don't know what other info you may need (I use Mozilla as a browser) but can someone give me an idea what's wrong?

Thanks for your input guys, but everything you've suggested, I've already tried. And just for the record, it has been exactly two weeks, and I have not logged any addresses (I double checked, they're NOT there). I CAN get the addresses manually from QRZ.com. I've closed and re-opened the XMlog program, I've rebooted the computer, even rebooting from a complete shutdown doesn't seem to do the trick. Any other ideas would be appreciated.

I'm really surprised, (no depressed), that no one has given you the solution. The problem actually began showing up a couple of months ago with other software. and when it first happened to MLog it was easy to identify.
Turn-off/disable your firewall, most probably Norton, but the latest up-date from Micro-Junk also screws around with port 23. Every time I enable Norton, every time, 100% of the time, MLog can no longer contact QRZ, even though Mlog is enabled inside Norton.
I have a router so I have no need for a firewall.

Hi, Thanks for the note about http://www.k8zt.com/zero.html - Good to see this info collected in one place along with the useful explanations.

I've tried out the mono-spaced fonts provided on this page using my packet window and have included a couple of comments. Remember that results may vary with different monitor resolutions (I'm using 1024 by 768 here).

Fonts from the k8zt page, best to worst:

Anadale Mono - OK but a bit jagged regardless of the Size setting.

Sheldon 8, 9 - Looks good with Size=9 but is a bit small for my tastes. The mono-spacing is not quite right with Size=8. Also the lower case "a" is off a bit in it's vertical alignment!

Crystal - Looks OK with Size=10 or 11 but a bit jagged.

ProggyClean - Looks OK with Size=11 or 12 but sometimes characters can interfere with each other (like MM).

ProggyTiny - Looks good but small with Size=11.

ProggySquare - OK with Size=12 but crowded vertically.

Crisp - Not bad, has a compressed look at smaller sizes and poor at large sizes. Looks best with Size=11.

ProFontWINdows - OK at Size=9.

T92PlusPC - OK at larger sizes 11, 12 but a bit jagged.

Ham, Ham Gothic, Ham Mincho - Jagged, crowded.

Standard Windows fonts:

FixedSys - Nice bold look.

Terminal - OK bold look at Size=9, very nice at large sizes 12 and 14.

Courier New - My favorite packet font (at Size=9) but without unique zeroes and O's. Looks good with any Size and with Bold enabled. I once tried to create my own version of this font using some freeware font editors. My first try was to edit the current definition of zero but the results were always ugly. I then tried to replace the definition of zero with the definition for the "ALT 0216" character which is included in Courier New but none of the editors I tried would allow me to do this. I should probably give this another try

someday.

Mike - W1ECT

I agree with Mike on this, I also have looked here for other slash
zero fonts.

http://www.qsl.net/wa6axe/fonts.html

YMMV, I prefer to use Terminal not only for packet, but printing QSL
labels.

1349. Asiatic Russian prefixes

Yahoo group: XMLog
Date: 2005-02-28 09:21:51 UTC
From: Dave Sergeant
Topic: 1349 Message: 1349

Yesterday, while working a few slots in the UBA contest (which appeared to be dominated here in G land by the Russians..) I noticed that some of the Asiatic Russian stations were being incorrectly identified as being European Russia. Looking at the countries list (prefixes, prefixes.new) I see that there is a long but not complete listing of the R*9 prefixes which are shown as Asiatic Russia but it is not complete. In particular RF9,RG9, RN9, and RY9 are omitted. So contest stations like RG9A show as European. Ideally anything with a call R*9* or R*0* should be Asiatic. I have amended my files to include these.

I am in fact using XMLog 4.56 as I have never seen need to update, so maybe this has been changed in current versions. Are up to date country/prefix lists seperately available? And why are there seperate prefixes and prefixes.new files, are they both used?

1353. XMLog & microHam USB Interface

Yahoo group: XMLog
Date: 2005-03-05 18:02:11 UTC
From: w3hq
Topic: 1353 Message: 1353

I really enjoy XMLog. It has everything I at this time. One feature I have yet to get operational is KB CW and rig control at the same time. My laptop only has USB so I started with an "off the shelf" USB - Serial converter. It worked well controling my K2/100. To use KB CW I realized I needed andother COM port. I ordered the microHam and it works well, without RF hash, but I have yet to figure out how to get the virtual second COM port.

If any one out there has cracked the code, please me know. Admittedly, I am a knucklehead when it comes to computers so I may need a detailed suggestion. Thanks

Yahoo group: XMLog
Date: 2005-03-06 17:16:26 UTC
From: Mike McAmis
Topic: 1347 Message: 1360

I was told at some point that the FT-900 used the same CAT commands as the 890 and 840. I've done some web searching and the only info I've found mentions that the "update" command that gets data from the rig is "80 02" which isn't the same as the 890/840 (which is "10 02"). Does your manual have documentation on the CAT commands, and if so can you make a copy and send them to me?

Mike - W1ECT

Hi Galen, Not sure what the problem might be. The FT-817 supposedly uses the same CAT command set as the 857 and 897 and my 857 seems to work OK both getting and setting the mode/frequency. Can you set the mode/frequency using the packet window? You should also double-check that the baud rate in the "Options/Packet Options" matches the baud rate setting for your rig.

Likewise entering TO4WW (Juan De Nova), TO0O (Martinique) or TO0R (Reunion) all are defaulted to France. I have never seen anything that assigns these calls to a specific entity other than France and I don't see how MLOG can make an accurate identification. TO0R and TO0O are obviously conflicts.

There is probably something corrupt in the prefix file. I haven't used a new prefix file for a long time. I keep mine up-to-date manually and because I'm visually impaired I needed special requirements in the prefix file.
You can update the prefix by clicking on DX and then country list.

From: D.W. Jones
Topic: 1363 Message: 1369

If there is any provision for updating the country list by clicking on "DX > Show Country List" I sure don't see it. I would be happy to be corrected. You CAN add a specific non-conforming CALLSIGN (not prefix) to the Callsign List by doing "DX > Show Callsign List". This is handy when forthcoming DXpedition callsigns are announced.

From: N7MAL
Topic: 1363 Message: 1370

In the logging screen click on DX
Next click on callsign list
Next click new

Put in the callsign and the select the country you want associated with it.

Last click again on DX and then click on update.

Date: 2005-03-08 15:37:07 UTC
From: na5s@zianet.com
Topic: 1371 Message: 1374

Come on guys....... XMLog cannot differentiate between "TO" callsigns or "FO" callsigns or "3D2" callsigns, etc...... just like any other logging program out there. The user needs to input the information on different DXpeditions as to the actual location for DXCC status, in the "callsign list," since many prefixes can accommodate several DXCC entities.

When stations like K7C, due on the air from Kure Atoll in September, there is not one logging program out there that will place it correctly! A little common sense and investigative work on the internet will place most DXpeditions, but the user needs to make changes in XMLog on the callsign list. I find ng3k's "Announced DX Operations" page invaluable at: http://www.ng3k.com/Misc/adxo.html

1375. Re: TO7C

Yahoo group: XMLog
Date: 2005-03-08 16:28:48 UTC
From: Mike McAmis
Topic: 1371 Message: 1375

XMLog can't automatically determine the DXCC countries for several groups of callsigns that are assigned more or less arbitrarily. This includes 3D2, FO0, TO, VP8 and ZK1. This "problem" should not be handled by hacking the prefixes list, use the "DX/Show Callsign List" menu item to associate specific calls to DXCC countries. I think you'll find that the differences between who is seeing various calls being associated with different countries is due to different entries in the Callsign List - XMLog does not overwrite this list when new versions are installed so people that have installed later versions of XMLog will have different collections of callsigns in this list.

I usually scan my weekly DXCC bulletin from the ARRL looking for 3D2 or TO callsigns or special calls like K7C (Kure) or DX0K (Spratly) and add them to the Callsign list.

From: F. Curtis Lambert
Topic: 1371 Message: 1376

My comments are meant to be constructive and helpful without any critical motives at all. The designer has provided ways to properly change the log, but the Awards DXCC section did not reflect the changes. (It could also be my error too. I am very new to this system.) Knowing that is important for all of us. Without this knowledge we may be in error when we go to submit our award applications.

If and when it is changed . . . well so be it, IF it can even be changed. Some of these calls appear very arbitrary. (No further comments about the French.) But for now, we know and appreciate the opportunity to inform all of our findings.

Again, I 'tip my hat' to Mike, W1ECT, for his excellent work and appreciate his continuing effort to support this product.

The awards section 'DOES' reflect the change provided you followed all the rules. Using TO7C as an example: Here is the line in my DXCC awards worked/confirmed

"" FY French Guiana FY5KE FY5KE TO7C "".

I up-dated TO7C in the callsign list prior to working/logging TO7C. If you worked TO7C, or any non-standard prefix, and logged it before you up-dated the callsign list then the only way you can straighten it out is to manually edit the entry.
Mike created a good, simple, system but in order for it to work it must be up-to-date.

One suggestion would be to have XMLog use AD1C's
country file which get's updated several times a year
and includes zone information as well. You can also
read his file with a text editor and add the entries
yourself.

1380. Re: TO7C

Yahoo group: XMLog
Date: 2005-03-08 21:11:49 UTC
From: Mike McAmis
Topic: 1371 Message: 1380

If you have some log entries for a station like TO7C whose DXCC country has been "mis-guessed" one way to do a low-keystroke update of the Country field is:

- Add the Call/Country to the Callsign List using the DX/Callsign List menu item.

- Select the entries with the wrong country, hit the Modify button, erase the bad country value, and then hit OK. The DXCC country should get "re-guessed" and set to the proper value.

Adding the Call/Country to the callsign list does not change the DXCC country for existing log entries. After all, there are those of us who have logs that contain calls that have been used for more than one country!

Mike - W1ECT

Here is good list with Telnet addresses. Telnet is different that WWW addresses, don't type WWW. Type as given.
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=3195

Here is a general article that describes setup and includes reference to XMLog. It applies to the local cluster that I use, KA5EYH, but you can insert a cluster closer to you from the list above. Or try KA5EYH. http://www.stdxcc.org/Member/KA5EYH%20Cluster.pdf

My first message didn't pass all of the url for the article. It should be http://www.stdxcc.org/Member/KA5EYH%20Cluster.pdf Type in all up to and including the .pdf. It's in Adobe.

I use a number of DX Cluster telnet nodes, but most frequently I use K8SMC. For starters you can click on Connect > Internet Connect and then enter 198.109.212.235 in the dialog box. It will ask for you call and some other info (most of which you do not need to enter any info for).

I hope this is helpful.

Also you don't have to open a website, sign on to the cluster, and have it "pass" the data to XMLog. XMLog can sign on to the cluster and the data is gathered directly by XMLog.

Open XMlog.
From the main XMlog screen go "Option", then select "Packet Options and Port Select"
You may want different settings later, but to start check "Show packet window when XMLog starts" and check "Show spots map window when packet window starts". Under History check "Save". Been "On" Highlight "On". Others default.
Click on PORT tab on this window.
Check "Internet" Type in cluster address that you want to use from list. I use dxc-ka5eyh.drnet.com. No WWW. No http. This is a telenet address.
Later, come back here and click on PACKETCLUSTER ALTERTS tab to setyour filters. This can be done later after you get signed on.
Click on "SAVE" button.

Close XMLog.
Open XMLog.
You will now get three screens when you start the program.
Go to XM Packet Cluster screen. It should be asking you to "Please Enter Your Call:"
Enter your real call. This is your password.
If you have never signed on to any cluster you must provide some basic information. Such as the name you want to be called by and your longitude and latitude (you can get this from qrz.com if you don't know it). And a valid email address for the sysop. This is not distributed.

After successfully signing on, do a sh/fdx command from the bottom command line of the XMLog Packet window. This will populate both the XMLog Packet window with recent spots as well as the Spots Map. The Spots Map is one of the best cluster tools available.

After you play with PacketCluster in XMLog you will want to go set your filters for the bands and modes that you work. Once you see the benefit of the Spots Map you will want to setup the XMLog Callbook fuction so that you can click on any call on the map and get qrz.com information.

If this is confusing, and it can be to setup, email me with questions.

From: Mike McAmis
Topic: 1388 Message: 1389

Hi - Here's another on-line list of DX-Spider and AR-Clusters nodes
that are available via the Internet:

www.cpcug.org/user/wfeidt/Misc/cluster.html

Select the "Options/Packet Options" menu item and pick the "Port" tab
and then set the "Internet" option and then use the "Save" button.

You can then experiment with the addresses from the list using
the "Connect/Internet Connect" menu item from the Packet Window.

Once you find a node you like you can configure things such that you
get automatically connected to a particular node when the Packet
Window starts up. You can either set the address within the Packet
Options Port options or set the name of a node file you've created.
Node files will automatically fill in your callsign, etc so no typing
at all is needed to sign on (see the help file for more details on
Internet connections and creating node files).

The list I use is at: http://telnet.dxcluster.info/

Just highlight one of the node calls and what you want is the raw address (not the telnet:\\ part). For example "k6exo.dyndns.org:7300" or "wt6g.com".

Don't forget that you can make a file that also has all the commands to log into the node and just use that filename as the node name. Take a look at the examples in the xmlog directory on your machine. For example "dx.nod" is a good one to look at and modify.

From: Mike McAmis
Topic: 1393 Message: 1394

Hi Howard, The pop-up menu displayed by right-clicking on certain fields (name, county, state, address, etc.) is supposed to include the option of setting that field from the callbook. This feature seems to have gotten lost in version 4.80. I just posted a fix as version 4.93 in www.xmlog.com/beta

Until you install this fix you can use the "Edit/Set Fields from Callbook" (Ctrl+F) menu item to set all the appropriate fields from the callbook (only sets fields that are currently blank).

Thanks Mike. I knew that there was something missing but I had a problem explaining what was wrong. Thanks for the fix. I will install Ver. 4.93.
I use this a lot. I leave my program directed to Buckmaster but if they don☐t have the info, I change the lookup to QRZ and that is usually more up to date. I don☐t like to leave it on QRZ all the time because of the pauses and the lack of connectivity sometimes. Thanks again for a great program.

1396. Spots map: disappearing spots (& spot mode question also)

Yahoo group: XMLog
Date: 2005-03-27 08:01:52 UTC
From: ei4hq
Topic: 1396 Message: 1396

Hi,

I've just installed v4.93 (from 4.79) in an effort to 'cure' a problem I've been having. Unfortuntately no such luck, so perhaps someone can help?

On my spots map, spots appear very briefly (circa 0.5s) and then vanish. All filters are disabled and spot lifetime is 30 minutes. The spots history and packet windows are fine. This looks to me to like a graphics refresh problem. Help - this is driving me nuts! I didn't have this problem until v4.79 I think...

And a clarification:
2. In v4.79, XMLog decides sometimes that a spot on e.g. 7.061MHz is CW and not LSB? This causes a problem when the rig is set to 7.061 as the mode is wrong... am I missing something basic here? I haven't seen this happen in 4.93 yet, so maybe its been fixed? (assuming there was a problem in the first place)

Regards
Cormac, EI4HQ

Hi Cormac, re question #2:

At some point between version 4.69 and 4.79 I changed the split point for 40 meter CW and Phone from 7.050 to 7.070. I know this is pretty arbitrary due the the differences in allocations here in North America versus those in Europe but this seemed like a reasonable compromise.

Yahoo group: XMLog
Date: 2005-03-28 06:46:33 UTC
From: Cormac & Suzanne Gebruers
Topic: 1396 Message: 1399

Hi Mike,

>> At some point between version 4.69 and 4.79 I changed the split point for 40 meter CW and Phone from 7.050 to 7.070.

Ah Ok - the only 'problem' here really was I wasn't sure how the cw/ssb division was determined. Its a minor thing really and only becomes a commonplace issue during contests when every last KHz in a subband is being used. Just a thought, but could band limit information be set via some kind of 'dat' file thereby making it editable by the end user?

>> Do you have the "Show Un-needed" and "Show Inhibited" spots options enabled?

Yup.

'Murphy's law' has just kicked in: the problem seems to have resolved itself... I spent quite a while yesterday messing with filter settings etc. and eventually something must have reset itself (rewritten spotinfo.ini and/or mlog.ini I now realise). At the moment everything is fine again... I've tried to reproduce the problem but without success. If it does re-occur, I'll be sure to immediately take a copy of the .ini files and send them to you. I suspect some combination of filter settings is causing unexpected behaviour.

Anyway, thanks for the replies.

From: Mike McAmis
Topic: 1402 Message: 1403

Hi Dan, I never found that there was a dependable link between callsign and zone for VK and Russian callsigns. However XMLog is supposed to fill in the zone for Canadian QSOs if the province field is provided. Apparently this bug has been there for quite a while and I never noticed it until I was checking out your question. I'll post a fix to this problem next week sometime at www.xmlog.com/beta

Another thing I noticed was that the software provided by most of the callbook vendors does not break out the province from the address (only Buckmaster does it). As a result the province field is not getting set when you use the "Set fields from callbook" menu item or if you have your defaults configured to set the state/province field from the callbook. This means that I'll have to scan the address info provided for Candian calls and extract the province myself. I'll also include this change in the next version.

Tom,
I use Digipan for my PSK work. It exports ADIF files nicely which
I can import into XMLOG easily.

Topic: 1392 Message: 1408

Thanks for the link. I downloaded the file and tried to install it on Win2K SP4 and I got a message from the install program stating that some of the files on my system were out of date and did I want install to update them. I answered yes and followed the instructions to reboot. Then I ran install again and got the same message. This repeated several times. I tried uninstalling ver. 4.79 and deleting all of the files in the directory. This did not help. I was able to reinstall 4.79 with no problems.

I then tried to install it on another computer running WinXP and it installed over 4.79 with no problems.

The Win2K machine is a Dell laptop that I use for logging, so I would like to run on that machine if possible. I am using a Kenwood TS-2000, so the new fixes would be helpful.

Any ideas?

Tnx,
Craig

From: taiwanmd
Topic: 1416 Message: 1416

Hi all,
I am KF4O, presently in Taiwan (BV8/KF4O). Had a older version of XMLog that I used several years ago, and have just upgraded. Wonderful program...just this evening discovering many new aspects....I love being able to put in the callsign, hit CTRL-F and download QSL info from QRZ.com...fantastic.

Being in Taiwan, it is interesting that I am able to get a ham license, but am prohibited from having a radio...go figure. But I have recently discovered EchoLink and also CWcom. So...finally I can put XMLog to use!

One problem I discovered this evening though was that when I hit "Display Short" (or 'medium' or 'long' or "all entries for this call"), I get an invalid page fault. (Am using W98se).

thanks for a great program Mike, and great to have this support group around. Look for me on EchoLink or CWCom.

Hi Randy--

[I know this isn't a whole lot of help, but it will at least tell you that your problem is probably not in XMLOG]

I've been using XMLog for nearly four years, on several machines, through many versions up through 4.96, under Windows 98 (SE for about the past year). I use the Display feature quite often. I have never gotten invalid page fault.

Hi Randy - Sorry but I haven't been able to re-create the problem here. We've only had one other XMLog user who has seen this but we we never able to pin down the cause. It only seems to happen when generating reports using the Display menu items (and not other reports like those generated using the Awards menu items).

Thanks Mike for a great program...I'm sorry my system is misbehaving. I tried a complete uninstall of 4.96 and reinstalled an earlier version (4.79), but prob persists. Kernel32 errors can come from all sorts of things, from drivers to damaged swap or password files. I do not get this message with any other program. Wondering if you might have an idea where I could start looking. Does the display depend on printer drivers or settings or more on video? Does it use rundll32 or spool32 or would it be more like an Excel program?? At least maybe I can try a few things...
The program works great as is, and I am certainly still using it daily.
thanks again,
Randy KF4O

One of the biggest problems with Windows are the video drivers. I would try and get the latest version of your video drivers from the manufacturer and see if that doesn't cure it.

Thanks Mike,
actually, I already have the most recent video drivers, Direct X, etc.
Have tried cutting back on my graphics accel, tried changing my
config.sys, stopping my virus programs, clean boot with nothing else
running....but alas, all to no avail!
Anyway, except for this area, the program works fine. If anyone else
has any suggestions, I'm certainly open.
thanks for any help,
Randy, KF4O

I ordered the wrong type of cable and the seller refused to take it
back. I'm poorer but wiser, and still stuck with the flat wire cable
that I will NEVER use.

Anybody who's willing to pick it up can have it.

From: Mike McAmis
Topic: 1426 Message: 1429

Hi Kevin - First are the spots being recognized? If the spots are being recognized by XMLog they will be followed by an information line with the DXCC and QSL status - unless you have this feature disabled, check the setting using the "DX/Packet Alerts" menu item. If the spots are being recognized and the info line is being displayed perhaps you have alerts from foreign countries disabled - check the various "Ignore spots from" settings displayed by the "DX/Packet Alerts" menu item.

1431. #logcall argument

Yahoo group: XMLog
Date: 2005-05-14 17:48:43 UTC
From: W3GERry
Topic: 1431 Message: 1431

I use XMLog to key my rig on CW through the serial port.

Today I observed that if I have the ADD window displayed, and though I've entered a call, a different call is sent by the #logcall argument in my send string.

Is this a problem, or a misunderstanding on my part of what's supposed to happen?

1434. Problem with online call lookups

Yahoo group: XMLog
Date: 2005-05-17 00:09:36 UTC
From: W3GERry
Topic: 1434 Message: 1434

This problem seems to be outside the XMLog program, but I wonder if anyone has seen it or has any ideas------

I run a home network, 3 machines (let's call them A, B, and C) on an Ethernet LAN with a router. All machines run Win98se

I usually run XMLog (4.96) on machine A. For the past few days, instead of looking up a callsign on line it gives me a box captioned QRZ.COM ERROR 11001 (host not found error), as shown in the screen capture in the attached Word document (which probably will be stripped off the copy to yahoogroups).

Yet if I run XMLog on machine B, callsign lookup works fine.

Machine A is fine in all other respects-- accesses the Internet and the LAN FB.

Any ideas?

W3GERry . . .
Sounds like the same problem I've had for several months, but it's fixed now. Here's my story. I first used XMlog maybe 6 months ago. Love the program, expecially the online address lookup. After about two months or so of flawless operation, it wouldn't (or couldn't) find the addresses any more. Got the "Operation Timed Out" window.

When I posted the problem on this forum, some had said they had the problem for a while, and then for no apparent reason, it did something really amazing, it cleared up on its own. That was exactly my story. I went through upgrades on XMlog, updated windows, etc, trying to find the bug, and to no avail. For several weeks (a couple or three months) I had to look up all the addresses manually on the QRZ website. (bummer!) One day about a week ago or so, IT WORKS! Right out of the clear blue, "IT WORKS!"

I too, run on a network, and XMlog is only on one of the machines. Just for information, all three (sometimes four) machines are hooked together through a hub, which is connected to a cable modem for our internet access. I run Windows 2K Pro. Our common demominator is a "network".

Sorry I can't help you any more than that, other than by saying it has happened to others, no-one seems to know the exact cause, but it seems to "cure" itself. Hang in there! If you find out anything, I'm sure everyone on the forum, including myself would be interested in what you find.

1436. New ADIF converter program for XMLog import from eQSL

Yahoo group: XMLog
Date: 2005-05-23 07:01:21 UTC
From: Dave Sergeant
Topic: 1436 Message: 1436

I use eQSL (as well as LOTW and paper QSLs).

At the moment eQSL lacks the facility of downloading the contents of your inbox in ADIF format, although there is a well hidden feature for downloading a rather limited ADIF version of your complete archive/inbox.

To solve that shortcoming, and allow me to easily add my new eQSLs into an XMLog log, I have written a short program to do the job. What I do is when checking my eQSL inbox, I select the text of the new QSO data and copy that into a text file (which is very easy to do with the 'copy to note' feature of the Opera browser I use). My program then converts the QSO data to ADIF for XMLog import.

I keep seperate log files as follows:
My main station log, which keeps track of paper QSLs received
A seperate log for LOTW confirmations, made from the LOTW QSLs received ADIF download.
A third log for eQSL confirmations, prepared as above.
At the moment XMLog does not keep track of which route confirmations have been received, so I like to keep the information in totally seperate logs.

There are already a number of ADIF conversion programs supplied in the XMLog suite. These are Quickbasic (which I don't have and I guess is not too common these days). My program is written in BBC Basic for WIndows (from http://www.rtrussell.co.uk/). If others are interested I could supply a compiled version of my program which would run on any Windows PC.

1438. PC crashing

Yahoo group: XMLog
Date: 2005-06-07 18:06:58 UTC
From: Steve Forst
Topic: 1438 Message: 1438

Hi all,

Been using xmlog on and off for a few years. On the latest version and also the previous version my computer crashes and restarts anytime I try to display the log or dxcc list.

If I try and display the log in any form (long, short or anything else), or display the dxcc list the pc reboots. Doesn't matter if I'm sending to screen or file, same result.

Windows XP home. After it restarts I get the Microsoft stuff about sending an error report. What's up? I can add QSO's to the log and also import contest logs with no problem.

It sounds like a hardware issue, most likely something
in the video. Have you updated the video driver?
Have you tried another computer? If you send an error
report, read the status when it's done and see what is
crashing.

Hi Mike,

Thanks for the help. The error report tells me that it is a device driver somewhere on the system. I had already tried updating the video driver, but willsee what else I can update. I guess I knew from the start it wasn't an xmlog problem, but since it only happens while using xmlog I thought I'd post here and see if there was a simple answer.

Tnx and 73 Steve KW3A

From: Craig Bradley
Topic: 1434 Message: 1441

I had this problem once. I run XMLog on a Win2K machine and one day
it stopped looking up calls on QRZ.com.

I rebooted the machine and power cycled my broadband router. That
seemed to fix it.

1442. Logging satellite contacts

Yahoo group: XMLog
Date: 2005-06-23 05:27:54 UTC
From: Craig Bradley
Topic: 1442 Message: 1442

Has anyone been using XMLog for satellite contacts? I have logged a few and have been logging the Rx frequency and putting the satellite name in the notes field. However, I cannot track WAS, Satellite this way.

Does anyone have any ideas on a better way to log these QSOs?

Tnx,
Craig, AE6RR

To answer my own question ... I just loaded 4.96 on a PII 350mhz win95 machine and it worked flawlessly ... thanks Mike for the update ... Grant

1446. Pledge Drive?

Yahoo group: XMLog
Date: 2005-06-23 15:22:11 UTC
From: Mike McAmis
Topic: 1446 Message: 1446

Hi, I've just received a some bad news. The company that has been hosting the XMLog web site at no cost all these years has decided to start charging for their services. I'm going to look around to find an inexpensive alternative but it's likely that I'll have to start spending some money to provide XMLog.

In order to help finance the web site and also pay for other costs I've encountered (and will encounter) developing XMLog I'm announcing the first annual XMLog Pledge Drive.

I'm asking for donations from anyone who has found XMLog to be useful. These donations will be used to support the web site and other costs incurred developing XMLog.

You can make donations via PayPal using m.mcamis@... or send a check to:

Michael McAmis
433 Hanover Center Road
Etna, NH - 03750

I know it's a lot to ask since ham radio operators tend to be very frugal (I know I am!!).

The XMLog web page has consistently provided 10,000+ downloads of the XMLog .zip file per year for nearly ten years and during that time I've received about 2-3 donations per year. How many of these downloads have resulted in actual XMLog users? I have no idea but we have about 380 users here on the XMLog group and I always assumed that there must be at least 10 other users out there for each one in the group...

Thanks, Mike - W1ECT

1450. [Is this Spam?] [XMLog] Re: Pledge Drive?

Yahoo group: XMLog
Date: 2005-06-24 15:26:15 UTC
From: Craig Bradley
Topic: 1449 Message: 1450

Hi Steve,

Sorry if this sounded like spam. I have been thinking about contributing for a while and Mike's message prompted me into action. Mike has provided me with great tech support via email on a couple of problems. I am a firm believer in paying for what I get. I would like to be sure that XMLog and Mike's support will be around for as long as I use the product. If Mike starts losing money on this, what is his incentive to keep spending time upgrading and providing tech support? I like to be paid for my services (and writing this message is not a service).

I am not affiliated with Mike or XMLog and I do not receive any financial compensation for writing this posting. My motivation is to see that Mike has the required financial support to continue his great efforts. I want to keep my installation of XMLog going. Mike has verified to me by email that he did receive the PayPal payment. I can provide a copy of the receipt email if there in any doubt that this is a legitimate payment.

73,
Craig, AE6RR

Hi !!

Let me say that I have used XMLog now for about 5-6 years, and sent Mike a small donation several years ago. Briefly, let me say this: Let's all cough up a few bucks to help pay for what we use (and NEED)! I for one believe that everybody who uses it, should show their appreciation to Mike by a contribution!!!!!!

Tnx fer a great program and your ongoing support, Mike !!
73 All, es Gud DX!!!

Hi Craig
How anyone could take your email as spam is beyond me. You simply stated that you sent the programmer some dollars because you find his program suitable to your needs. If the spam police want spam then I would happily give them my xtra.co.nz email account now that has spam.

Subject: [Is this Spam?] [XMLog] Re: Pledge Drive?

Hi Steve,

Sorry if this sounded like spam. I have been thinking about contributing for a while and Mike's message prompted me into action. Mike has provided me with great tech support via email on a couple of problems. I am a firm believer in paying for what I get. I would like to be sure that XMLog and Mike's support will be around for as long as I use the product. If Mike starts losing money on this, what is his incentive to keep spending time upgrading and providing tech support? I like to be paid for my services (and writing this message is not a service).

I am not affiliated with Mike or XMLog and I do not receive any financial compensation for writing this posting. My motivation is to see that Mike has the required financial support to continue his great efforts. I want to keep my installation of XMLog going. Mike has verified to me by email that he did receive the PayPal payment. I can provide a copy of the receipt email if there in any doubt that this is a legitimate payment.

73,
Craig, AE6RR

Hi All,

I'm new to XMLog and inputting log entries is fine - I'm just using it for data (packet) mode, not cluster work.
Problem is when I go to Awards and check WAS it's only showing two states worked although I have entered many more, it seems to have stuck at the first two states I logged. Maybe it's the way the data is entered?

From: David Spoelstra
Topic: 1461 Message: 1461

Hi! First off, thanks for such a great program.

Second, I'd like to ask for a small change in the way the program works.

I've got 18,000 QSOs in my log. I'm always moving the slider to the end
because I want to look at the most recent QSOs instead of the very first one
I did. Especially, after I add a few contacts, I like to look at them in
the log before I close the program.

I don't want a change in anything except initializing the slider bar to be
the most recent QSO instead of the first QSO when the main window opens.

What do you think?

Hi Mike,

What I'm trying to do is use a sound card interface to access a 2mtr packet cluster. AGW will support a sound card. I'm new to this packet stuff, and am having a little trouble sorting it all out. The reason for doing it this way is that it will be used on my sailboat. Space and power are conciderations. Since I use XMlog and the laptop already, it looks like a good way to go. There is a node in Mineville, NY that I can recieve good most places I sail on southern Lake Champlain.

Thanks,

Carl

OK Carl, I checked the AGW home page and I see that it can simulate a TNC using your sound card, sounds intriguing. I'll take a look at the documentation to see how much work it would be. I don't think that there's enough interest in VHF packet anymore to justify too much work here. Just about everyone around here has migrated to Internet connections or has an old TNC or two lying around (my old MFJ-1270 still paying it's dues here). If you decide to go the TNC route the old KPC-3 is a pretty small box and I think there are other non-commercial TNC's that are pretty tiny as well. Of course when you're traveling the fewer wires, the better.

1472. USB Serial port - CW & rig control

Yahoo group: XMLog
Date: 2005-09-27 11:14:00 UTC
From: Mark Marsden
Topic: 1472 Message: 1472

Hi Mike & XMLoggers

XMLog help files tell me that the same COM port cannot be used for both CW keying and Rig control.

My setup is a laptop (sans COM ports), a USB - serial adaptor, my homebrew CW/Voice keyer on http://granta.digital-crocus.com/Voice_Keyer.php3 and an FT1KMP. Writelog and N1MM logger use a single USB-Com port to provide rig control, PTT & CW keying.

Is it possible to make XMLog work on the same port?

Hi Mike,

Sort of. I have a 706IIG and a Signalink interface. I have no trouble recieving the packet, but due to a misconfiguration on the laptop no audio out so I haven't transmitted yet. The interface box is on the boat. I plan on getting it asap and working on the mobile setup in the van. (Same radio). I used RXClus 8.2 (http://rchalmas.users.ch/rxclus/) to recieve the packets. There is only a couple of programs that work with AWG.
Will you be at Hosstraders? I plan on being there Friday. If I can do anything to help you out let me know.

Topic: 1472 Message: 1474

Hi Mark, It's true that XMLog currently does not support CW and rig control on the same serial port. It's something I hope to address in the near future but I can't make any promises. I know there are adapters that provide multiple serial ports for a single USB port so I did a bit of web searching. There was a wide variety of prices and forms for these adapters and some of there are quite big and/or ugly and/or expensive. Here's one I found that looked promising:

http://www.usbgear.com/USBG-2X232.html

Maybe some other folk out there have had some experience with these adapters that they can pass on.

1477. XMLog Version 5

Yahoo group: XMLog
Date: 2005-10-06 15:25:37 UTC
From: Mike McAmis
Topic: 1477 Message: 1477

The current beta version of XMLog is available at www.xmlog.com/beta
and is approaching the point where it will become the "official"
XMLog version.

New features available in version 5 include:

Satellite Name/Mode and Contest In/Out fields have been added.

A new group of log fields, the Station Info fields, have been added.
These fields define the location of your station (country, grid,
zone, etc.) and the station and operator callsigns. These fields
are saved with each log entry and can be useful when the log
contains QSOs made by different operators or from multiple
locations. To set the default values for these fields use
the "Options/Station Info" menu item. For more info use the "Help"
button from the "Station Info" window.

By default these new fields are not displayed. To view these fields
choose the "Options/Log Fields" menu item and pick the "Log Fields"
tab.

The Power field now allows values less than 1 watt. However, only
log files created by version 5.02 or later will support this
feature. If you want to use fractional power values and you have a
log file that was created with an older version of XMLog you can
create a new log file that contains all your old log entries by
using the "File/Copy Log to..."
menu item.

The Log and Packet windows now include a "View" menu. The following
version 4.xx menu items were moved to this new menu:

Log Window:
Display/Show QSOs Window

Log and Packet Windows:
Options/Show Packet Window
Options/Show Packet Spots Map
Options/Show Packet Spots History

Packet Window:
Edit/Split Screen
Edit/Horizontal Scrollbar
Edit/Memory Buttons

A CW Keyboard window is now available. This window can be displayed
from the Log or Packet windows using the "View/Show CW Keyboard"

menu item.

The stand-alone keyboard program XCW is now bundled with XMLog and no longer needs to be downloaded or installed separately.

A "Keep Alive" feature for network connections is now available. This feature is used to avoid the disconnects issued by some networks when the connection has been idle for some time. To enable the "Keep Alive" feature Choose "Options/Packet Options" and pick the "Keep Alive" tab.

From: Craig Bradley
Topic: 1477 Message: 1478

Hi Mike,

Thanks for the run down on the new features. Don't forget the updating of the grid square and QSL manager info from QRZ.com. Also the new report features for 2, 4 & 6 digit grids, the 2 digit is great for the new CQ Field Award! Using this feature, I have found that I already have worked enough grids to qualify for the basic award, just by updating the fields and running a report.

Regarding the Station Info fields, is there some way to save a couple of defaults? I operate from 2 locations quite often and it would be handy to just recall QTH #1, QTH #2, etc. Also, is there some way to select all of the QSOs from one QTH only for awards such as WAS?

Thanks again for all of the great new features! I am using version 5.10 currently.

73,
- Craig, AE6RR

To: XMLog@yahoogroups.com
Subject: [XMLog] XMLog Version 5

The current beta version of XMLog is available at www.xmlog.com/beta and is approaching the point where it will become the "official" XMLog version.

New features available in version 5 include:

Satellite Name/Mode and Contest In/Out fields have been added.

A new group of log fields, the Station Info fields, have been added. These fields define the location of your station (country, grid, zone, etc.) and the station and operator callsigns. These fields are saved with each log entry and can be useful when the log contains QSOs made by different operators or from multiple locations. To set the default values for these fields use the "Options/Station Info" menu item. For more info use the "Help" button from the "Station Info" window.

By default these new fields are not displayed. To view these fields choose the "Options/Log Fields" menu item and pick the "Log Fields" tab.

The Power field now allows values less than 1 watt. However, only
log files created by version 5.02 or later will support this
feature. If you want to use fractional power values and you have a
log file that was created with an older version of XMLog you can
create a new log file that contains all your old log entries by
using the "File/Copy Log to..."
menu item.

The Log and Packet windows now include a "View" menu. The following
version 4.xx menu items were moved to this new menu:

Log Window:
Display/Show QSOs Window

Log and Packet Windows:
Options/Show Packet Window
Options/Show Packet Spots Map
Options/Show Packet Spots History

Packet Window:
Edit/Split Screen
Edit/Horizontal Scrollbar
Edit/Memory Buttons

A CW Keyboard window is now available. This window can be displayed
from the Log or Packet windows using the "View/Show CW Keyboard"
menu item.

The stand-alone keyboard program XCW is now bundled with XMLog and
no longer needs to be downloaded or installed separately.

A "Keep Alive" feature for network connections is now available.
This feature is used to avoid the disconnects issued by some
networks when the connection has been idle for some time. To enable
the "Keep Alive" feature Choose "Options/Packet Options" and pick
the "Keep Alive" tab.

1483. Can I do this??

Yahoo group: XMLog
Date: 2005-10-08 00:06:31 UTC
From: jfelts13
Topic: 1483 Message: 1483

Can I set XMLog up so if I want to see only contacts made by a FT-817, K2, or Rockmite it will show just those? How about only FT-817 at 1.0 watts, then 2.5 watt and so on? I was under the impression that I could from a article I read somewhere but dang if I can figure it out. But then again when it comes to puter stuff I'm pretty dense.

From: Gary Stone
Topic: 1483 Message: 1484

Hi Jerry,

Yes, you can. You can search any field. Take a look at the help files for all the wild card searching but it is farily easy. For example, if I want to search (something I just did tonight) for all qsos with Japan that I have recvd a qsl but not sent one I would search and put "JA" in the country and I would put "!" in the QSL Rcvd and "=" in the QSL sent. This would search for all JA dxcc qsos with anything in the QSL rcvd field and with nothing in the QSL sent field. (I found 120 qsos I wanted to buro send to my JA friends!).

And a trick to consider: There is no place for your rig that I know about; However, I too like to keep track of that. So, under the QSL Via field (one I don't use) I put my rig. So, I can easily search for the rig by searching for the right string (IC-746) in that field to find out how many qsos with my Icom 746.

Hope that helps. The search features are very powerful and useful. Look at all the wild cards in the help files. Click 'help' then 'display help' then 'using the log window' and then look for the section on searching the log.

Subject: [XMLog] XMLog Version 5

The current beta version of XMLog is available at www.xmlog.com/beta and is approaching the point where it will become the "official" XMLog version.

New features available in version 5 include:

Satellite Name/Mode and Contest In/Out fields have been added.

A new group of log fields, the Station Info fields, have been added. These fields define the location of your station (country, grid, zone, etc.) and the station and operator callsigns. These fields are saved with each log entry and can be useful when the log contains QSOs made by different operators or from multiple locations. To set the default values for these fields use the "Options/Station Info" menu item. For more info use the "Help" button from the "Station Info" window.

By default these new fields are not displayed. To view these fields choose the "Options/Log Fields" menu item and pick the "Log Fields" tab.

The Power field now allows values less than 1 watt. However, only log files created by version 5.02 or later will support this feature. If you want to use fractional power values and you have a log file that was created with an older version of XMLog you can create a new log file that contains all your old log entries by using the "File/Copy Log to..."

menu item.

The Log and Packet windows now include a "View" menu. The following
version 4.xx menu items were moved to this new menu:

Log Window:
Display/Show QSOs Window

Log and Packet Windows:
Options/Show Packet Window
Options/Show Packet Spots Map
Options/Show Packet Spots History

Packet Window:
Edit/Split Screen
Edit/Horizontal Scrollbar
Edit/Memory Buttons

A CW Keyboard window is now available. This window can be displayed
from the Log or Packet windows using the "View/Show CW Keyboard"
menu item.

The stand-alone keyboard program XCW is now bundled with XMLog and
no longer needs to be downloaded or installed separately.

A "Keep Alive" feature for network connections is now available.
This feature is used to avoid the disconnects issued by some
networks when the connection has been idle for some time. To enable
the "Keep Alive" feature Choose "Options/Packet Options" and pick
the "Keep Alive" tab.

Thanks Gary, I think I understand but I see I've got a lot of figuring out who, what, when stuff first. Reading the help files really has me confused. I fused, played, and got frustrated enough for one day. Finially figured I had to create New Log which I named, NR5A. Then you open Old Log and you can enter the QSO info. Then I guess after you enter everything your suppose to hit the Add button. I do that and everything I entered is lost. Tried several times to figure out how to view the log but found No Enteries or something along those lines. I'll work some more tomorrow with it. Why must this stuff be so hard?? hi

Thank for trying to help.

Jerry;
I can't understand why u say u have to close the program after logging. I keep my XMLog open all the time except of course when I reboot. I find the program so easy in fact that I have not even explored any other logging program except TR Log which I use when I go away and be dx, and also contesting. XMLog is not too good for those applications. But for day-to-day dx-ing and rag-chewing it is very easy to use and totally stable (zip crashes...knock wood). I use an older version (4.35) and do not see the need to download a newer version...since the one I use works perfectly. I am no computer whiz either. Are u using "edit...add new entry" for new Qs? Then when ur done u just hit "stop" button at the bottom and ur back into regular log-view mode agn. There are many other features I use such as "show packet window" ...then u can right click on any call and immediately see it's past history. Then it is easy to update LOTW thru it's export feature. But regardless of all that ur experience may be quite different than mine. I hope u can grasp the help files and then get into the logger and really see it is easy to use. Any questions u may have I will try and answer. If u want Jerry, I can give u my LL # and on the weekend (unlimited minutes) we can work on tutorials in real time...if u want...gl...73/dx

Hi There

I cant help with the article you read but I find XMlog excellent and very easy to use. I don't understand your comments about having to close the program after logging and then reopen it. Here I open my program and let it run for the duration of my operating cycle. I would log numerous contacts before closing down when I had finished operating for the day.

Prior to using XMlog I used Logger 32, a comprehensive and marvellous program but I found XMLog to be more suitable for my needs and have had no problems since moving to it 12 months ago.

Hi Jerry,

I'm not sure where you are running into problems with the program. I am totally blind and use it for its ease of use and, it is one of the only logging programs that works well with speech output. I leave my program open 24-7 and never have a problem. About the only time it goes off is when I have to reboot the computer.

Basically, once you set up the parameters, press control-A to enter a contact, put in the information, then press control-A again and Control-O to save it. Those are the keyboard commands I use. There are probably mouse clicks that accomplish the same thing but I don't know what they are since I don't use the mouse.

Good luck and keep at it. It's a good, full featured program and once you have the hang of it, very easy to use.

Take care and very 73.

Kevin :)

1492. What I do, and another question.

Yahoo group: XMLog
Date: 2005-10-10 02:43:45 UTC
From: jfelts13
Topic: 1492 Message: 1492

Wow, I've never had this kind of trouble. From what I read this program will track stuff several different ways. Like by how much power your run, say 5 watts, 2.5 watts etc. I've even had it explained how to keep track of what contacts you made on say your K2, Ft-817, which is what I want to do. I don't understand why you can give me a circuit diagram of say a transmitter and the parts and I can build it and it usually works the first time, I can troubleshoot it and get it working. Yet, programing anything I can't do. My XYL has to program VCR's and the like, I can't do it. hi hi hi

Right now I'm having about a 40% success rate of logging contacts. slowly figuring it out. The more I play the more I learn, and the more frustrated I get. hi But I refuse to give up. You guys may have to kick me off the list because your getting tired of me. hi

I'll try to explain what I'm doing, maybe some one will catch what I'm doing. then ask another question. I spent about an hour on the question trying to figure it out.

First off, puter is turned off when not using it, so first thing is boot up puter. My Desktop appears, then I click on the ZMLOG Icon which of course brings up the program. 2. Click on FILE then "Open Old Log" which happens to be NR5A.LOG . 3. Click EDIT and "Add New Entry". 4. I follow all the promps and enter info. 5. Last I click on "ADD". How ever to make another entry I have to close it, reopen it. It does not do it on its own for next entry.

About half the time now it saves it, and I can bring the log up by Clicking Display and Display Long. Most of the time now that gives me the log. Hey I'm getting better at it.

Last question, what I want to figure out now is how do I see how many states I've worked on say 17m? I can manage to bring up total WAS worked, but I want to see how many states I have worked on say just one band. I enter the frequency as say 10118 for 30m and 18086 for 17m.

Ok I'll try to keep it bite size and one thing at a time from now on. I'll reread you guys comments again, and problably go thru the help files once more tonite.

Thanks for putting up with me, it may take some personal lessons on the telephone, I have free LD after 8pm and weekends also. LOL

I appriciate the help and one way or the other I'm going to figure this out because I'm hard headed.

Jerry;
Gotta go to bed now but just one comment b4 I do. Something is wrong with the program because that is not the way it works. As soon as u hit "add" the fields should blank to zero (nothing) and u shud be ready for another entry...something wrong. Time to either reload the program or talk to Mike w1ect I think. His email is m.mcamis@....

From: Mike McAmis
Topic: 1492 Message: 1494

Hi Jerry, Here's the sequence of things you need to do to add
entries - these steps haven't changed from version-to-version:

-Type Ctrl+A (or use "Edit/Add New Entry").

- Fill in the fields

- Select the "Add" button, not the "Stop" button

At this point you are still in "Add" mode and you can:

- Fill in the next log entry and select "Add" to add it

...or...

- Select "Stop" to get out of "Add" mode

Selecting "Stop" rather than "Add" when you have some data showing
will cause that data to be discarded.

I find that it's good to back up layout.mdb and labels.ini (and *.log and mlog.ini).

Hi Mike,

Thanks for suggestion, they don't show up in Awards/WAS/checklist. The State abbreviation is OK and prefix set to W. Further checking reveals that W9DA, with all the right info has turned up in the NC State slot, instead of IL?! And I can't get rid or move it? Maybe I should unistall and re-install program?

Hi Peter,

I tried W9DA (I have the option to set the fields from QRZ.com setup) and the QSO was filled in with IL as the state. I was able to click Modify and change it to another state OK. Maybe you should try to start another log file and put this QSO in to see if your log file is corrupted?

Mike may have some better ideas though...

1502. Internet Log On

Yahoo group: XMLog
Date: 2005-10-12 02:48:33 UTC
From: w1iko
Topic: 1502 Message: 1502

Just started using XMLOG - Version 5.12... All seems to work except not being able to set up an auto log in using my call.
I use k1ttt.net (internet connection) I get connected but I need to type my call in to complete the connection. There must be a way to automate this function - I haven't found it. Any one have a cure ?

Also noted when logging in a station I need to pick the country from a list - is it not possible to have XMLOG fill in the country automaticly ?

thanks for reading this,
W1IKO

Topic: 1502 Message: 1503

Check the help file section on "Automatic Node Connections".
Scripts can be created as text files with a file extension of .nod
and run using the "Connect/Start Node File" (F5) menu item. This
node file can be run automatically when the Packet Window is shown
by using the "Options/Packet Options" menu item, selecting
the "Port" tab and then filling in "Node File Name".

A typical node file for K1TTT might be:

```
connect www.k1ttt.net
match call:
send #me
match #me de K1TTT
set/page 0
send dir/new
```

I have setup my version to lookup the stations info in QRZ.com in the Options/Callbook Setup Menu. When I log a QSO, XMLog looks up the call and fills in almost everything, including the QSL manager and Grid (version 5.11).

I will have to try the automating of the login also.

1507. importing ADIF files

Yahoo group: XMLog
Date: 2005-10-25 20:15:16 UTC
From: Robert Dixon
Topic: 1507 Message: 1507

Have been able to change a smaller log file to an ADIF file by going to IMPORT on the tool bar. This creates a LOG.adi file that can be imported into another, bigger, file. By accident I put in some WAE CW contest entries as 13/08/06 in the small file. Went back and modified the files so that they read 13/08/05, then changed the log file to an ADIF file and added it to the MASTER LOG file. Both the 13/08/05 and 13/08/06 entries went into the larger file. Opened up the LOG.adi file and there they were in the EXCEL workbook!. I was able to delete the incorrect entries in the LOG.adi file.
Suggestion: If you are going to periodically update a larger file by importing entries from a smaller file delete the old ADIF file for the smaller file and create a new one. Then import it to the larger file.

BTW: I have almost 17,000 entries in my MASTER LOG. This logging program is the neatest thing since somebody invented the wheel!

1508. Re: importing ADIF files

Yahoo group: XMLog
Date: 2005-10-26 17:32:51 UTC
From: Mike McAmis
Topic: 1507 Message: 1508

Hi Bob - When importing an ADIF file all the entries in the file will be added to your log unless they are "dupes". An entry is considered a dupe if the call/date/mode matches an existing log entry. In the case of dupes you have the option of keeping the existing log entry or having the imported entry replace the existing entry.

If you change the dates in the ADIF file so that they don't match the corresponding entries already in the log these entries won't be considered dupes and so they will be added to the log.

You have a couple of strategies that might help you accomplish what you wanted.

1) You could have changed the dates in the log file to match the edited dates in the ADIF file. This task can be simplified if you can select the entries by doing a search by date (without including any 'good' entries). At this point you can use the "Edit/Change Date for Multiple Entries" to change the date for all the selected entries.

2) Before doing the import you could have deleted the entries in the log that corresponed to the entries with changed dates in the ADIF file. Again, this could be can be simplified if you can select the entries to be deleted by doing a search by date (without including any 'good' entries). At this point you can use the "Edit/Delete Selected Entries".

In short, XMLog is always going to import the entries in the ADIF file unless they are considered to be dupes...

Mike - W1ECT

> Have been able to change a smaller log file to an ADIF file by going to IMPORT on the tool bar. This creates a LOG.adi file that can be imported into another, bigger, file. Do I take it that only the date, and not the time, is taken into consideration when determining whether it is a dupe? If so, I can see genuine QSOS, such as working the same station in the morning and later in the day (2 real QSOs) being considered dupes and only one being entered. Although I like the convenience of it working out which are dupes, I feel it would be better if it prompted me for the action required on a dupe rather than just saying '6 QSOs duplicate QSOs not added'. Or maybe I have not read the rules for setting the options in detail...

I get this every time I import a set of QSLs from LOTW into my seperate LOTW QSL log, which seems to repeat the QSOs received on the last day of my previous LOTW QSL download.

1510. Version 5.13 - QSOs and Check Call/Prefix windows

Yahoo group: XMLog
Date: 2005-10-26 21:59:20 UTC
From: Mike McAmis
Topic: 1510 Message: 1510

Hi - I've just posted version 5.13 at www.xmlog.com/beta. The main change in this version is to combine the features of the "QSOs Window" and the "Check Call/Prefix Window" into a single window. This window is displayed with "View/Show QSOs and Check Call Window" (F4).

I'm interested in getting some feedback from users of the old QSOs and Check Call windows.

Mike - W1ECT

1511. Re: Importing ADIF files - What's a dupe?

Hi Dave, Good point - I wnet back and checked and I see that the time is also checked, so it's actually call/date/time/mode.

I think LOTW has some kind of "only provide info for new QSOS since last time" feature, but it's been a while since I played with LOTW.

Hi Mike,

Well, it sounded very interesting. I downloaded it and got many, many errors and could not run the program. I then went back an installed an older version and all my setup stuff was lost. I did not back it up right before trying the beta - I know you say to do that and I will next time! Thanks Mike. I don't know what happened with this beta but it did not work for me. I have a back up at my office and will try tomorrow to get back where I was before this install.

Hi Gary,

I have had problems installing the newer versions on a Windows 2000 Pro machine, never could get it to run, but the old versions like 4.79 installed OK. I have been installing on a XP machine and then copying the files over to my Win2K laptop via the network. A bit of a pain, but workable. It sounds like a Windows 2000 problem. What operating system are you using?

Mike,

I installed 5.13 (using the procedure above) and it runs great on both machines. I REALLY LIKE the new QSOs/Call Check window!

I did notice that on the windows Options menu the Show Name & Show QTH selections were grayed out after deselecting Show QSOs List and then selecting Show All. If you then de-select Show QSOs List and re-select it, you get the selections back (not grayed out). Minor nit, but I have done some software testing in my time. Other than that, I have not been able to break it.

One thing that would really be frosting on the cake now would be to add the current frequency (from the rig) and the time to the "Note" displayed in the Packet window. That would allow you to return to a "found" station by just clicking on the frequency...

Great work Mike, this is really a first class program and getting better every day!

From: Craig Bradley
Topic: 1507 Message: 1514

I have found that LOTW checks the time down to the seconds. I have
downloaded QSOs from Writelog and also XMLog (imported from Writelog) into
LOTW by mistake. The Writelog files had the seconds truncated or rounded
to zeros (I don't remember which) and LOTW listed both QSOs with the time
difference of only seconds. Once you do this, you cannot remove the dupes
form LOTW (I asked), but it doesn't seem to hurt anything.

My experience with LOTW is slightly different. I normally upload a batch of QSOs the morning after a major contest, and check for new QSLs immediately afterwards. Since others are doing the same there are normally a few confirmations available for those QSOs. Next time I go into LOTW I check for QSLs received after the last time I logged in. Because LOTW records when I last visited only by date and not time it will include all QSLs received ON the last day I visited, which will of course include both those I previously downloaded and others received later that day.

Of course this is not a problem, they really are dupes. And not an XMLog problem, which works absolutely fine with LOTW.

Hello Mike

I have installed and tried ver 5.13. I like the new combined window, thank you for adding it.

I was previously a Logger 32 user but discovered XMLog about a year ago. It suits my purposes better than L32 and I have been using it since October 2004. I think it is a marvellous program. Keep up the good work.

Hi - I've just posted version 5.13 at www.xmlog.com/beta. The main change in this version is to combine the features of the "QSOs Window" and the "Check Call/Prefix Window" into a single window. This window is displayed with "View/Show QSOs and Check Call Window" (F4).

I'm interested in getting some feedback from users of the old QSOs and Check Call windows.

Mike - W1ECT

Hi Gary,

I didn't have any problems with the installation on the XP machine. I did install over version 5.12 after backing up the entire directory. Perhaps Mike can help you with the install, but I am sure that he will need more details regarding the exact error messages that you got on the install. I would recommend backing up your directory by copying the whole thing in to another directory, download version 5.13 again and try another install with paper and pencil handy. It is worth the effort as the new window is really nice. One other feature of the new window is that if you search for a QSO, when it is displayed in the QSO window, the new window will display the QSO info plus the DXCC status.

Good luck.

From: Craig Bradley
Topic: 1510 Message: 1519

Mike,

I am using the new window today and I have a couple of suggestions.

1. As the Help drop down menu on the QSOs/Call Check Window does the same thing as the help button, replace the Help button with a "Start QSO" button, this would be very handy.

2. A Clear (entry field) button would be more useful to me than the Close button as you can close the window with the X in the upper right corner. I never want to close this window anyway as is it great!

Thanks again for this feature!

73,
- Craig, AE6RR

Mike -

In my humble opinion this is the best change that you have made! It
really adds to an already great program.

Thanks a million!

Mike -

After playing with the new window for a bit, I agree with Craig AE6RR
about a CLEAR button being more useful
than the CLOSE. Also, would it be feasible to append the State/Province
to the QTH field?

On an entirely different matter, do I need to make my posts to
XMLog@yahoogroups.com in fixed width font, or can
I use my normal gaudy, offensive variable width font?

From: Howard Baker
Topic: 1523 Message: 1523

Would it be a lot of trouble to have the call highlighted when you f4 a call so you could type in another call. Make it similiar to the call book lookup. As it is you must backspace to put in another call. This is just a suggestion not a criticism.

1525. Vers. 5.13 problem

Yahoo group: XMLog
Date: 2005-10-28 12:00:07 UTC
From: ab1dd
Topic: 1525 Message: 1525

Hi Moke,

Got a possible problem with the new beta. New install on xp. Old log, I copied the log from my working PC. When I open the QSO+ check call window, select show call/prefix info window, I get a "runtime error '9': Subscript error out of range". Hit OK, everything closes. This only happens when a callsign is in the Call/Prefix box, ether by selecting a log entry or typing one in directly. It errors out after the first character is typed in. I also tried it with a new log, empty, and the same thing happens as soon as I type a character in the box. When I uncheck the Show Call/Prefix Info, everything seems to work good.
I like the new feature, hope we can make it work.

1527. Log question

Yahoo group: XMLog
Date: 2005-10-30 02:30:02 UTC
From: Bill Turini
Topic: 1527 Message: 1527

Pardon me if this has come up before, but I can't even come up with a subject for this post, let alone search the archives for a solution.

I have been using XMLog for a while now, and imported my past logs into it. In the process I moved. So now my log has contacts from 3 old QTHs and my current one.

Is there some was I can just count all the award data from a certain date, or would it be better to export my log, delete the entries from my previous QTHs and rebuild the log? In retrospect, I guess I should have created a log for each QTH, right?

Any help would be appreciated.

Thanks

Bill KA4GAV

Yahoo group: XMLog
Date: 2005-10-30 13:49:51 UTC
From: Mike McAmis
Topic: 1527 Message: 1528

Hi Bill - When you generate reports using the "Display" or "Awards" menu items you will receive a prompt asking which log entries you'd like to include in the report: all log entries, or the "currently selected" log entries. This means that you can do a log search by QSO date to select to log entries you want to include in the report and then answer "currently selected" when you get the prompt.

Check the "Searching the Log" section of the help file to see how you can provide date ranges when you select log entries.

The next version of XMLog will provide new fields for log entries that allow you to save info about your station location and station operator which will make selecting the appropriate entries easier than having to specify date ranges.

1529. QSOs Window fixes and new features

Yahoo group: XMLog
Date: 2005-10-30 16:02:10 UTC
From: Mike McAmis
Topic: 1529 Message: 1529

I've just posted XMLog version 5.14 at www.xmlog.com/beta

This version should fix the subscript errors some users were seeing when using the QSOs Window.

You can now update the QSOs Window by single-clicking on a callsign in the Packet Window (a double-click still does a callbook lookup).

Ctrl+W can now be used to clear the Callsign prompt. (Ctrl+W is also used to clear the input line in the Packet Window).

1536. ADIF transfer

Yahoo group: XMLog
Date: 2005-11-09 01:40:40 UTC
From: Robert Dixon
Topic: 1536 Message: 1536

Using V4.96 was able to export a smaller log into a master log by changing to an ADIF file and then importing into the master log. Am now using V5.11 and end up with split screen when I try to import to master log. Split screen has info regarding my call, grid square, longitude, latitude, etc. Only way I can import ADIF files to master log is to reload V4.96, import and then change the log to V5.11. Have checked the website and still can't figure it out. What am I missing?

Hi Ray,

Try selecting the Options menu, then Log Fields, Fonts, Default File...
Then the Log Fields tab at the top. You can turn off the Awards Tracking
Fields here. Also, you can click the "Show" button at the bottom of the Log
window to alternate between the different fields.

I hope this helps.

1543. Rig response too short

Yahoo group: XMLog
Date: 2005-11-15 05:35:26 UTC
From: mefazamy
Topic: 1543 Message: 1543

Installed 4.96 on a new computer. (Used earlier version on an old computer with fb results.) Keep on getting get freq/mode too short. Received 3 expected 38.

Did the rigdebug feature. This is what I got.
freq/mode hex 49 46 3b
response 000. 49 46 3b
000. 073 070 059

Am using TS140. Of course no more serial ports on these new computers. Using usb to serial adapter. Installed driver.
What can I do to get it working.

Thanks,
Evan KB2AMY

Topic: 1543 Message: 1545

I have the same problem. When I select Add New Entry, I get the message. Then if I click "Clear" on the QSO window, it gets it right. Then everything works OK. This happens every time I start XMLog. I suspect that the serial port in the computer is not cleared or has some "garbage" in the buffer. I have found that clicking on a packet window spot has similar results, no error message but it doesn't work the first time. The second time, the rig tunes to the packet spot frequency.

I am using the Kenwood TS-2000 mode with a Kenwood TS-2000. The same problem happens with my TS-480. The computer is running Windows 2000 SP-4. I think that it is related to the operating system.

Sometimes the message is: "Bad format in rig Get Freq/Mode response 'E;IF00014245000 -0020000074020000390;'.

I have talked to Mike about this, but we never resolved it. Someday when I get some spare time, I plan to monitor the characters on the serial line.

1546. Re: XMLog with OR 2800 Rotor

Yahoo group: XMLog
Date: 2005-11-15 16:46:00 UTC
From: Mike McAmis
Topic: 1541 Message: 1546

Hi Ted, Based on the documentation you sent me, here are the commands
that XMLog sends to the OR 2800:

S (+ cr to kill any operation in progress)
(pause one second)
123 (+ cr to move to 123 degrees, etc.)

If you find that other commands are required, let me know.

Mike - W1ECT

1547. Re: Rig response too short

Yahoo group: XMLog
Date: 2005-11-15 16:56:59 UTC
From: Mike McAmis
Topic: 1543 Message: 1547

Hi Ken, I can't tell you what's going on but I can tell you what's handled differently with when using "TS-2000" as the rig type. XMLog normally sets the mode and then the frequency which worked fine for many years. Then rigs came along that had some memory features so that when you set the frequency this might also set the mode, which would supercede whatever XMLog had just set. So as I discovered rigs in this category (the TS-2000 is one) I reversed the order that the rig control commands are sent (set frequency, then set mode). I suppose I could have just arbitrarily reversed the order for all rigs but I didn't want to take the chance that this would cause problems with rigs that worked ok using the old scheme.

How does this affect what you're seeing? If you figure it out, let me know...

Mike - W1ECT

> Solved the problem. Changed model from Kenwood to Kenwood 2000.
> It works. Why? Would like an explanation.

Hi Mike,

Many Thanks for the reply.
Gee, I don't recall sending you the docs
for the OR 2800 but at my age that isn't unusual... Hi.
In reading the docs I see that there may be one additional
command needed.
A (+ cr to put the rotor into "Azimuth" mode).

If you like I could copy all the info and send it to you
via the US Mail...

Many Thanks in advance for your help and support.

73, Ted K2QMF

1549. LoTW Confirmations

Yahoo group: XMLog
Date: 2005-11-17 04:16:21 UTC
From: Craig Bradley
Topic: 1549 Message: 1549

Hi Mike,

I have some QSOs that are confirmed on LoTW and I would like to mark them as confirmed for DXCC on XMLog. However, I would like to note that these are LoTW and not QSL cards so that I will not spend hours looking for the cards are some future date.

Currently XMLog only accepts the date or '?' in the QSL Rcvd field. Would it be possible to allow "LoTW" to be entered in some future version?

Or, is there a better way to do this?

Thanks and 73,

- Craig, AE6RR

1550. Re: [XMLog] LoTW Confirmations

That would be nice.

For the present, I enter LoTW confirmations as being received 01/01/50.
Since I wasn't licensed in 1950 there's no possibility of ambiguity.

I also would like to see something like "X" as a possible entry in QSO date
fields, indicating "I do not wish to QSL this station, and I do not care
about receiving a QSL from this station". Then they couldn't show up as
outstranding.

1551. QTH field and State/Province field oddity

Yahoo group: XMLog
Date: 2005-11-18 15:28:55 UTC
From: kd6na
Topic: 1551 Message: 1551

I have a qso in xmlog where I filled in the QTH field as "at the Washington Monument D.C." (It was a satellite contact with W3AFE who was portable). I did not fill in the State/Province field. Then I noticed when I looked at the WAS checklist for my satellite contacts, it had WA worked. I knew I was missing WA so I tracked it down to this QSO. Apparently xmlog tries to get clever and fills in the state based on info from the QTH field. If I explicitly fill in MD in the State field it is OK. If I try to blank out the State field after that, it automatically puts in WA!

Hi Jim, Yes - XMLog does try to intuit the state from the QTH field if you don't fill it in. The "D.C." should take priorty in this case but even if I fix this there are still other cases where this scheme can screw up - like if you put in a county name that's the same as a state name, etc.

Topic: 1541 Message: 1553

Hi Ted, One thing you could try is talking to your rotor by hand using the packet window, here's how. 1) Set your rotor config so that no rotor is configured. 2) Set your packet window port config to have settings appropriate to your rotor, set the port type to "comm port", and set the baud rate, flow control, etc. 3) Open the packet window and anything you type should be sent to the rotor and any response it makes should be displayed.

From: Joseph Agius
Topic: 1549 Message: 1555

I use the notes field for all of these type of indications. Every import I make from a contest is marked in the notes field as contest name, date, file of origin. You can be very clever with shortcuts. I can then search for the total of contest entries by contest. You can apply the same principle to LOTW.

There is usually ample room for all kinds of keys and key words. Howeverer if I need more room, I will add more of the info to address line 5.

It's then easy to search for what you want using many of the wildcard searches available in MLOG.

Hi Mike,

I tried what you suggested and it worked great!!!
I found out what the problem is.
Seems that M2 changed to command to control the rotor...
You have to send an "A" with the heading number in order for
the rotor to turn!!

A90 + cr will turn the rotor to 90 degrees...
Just entering 90 + cr will do nothing..
The "A" stands for azimuth...

Can you help with this?

Thanks in advance.

1557. ADIF import problem

Yahoo group: XMLog
Date: 2005-11-21 22:55:52 UTC
From: kd8biz
Topic: 1557 Message: 1557

I have some QSO's in another logger which I exported as ADIF
(DxKeeper, but does it matter?).

Examining the ADIF files it seems to have QSL sent, QSL received, etc
OK, also dates for QSL sent and received -

On import to XMLog, a lot of stuff has "?" for QSL received and I seem
to have magically achieved WAS when I really only had 28 confirmed - I
think everything that was marked as QSL sent in DxKeeper has now
become confirmed in XMLog.

Any ideas? I'd like to try to convert to XMLog, but only if I can
import an ADIF.

Yes-- but without an entry in the QSL RECD field XMLog's awards trackers
will show it as outstanding.

1561. Re: ADIF import problem

Yahoo group: XMLog
Date: 2005-11-24 15:58:29 UTC
From: Mike McAmis
Topic: 1557 Message: 1561

OK, I've checked the ADIF file created by DXKeeper you sent me and I have a few comments about the QSL dates. But first, there are a couple of problems in the file where fields are not following the ADIF format.

1) The MY_LAT and MY_LONG are specified as +/- values rather than a value preceded N/S or E/W.

2) The ADDRESS field is a multiple line field. These fields appear as more than one line in the ADIF file and the field specifier is supposed to contain a ":M" to flag it as a multi-line field. For example <ADDRESS:50:M>Whatever... rather than <ADDRESS:50>Whatever... (where 50 is the number of characters in the field, including the carriage returns that break up the lines). The result is that XMLog is only importing the first line of the address.

As far as the QSL dates go, here's the story.

1) ADIF has fields QSL_SENT and QSL_RCVD that have values of Y or N. These fields let you know if you've sent or received a QSL. There are also fields QSLSDATE and QSLRDATE that specify the associated sent/received dates. If a QSL_SENT appears with a Y and there is no associated QSLSDATE XMLog fills in the field with a ?. The same strategy is used for QSL_RCVD and QSLRDATE.

2) DXKeeper seems to maintain LOTW QSL info in private fields named APP_DXKeeper_LotW_QSL_RCVD, APP_DXKeeper_LotW_QSL_SENT, APP_DXKeeper_LotW_QSLSDATE, and APP_DXKeeper_LotW_QSLRDATE. It also maintains similar fields for eQSL info.

XMLog seems to be handling the "normal" QSL info fields OK and the LOTW and EQSL fields get ignored. If you seem to have QSOs that get imported with a QSL received date set when it shouldn't be you need to locate that entry in the ADIF file and check the QSL info fields. If you find an entry that has no QSL received info (QSL_RCVD or QSLRDATE) but gets imported with the date set (to a date or to ?) let me know. If the info is set in the file and shouldn't be that's a matter that you need to take up with the author of DXKeeper (perhaps the LOTW/EQSL settings are affecting the "normal" settings somehow?).

>>>That's not correct, Mike. Both the ADIF-1 and ADIF-2
specifications describe the data type indicator as optional. See the
Physical Specifications sections of both
http://www.hosenose.com/adif/adif.html and
http://www.adif.org/adif216.htm . Its not reasonable to truncate a
multiline field because its missing the optional data type
indicator. One can accurately parse a multiline field without the
hint that it contains newline characters.

1564. Re: ADIF import problem

Yahoo group: XMLog
Date: 2005-11-28 21:50:46 UTC
From: Mike McAmis
Topic: 1557 Message: 1564

Hi Dave, OK on the "M" specifier being optional for ADIF address fields (or for any multi-line field). I've made the change to handle this properly and I'll post it at www.xmlog.com/beta this week. While I was making these changes I also discovered a bug in the "muli-line" handling when lines in the ADIF file are delimited by a cr+lf rather than just a cr. The DXKeeper file you sent me is the first one I've seen that uses this scheme and the reason it matters is that strangely enough the character count for multi-line fields includes the end-of-line characters.

In regards to the WAS totals you can also use the Awards/WAS/Checklist and Submission Tracking reports to find examples of QSOs that shouldn't be credited. If you find an example that is improperly credited based on the values in the ADIF file please let me know.

1566. XML Packet Logon & 2 digit grids

Yahoo group: XMLog
Date: 2005-11-29 16:54:18 UTC
From: Craig Bradley
Topic: 1566 Message: 1566

Hi Mike,

I am using dxc-us.ab5k.net for the packet window and I have the "Keep Alive" enabled and set for 5 minutes. The command field is blank. I occasionally get "bumped off", but sometimes it runs for over 20 hours.

This is not a big problem, but when reconnecting, to use the default connection setting, you need to close the window and reopen it. Then you lose the "active" spots. If you use the Connect/Internet Connect menu, you have to type in the address. Would it be a simple thing to put the default login address in the Internet Connect window in some future version?

A second very minor nit: The Grid field will not accept a 2 digit grid field (or CQ Field Square), it requires a 4 or 6 digit entry. For some DX stations, it is hard to determine the 4 digit grid (some times hard to figure out the 2 digit). The CQ award only requires the 2 digit designator. Thanks again for adding the 2 digit grid setting on the Awards/Grids report. This has been very useful.

Any more thoughts on LoTW support?

Keep up the good work!

73,
- Craig, AE6RR

Topic: 1566 Message: 1567

Hi Craig, Filling in the default address for the "Connect/Internet Connect" prompt sounds like a good idea, I'll add it in the next version. Until then you can use a node file instead, the node file selector does have a memory and you can just hit F5 to get it going. Here's a sample file that's saved as W1GQ.NOD in my XMLog install folder:

```
rem
rem Internet AR-PacketCluster at W1GQ
rem
connect dx.w1gq.net
match call:
send #me
match #me de W1GQ
send set/filters k,ve/pass
send set/page 0
send dir/new
```

The file can be invoked with the "Connect/Start Node File" (F5) menu item and it will also be invoked automatically when the Packet Window starts if you fill in the node file name as the auto-connect address from the Packet Port config window.

I added support for 2 digit grids in version 5.10 and Awards/Grids allows you to create reports based on 2, 4, or 6 character grid values.

From: Craig Bradley
Topic: 1566 Message: 1568

Hi Mike,

Thanks, that would be a nice feature. Thanks for the info on the node file also.

I am using version 5.14 and the 2 character grid reports for my CQ Field Award tracking. However, the QSO window will not accept a 2 character grid, it complains and says that the grid format must be XX## or XX##YY. Some foreign QTHs are hard to locate on a grid map and some countries have multiple field squares (2 character grids).

73,
- Craig, AE6RR

Subject: [XMLog] Re: XML Packet Logon & 2 digit grids

Hi Craig, Filling in the default address for the "Connect/Internet Connect" prompt sounds like a good idea, I'll add it in the next version. Until then you can use a node file instead, the node file selector does have a memory and you can just hit F5 to get it going. Here's a sample file that's saved as W1GQ.NOD in my XMLog install folder:

```
rem
rem Internet AR-PacketCluster at W1GQ
rem
connect dx.w1gq.net
match call:
send #me
match #me de W1GQ
send set/filters k,ve/pass
send set/page 0
send dir/new
```

The file can be invoked with the "Connect/Start Node File" (F5) menu item and it will also be invoked automatically when the Packet Window starts if you fill in the node file name as the auto-connect address from the Packet Port config window.

I added support for 2 digit grids in version 5.10 and Awards/Grids allows you to create reports based on 2, 4, or 6 character grid values.

Thanks Mike,

I will check it out. I am sure that this was just a carry over from the 4 or 6 digit grids. The program was checking for legal grids and at that time no one cared about the 2 digit grids. Since CQ started the Field Award, 2 digit grid are useful.

1573. Converting XMLog logs to ADIF or other formats

Yahoo group: XMLog
Date: 2005-12-07 17:46:25 UTC
From: Hadi Teichmann
Topic: 1573 Message: 1573

Hi:

Is there a possibility to convert the XMLog log format to other formats, preferably ADIF? I'd like to use my old (and perfect) label program (which does not accept XMLog's log format). Can't find anything about this sort of export in the help file.

73 Hadi DJ2PJ OH?JWH

1575. Re: Converting XMLog logs to ADIF or other formats

Yahoo group: XMLog
Date: 2005-12-07 20:35:21 UTC
From: Mike McAmis
Topic: 1573 Message: 1575

Hi Hadi, XMLog supports import and export of ADIF files. Use the Import menu item from the Log Window. If you can't find any ADIF info in the help file you must have a very old version of XMLog. Check www.xmlog.com and www.xmlog.com/beta for the most recent versions.

Mike - W1ECT

Hello Mike:

Thanks for your very prompt reply.

I had a very old version indeed, and have loaded the newest one right
after reading your mail. No problem with ADIF-exports anymore, I guess.
My old label-program works perfectly with the new imported ADIF-file.

I am extremely grateful for your help.

See you down the log, Mike!

Topic: 1577 Message: 1578

Hi Ed, I assume you're asking about setting the "Station Info" fields for existing entries? (Station Info fields are only available in version 5 of XMLog at www.xmlog.com/beta). XMLog does allow you to set Station Info values for multiple entries. Hopefully you can isolate large subsets of your log that should get the same values by doing searches with a date range, for example to select all QSOs in 2004 you would use a search key of >=1/1/04,<=12/31/04 After doing the search you should use the "Edit/Change Station Info For Mulitiple Entries" menu item, pick the "Set Currently Selected Entries" option, and then fill in the values you want set for all the currently selected entries.

Of course before making major changes like this it's a good idea to back up your log file first.

From: Dennis Jacobson
Topic: 1579 Message: 1579

Hello all and the XMLOG just keeps getting better and better..
Thanks Mike.

As my Christmas wish, I wish I could right click on a call in the packet window and get the View/show QSO's/Check Call window information already plugged into the window. Rather than having to F4 and then type in the call. It would be one of the options along with those already listed when you right click on a call in the packet window.

It's just a wish but I hope I explained it clearly enough to make some sense.

Hope you all have a great holiday season

Thanks and 73

1580. Re: LoTW Confirmations

Yahoo group: XMLog
Date: 2005-12-09 16:32:25 UTC
From: ad5uu
Topic: 1549 Message: 1580

I use these fields in the same manor. The problem is they are filled with 10-10, Fist, Contest, EQSL, LOTW, and all the subs that go with those.
LOTW would be a good choice to add, because in 2006 WAS will be added to LOTW and you are supposed to be able to combine Paper and Lotw for the award. Thus you won't be in the ,originals poster's, position of looking for paper. (eqsl is not worth it).

Although, being that this excellent program is donated, I'll live with what I Have.

NO COMPLAINTS FROM MY END!!!!!!!

Thank you
AD5UU

Hi Dennis - Try this, open the info window with F4 (or the menu item) and then click on the call(s) in the packet window.

I should probably add a "Open QSO/Check Call Window for xxx" menu item to the list of things you can do when you right click on a callsign in the packet window.

1583. DXCC Report

Yahoo group: XMLog
Date: 2005-12-15 19:38:40 UTC
From: abba_houston
Topic: 1583 Message: 1583

I want to prepare a set of printed reports for my first DXCC Submission. I have entered in all of my QSLs many QSOs into XMLog and would like to print out a listing by band/mode so that I can then use that info to create the proper ARRL submission forms. How do I do this without first setting the submission field? This way I'll know what QSLs to gather up, what order to arrange them, and then which XMLog fields to set to Submitted.

From: Mike McAmis
Topic: 1583 Message: 1585

Hi Glen, When I'm ready to send a batch of cards to the ARRL for DXCC credit I find that the "Awards/DXCC/Critical QSO Summary" is the best guide for deciding which cards to submit. If this is your first submission this list can get out of hand since it will list all possible candidates for each band/mode you select to be listed. I sometimes save this report in a file and then edit it down to a more managable size and then print it. The "Awards/DXCC/Worked-Confirmed" report is also another good way to see what cards you need to send and it only shows a few candidates for each band/mode you choose.

1592. Re: [XMLog] Installing ver5.17

Yahoo group: XMLog
Date: 2005-12-27 16:47:04 UTC
From: Hadi Teichmann DJ2PJ
Topic: 1589 Message: 1592

OK, Jim, try the following:

(1) Create a new (temporary) folder. You may call it "tmp" if this name does not already exist. Should it exist, choose another name, maybe "xxx".

(2) Unzip xmlog517.zip with WINZIP, FILZIP or similar software (which one do you normally use?). Be sure to mark all 11 files, and extract them into the tmp-folder.

(3) In the tmp-folder (there should be 11 files now), double-click on setup.exe to finally install the program into the xmlog-folder. If xmlog contains an older version of XMLOG, which seems to be the case, do not worry. The installation should work without difficulty (and error message) as the disk space remains nearly the same. Most of the older files will only be replaced by the new ones.

If the same error message occurs, try the same with a new (empty) folder. Give it another name (xmlog517). Do not delete or change anything in the old folder containing version 5.16. For safety reasons make a backup of your log-file (extension .log) and of the complete backup-subdirectory anyway.

Another attempt would be deinstalling the old version completely and making a completely new installation of XMLOG. Be sure to save all configuration and log-files before you de-install or delete anything!!! If you are not sure which files to backup, let me know.

Remote diagnosis is always very difficult and, maybe, dubious. I do not know your system configuration and how much you know about computers and computer systems. This very often leeds to carrying coal to Newcastle (or owls to Athens). Please forgive me for this sort of ignorance; I'm only trying to help.

Please let me know about the results.

73 Hadi DJ2PJ

PS Do you use anything like NORTON System Works?

1593. RE: [XMLog] Installing ver5.17

Yahoo group: XMLog
Date: 2005-12-27 21:18:43 UTC
From: Jim Henry
Topic: 1589 Message: 1593

Hi Hadi

Tried all your suggestions but get same error message. Looks like I have a corrupt file in my system and I may have no option but to re-install windows. That will keep me busy.....these computers are great until something like this happens.

Many thanks for your help.

Subject: Re: [XMLog] Installing ver5.17

OK, Jim, try the following:

(1) Create a new (temporary) folder. You may call it "tmp" if this name does not already exist. Should it exist, choose another name, maybe "xxx".

(2) Unzip xmlog517.zip with WINZIP, FILZIP or similar software (which one do you normally use?). Be sure to mark all 11 files, and extract them into the tmp-folder.

(3) In the tmp-folder (there should be 11 files now), double-click on setup.exe to finally install the program into the xmlog-folder. If xmlog contains an older version of XMLOG, which seems to be the case, do not worry. The installation should work without difficulty (and error message) as the disk space remains nearly the same. Most of the older files will only be replaced by the new ones.

If the same error message occurs, try the same with a new (empty) folder. Give it another name (xmlog517). Do not delete or change anything in the old folder containing version 5.16. For safety reasons make a backup of your log-file (extension .log) and of the complete backup-subdirectory anyway.

Another attempt would be deinstalling the old version completely and making a completely new installation of XMLOG. Be sure to save all configuration and log-files before you de-install or delete anything!!! If you are not sure which files to backup, let me know.

Remote diagnosis is always very difficult and, maybe, dubious. I do not know your system configuration and how much you know about computers and computer systems. This very often leeds to carrying coal to Newcastle (or owls to Athens). Please forgive me for this sort of ignorance; I'm only trying to help.

Please let me know about the results.

73 Hadi DJ2PJ

PS Do you use anything like NORTON System Works?

I have had a similar problem with versions above 5.0 on my Windows 2000 laptop. The earlier versions (4.xx) installed OK. I have been installing the updates on a second computer running XP with no problems, then I copy the files over to the Win2K machine via the network. If you have another computer around, you might try this. If you don't have a network, you could use Sneaker Net (a floppy disk) to move the files over.

Good luck,

1599. Creating Excel Report

Yahoo group: XMLog
Date: 2005-12-29 00:24:36 UTC
From: mefazamy
Topic: 1599 Message: 1599

When I attempt to create an Excel Report from the display menu I get:
"Problem creating Excel Report, can't start Excel (429) ActiveX
component can't create object."

I use Office 1997, Xmlog 4.96 and a new computer which had a 60 day
free trial of Office 2003, including Excel, that I didn't want to
buy. It attempts to load the report but asks for a serial number that
I don't have. I have since removed the free trial Office 2003.

When I used Office 1997 with my old computer I was able to create the
Excel report.

Can I overcome this difficulty?

Evan

1601. Install Problems - Time for a new installer?

Yahoo group: XMLog
Date: 2005-12-29 15:57:00 UTC
From: Mike McAmis
Topic: 1601 Message: 1601

Errors reported while installing XMLog have been a recurring problem for years, I get an email on this subject every month or two. Unfortunately there often isn't much I can do since since the problem tends to be unique in each case and can't be duplicated here.

XMLog uses the installer supplied with Visual Studio (Version 6, SP6) which hasn't changed much since the days of Windows 95. I've often wondered if a more "modern" installer would reduce or eliminate these problems.

Unfortunately buying something like InstallShield goes far beyond my budget for XMLog but I recently received an email suggesting that I ask around to see if someone out there could donate to the cause and provide a copy of InstallShield or whatever...

Thanks, Mike - W1ECT

Mike-
Let this be my donation to the cause. Use Inno Setup. I personally
know of two 50+ million dollar companies that use this free installer
because it works so well and it's easy to use.

Figured out a way to get an Excel Report which is much different from
what I've been used to.

Had to open xmLog. Choose field displays. Minimize xmLog. Open
Excel and wait for the report.

In the past, all I had to do was open Display menu, click on Excel,
and the report would be displayed on Excel.

Topic: 1609 Message: 1610

You cannot share a comm port between two programs, so for the software, I would say yes. However, your rig probably only has one serial port. I use several programs with my rig (Kenwood TS-2000), XMLog, Writelog and SatPC32, they are all set for the same comm port, but I can only run one program at a time.

It would be nice to be able to share the rig and the comm port between multiple programs. For example run the satellite tracking program with Doppler correction and also the logging program at the same time. I think that there is some sort of protocol for a "software comm port" that can connect to the hardware comm port and be connected to by multiple programs, but I don't know if any other programs support it or if anything exists in the freeware area.

Hi - You need to pick a DX Cluster that's accessed as a "Telnet"
site. The site you were using is designed to be accesed from your
browser (Internet Explorer, etc). Here's a couple of sites you can
browse to pick an address from the Telnet DX Clusters out there:

http://www.contesting.info/index.php?page=packets

http://www.dailydx.com/telnet2.html

Note that these sites come and go so not all the Clusters in the list
will be available.

From: Hadi Teichmann
Topic: 1622 Message: 1622

Hi:

To be compatible with DF3CB's very good BV7 label-printing program, it would be wishful to have the mode-field in XMLog-created adi-files extended to 8 (instead of 6) alphanumeric signs. Bernd, DF3CB, was kind enough to insert two more modes in his label-program: Olivia (6 signs, no problem) and DominoEX (8 signs, not compatible with XMLog).

At the moment, I have to edit all DominoEX-QSOs manually after transformation into adi-files before converting them to bv7-files.

Thanks for assistance

Date: 2006-01-16 22:26:56 UTC
From: Mike McAmis
Topic: 1622 Message: 1624

Hi Hadi - Unfortunately the Visual Studio runtime doesn't allow me to increase the size of fields in existing databases. This makes it difficult to implement changes in log fields - A new log file must be created with the updated field and then the data has to be copied over from the old log. I'll put this on the list of things to do but it won't happen anytime in the near future...

1626. LoTW Support

Yahoo group: XMLog
Date: 2006-01-18 16:01:21 UTC
From: Craig Bradley
Topic: 1626 Message: 1626

Mike,

As the ARRL Logbook of The World now supports WAS (preliminary support up yesterday), do you have any more thoughts on LoTW QSL tracking in XMLog?

One simple (I think) interim solution would be to allow the the QSL fields to be set to "LoTW" in addition to "?" and a date. Other more elegant solutions might involve other fields, importing of LoTW QSLs and flagging LoTW QSLs on reports.

Now that WAS tracking is operational on LoTW, I would encourage everyone to download their logs to the web site. This is easy with XMLog, just export the log in ADIF format, sign it with the ARRL software and upload it to the web site. Once you are setup, this only take a few minutes. I upload mine about once a month and after every contest. You might be surprised to find out how many countries and states you have confirmed. I have a few countries confirmed on LoTW that I have not received QSL cards from yet.

1627. Integrating XMLog with Multipsk

Yahoo group: XMLog
Date: 2006-01-19 20:31:34 UTC
From: waltw1
Topic: 1627 Message: 1627

Hi, Guys;

Ive been using DXKeeper as my integrated logging program in Multipsk, for quite a while now, but have just begun experimenting with XMLog, which I really like. In fact, if I could integrate it into Multipsk today, I would. It seems to me that WXLogbook can be used with Multipsk because it fools the program into thinking that it is DXKeeper. Does anyone know if this can be done with XMLog? Or other logging programs?

XMLog is pretty user friendly and has an excellent QSL label printing function. Right now, I am using the Multipsk log and exporting it as an adif file into XMLog. Then I use XMLog to print my labels.

Thanks.

Topic: 1626 Message: 1628

Hi Craig,

> As the ARRL Logbook of The World now supports WAS (preliminary
> support up yesterday), do you have any more thoughts on LoTW
> QSL tracking in XMLog?

I'm surprised that the ARRL decided to use LOTW for WAS since as part of my implementing LOTW support for XMLog I added a report that checks the LOTW data against the data in the local log records and found that over 30% of the state values in the LOTW info did not agree with the info in the log records. Since 99% of the state info in my log is from contest exchanges I assume that the log data is ok and the LoTW info is incorrect. For the most part this seems to be due to folk submitting their full logs to LoTW as though they made every QSO from their current location. I can understand why this happens since it's a pain to break up your log data by QTH and then make individual LoTW submissions for each QTH. I guess the ARRL probably decided that it just didn't care that much - after all you're supposed to make all your QSO's from a single location (within 50 miles) and they don't verify that either.

> One simple (I think) interim solution would be to allow the the
> QSL fields to be set to "LoTW" in addition to "?" and a date.
> Other more elegant solutions might involve other fields, importing
> of LoTW QSLs and flagging LoTW QSLs on reports.

One of the things that had been keeping me from making a commitment to LoTW support was the question what new fields might be needed. I really wasn't too excited about adding separate LoTW date fields or perhaps adding a "QSL Source" field. In some test versions I just added "LoTW" to the "QSL via" field when doing an LOTW import. The idea of allowing LoTW as a legal value is appealing since no new fields are required (and the actual "received" date isn't that meaningful for LoTW anyhow). I'll check in to this scheme...

Another thing that I'm curious about is how the ARRL handles DXCC submissions when you set the "I have submitted an application via LoTW" option. Has anyone tried this yet? Do you get any indication that shows which LoTW QSOs were used to boost your DXCC totals?

My most recent attempt at adding LoTW support provides three new menu items:

1 - Import/Download LoTW data. This menu item allows you to download all your LoTW data or optionally all data after a specified date. A report is then produced that compares all the downloaded LoTW data against the data in your log - any Zone, State,

Country, ..., discrepancies are reported.

2 - Import/Check LoTW Data. This menu item produces the report as described above for any downloaded LoTW file.

3 - Apply LoTW Data to Log. This menu item set the "QSL Received" date to the current date and added "LoTW" to the "QSL Via" field. It seems that just setting the "QSL Received" to "LoTW" would be a simpler way to handle this. I suppose that if the date were already set then it shouldn't be overwritten since this would probably mean that you had an actual QSL card on hand. In any scheme like this handling cards from multiple sources is a pain (I just don't like the idea of multiple date fields).

An implementation problem I'm having concerns section 1 above, the Visual Studio runtime doesn't allow me to do the download in "asynchronous" mode and as a result XMLog hangs during the connection/download. One solution is to use one of several third-party Internet support packages available but since they typically cost $100-$150 this is another item that has been delaying LoTW support for XMLog.

From: Mike McAmis
Topic: 1627 Message: 1629

Hi Walt, Currently the only interface to the outside world that XMLog supports is the one you're using - ADIF. I have looked into providing some kind of programmatic interface but since each PSK/RTTY/etc program tends to support a unique interface the idea hasn't gone anywhere. Hopefully someday some sort of interface standard will emerge to make things easier, we can only hope.

1630. RE: [XMLog] Re: LoTW Support

Yahoo group: XMLog
Date: 2006-01-22 21:18:09 UTC
From: Craig Bradley
Topic: 1626 Message: 1630

Hi Mike,

Thanks for looking into this. I have not made any submissions using LoTW yet, so I can't help there. I do have several QSLs via both cards and LoTW, so it would be nice to be able to track this. When I submit for these QSOs, I would like to use the LoTW credit and only have the remaining cards checked to simplify things. I would like to be able to track both though. A QSL source field would be nice, but I understand the problems involved with adding new fields to a data base :(

How about using LoTW in the QSL Rcvd field and if a date exists, replace it and append the date to the QSL Via or Notes field such as "QSL card: xx/xx/xx" or something like that?

Regarding the WAS records, it will be interesting to see how this works out. I think they should get ride of the 50 mile rule anyway and just require that all of the QSOs be in the same state. This would be more inline with DXCC rules which used to be similar to WAS at one time. As they haven't provided the ability to use the WAS credits yet, this may be a learning experience...

For those of us that frequently operate portable, as simple way of storing a few different QTHs with separate default (power lever, etc.) would also be nice. I frequently operate at a second home and I have to edit all of the QTH data if I want to be accurate for WAS.

Thanks for looking into this and also for fixing the installer!

Just on this issue, you should also include eQSL confirmations.
Because of the way XMLog currently handles confirmations I keep
seperate logs to track them. My main log only has confirmations for
paper cards, and I have two completely seperate ones into which I
import the confirmations for eQSL and LOTW.

1633. Multiple packet connections

Yahoo group: XMLog
Date: 2006-01-31 15:35:14 UTC
From: Craig Bradley
Topic: 1626 Message: 1633

Mike,

I have downloaded version 5.19 and it has fixed a strange problem with my TS-2000. When I used to click on a DX spot in a different band and then just band switch back, the rig would be on a different frequency than it was before. Now it returns to the same frequency that it was on the last time it was on that band. Minor problem, but good fix.

Lately, I have had several disconnection and experienced down time on packet servers. Would it be possible to have a drop down list of connections in the Connect/Internet Connect window in some future version? You could even pre-populate it with your favorite nodes...

Thanks again for a great program!

73,
- Craig, AE6RR

Hi Mike. I too would like to see a drop down box for
Internet connections. Particularly if I could
populate it myself with my own list of clusters. Even
though clusters come and go, perhaps the list could be
initially be populated with some of the more common
ones like DX Summit or Ve7cc.

Yes, that was my thought too that it could be "pre-populated" and it would remember the last few entered. By the way Don, you cannot use DX Summit as it is a web page. Having the list pre-populated would make it much easier for new users to get going as launching the window would get them a connection "out of the box".

Any pre-populated list should include some European or even UK
clusters, most of us over here prefer these to the US ones as the
traffic is a little more relevant this side of the pond.

Dave in today's packet-cluster world 99% of all nodes carry the same traffic. It is up to you, the user, to tell the cluster what info you want to see and don't want to see. If you were to look at the complete packet-cluster user list you would see stations from Europe connected in the US, you would see US station connected all over Europe and Asia etc.
The only reason to connect to a localized cluster is for local 'chit chatting' with your mates.

1640. Re: Cluster Drop Down Box - was Re: [XMLog] Multiple packet connections

Yahoo group: XMLog
Date: 2006-02-02 05:11:29 UTC
From: N7MAL
Topic: 1626 Message: 1640

I am using ver 5.17. The way to get choices in the connect menu option is to create .NOD files for the nodes you want to connect to.
For Example here is a .NOD file for a node I regularly connect to. The node is N7OD and the file is called N7OD.NOD:

```
rem
rem Internet AR-PacketCluster at N7OD
rem
connect n7od.pentux.net
match call:
send #me
```

When you create these files they should/must be put in the same directory as XMLog. I think this is covered in the help files because I'm not usually smart enough to figure it out on my own.

Now for many reasons I don't want to go into here I connect XMLog directly to VE7CC terminal software with a file called NETWORK.NOD This way I can all the feature of a full function packet cluster terminal program and all the benefits of XMLog. (I can have my cake and eat it to)
Here is that file:

```
rem
rem Internet AR-PacketCluster at network network
rem
connect 127.0.0.1:7300
```

As I mentioned all this, I think, is covered in the help files.

Thanks Mal,

I checked it out. I was clicking on the Connect/Internet Connect menu, not the Connect/Start Nod File menu selection. I see that there are already some setup in the defaults. You also have to select Options/Packet Options and Port Select, go to the Port tab and put the name of the nod file in the box to autoconnect using the nod file, which gives you auto login on the packet.

You can learn something every day!

1643. Cluster Drop Down Box - was Re: [XMLog] Multiple packet connections

Yahoo group: XMLog
Date: 2006-02-02 16:17:22 UTC
From: Mike McAmis
Topic: 1626 Message: 1643

Hi Folks, We haven't had such an outpouring of messages in quite a while. As everyone knows now there are two menu items that can be used to make an internet connection; "Connect/Start Node File" (F5) and "Connect/Internet Connect". Node files take a bit of work to create but wind up being easier to use since the last node file selected is "remembered" and also you can set up the node file so that you don't have to type your callsign after the connect completes.

I've gone ahead and added a 10-item "memory" for the "Connect/Internet Connect" menu item and this feature will be available in version 5.20, it will also default to the last address selected. I decided not to pre-populate this memory with addresses since they change so often.

By the way, you can also supply a node file name as the address for the "Connect/Internet Connect" menu item and as the default internet address in the Options/Packet Port setup (but you must include the .nod extension along with the file name, e.g. xxx.nod).

1644. New "official" version - 5.19

Yahoo group: XMLog
Date: 2006-02-22 17:25:44 UTC
From: Mike McAmis
Topic: 1644 Message: 1644

Hi, I've just made version 5.19 the "official" version available at www.xmlog.com. This version has been in beta test for quite a while and hasn't had any problems. The biggest changes since the last official version (4.96) is the updated installer and support for the Station Info fields.

1647. Printing QSL labels on Avery 5260 label stock

Yahoo group: XMLog
Date: 2006-02-23 03:34:15 UTC
From: waltw1
Topic: 1647 Message: 1647

Hello ..... from Atlanta;

I need some help. I recently downloaded version 5.19 and installed it after removing 4.96 first. Now when I select Avery 5260 from the library during the qsl label set-up, the program will not remember my selection. I click on "save" after configuring all the other choices, but xmlog does not "remember my label choice when I reopen the program for my next session. It worked fine with version 4.96. Does anyone know what I might be doing wrong? I'd appreciate any help I can get.

Walt in Atlanta KJ4HE

1648. Re: Printing QSL labels on Avery 5260 label stock

Yahoo group: XMLog
Date: 2006-02-24 17:00:20 UTC
From: Mike McAmis
Topic: 1647 Message: 1648

Hi Walt, I tried it here and didn't have any problems. The name "Avery 5260" is not preserved but the values are saved and reloaded correctly. Could you give it another try? Perhaps you updated the Mailing Label settings instead of the QSL Label settings?

Mike - W1ECT

1649. Label help please

Yahoo group: XMLog

From: Gary Stone
Topic: 1649 Message: 1649

Hi,

I hope one of you have already done what I seek or willing to try. I am not very good at this sort of thing. My goal is to use my Dymo label maker. I do use it now but can't seem to get it to work right with multiple qsos on a label. I have tried the demo labels with multiple qsos and get mixed results.

Has someone designed some labels using the Dymo label maker. I tried modifying some of the demo labels and got lost somewhere in the process. I am using Dymo labels that are 1 4/10 x 3 1/2 (cm: 2.8 x 8.9). I would love to have a 3 and a 4 (or even a 5 qso label). Any help appreciated.

1651. Selecting a range of QSOs for export.

Yahoo group: XMLog
Date: 2006-03-01 15:53:16 UTC
From: Richard V. Haire
Topic: 1651 Message: 1651

Hi,
I'm enjoying XMLog but have not been able to find out how to select a
range of QSOs for
export (or display). I want to create an ADIF file of QSOs between
1/17/06 and 2/28/06.
I'd appreciate some help in this. Using 5.19.
Dick

From: Mike McAmis
Topic: 1651 Message: 1652

Hi Dick, You can select a subset of your log records by supplying a date range. For example to select all records in 2005 do a log search with >=1/1/05,<=12/31/05 as the date key.

Check the "Search Keys" section of the help file for more info.

> Dick W3LD

Click on 'select', type '>1/17/6,<2/28/6' (without inverted commas)
in the date box then 'search'.

Then 'Import/Export ADIF File' and choose 'currently selected log
entries'. Done.

1655. DXCC Submission Form

Yahoo group: XMLog
Date: 2006-03-02 06:54:46 UTC
From: Craig Bradley
Topic: 1655 Message: 1655

Mike,

I believe that the DXCC Submission Form has a problem. If you have cards with more than one QSO, it lists those cards at the end (as it should), but it also puts them in the sections above for the respective bands (should not). The ARRL web site FAQs state that the reason for this is to facilitate data entry from cards. If the multiple QSO cards are at the end, when the data entry person comes to the listing in the band area, there will not be a card in the stack in that spot. See:
http://www.arrl.org/awards/dxcc/faq/#_Toc94949177

From: Craig Bradley
Topic: 1655 Message: 1657

Hi Mike,

Thanks for checking this out. I decided not to submit the other bands on the multiple QSO cards, that cleaned up the report.

I submitted my LoTW QSOs first, then marked them all as Submitted and Accepted, then I ran a submission tracking report and marked the the QSO that I had cards for as Submitted. Then I was able to run a Submission form that listed the cards to be submitted. I had the cards checked this morning and all were approved. Now I just have to wait for the certificate.

73,

1658. Alarms when not wanted

Yahoo group: XMLog
Date: 2006-03-06 18:00:28 UTC
From: Dennis Jacobson
Topic: 1658 Message: 1658

Here is the settings I have set in the Packet Cluster Alerts:

IGNORE SPOTS OPTIONS

BANDS 160M 80M 6M X ENABLE VOICE ALERTS

ALLOW SPOTS FROM: INHIBIT ALERTS FOR

W6 W7 X NEW BANDS OR MODES
X STATUS = WORKED
X STATUS = OUTSTANDING

Now the problem. I still get alerts for new bands and modes.
I can not understand why I would get these when I have the
Inhibit alerts for set for not receiving alerts.

Can anyone tell me where I'm going wrong. Something is not
correct and apparently I'm too dense to see it.

Any suggestions?

Thanks
Dennis N6NG

1659. Problem downloading cityand street address from QRZ.com

Yahoo group: XMLog
Date: 2006-03-07 01:04:44 UTC
From: Kenneth Moorman
Topic: 1659 Message: 1659

Hi,

I just joined the list after downloading the latest (5.19) version of XMLog. I am totally new at this computer logging, but I sure do like the idea and would like to start using it. In playing around, trying to become familiar with the software, I can create a new logbook file, add an entry, give it the current date and time ok, give it a valid callsign, hit "Add" and watch it go to QRZ.com, the callbook I set it up to use, and the correct name, state, and county fields are automatically filled in. However, the city and street address fields are left empty. I can go to these fields and double click, or right click and select fill from callbook or whatever it says that means that, and nothing further occurs.
So, is this normal operation, or have I overlooked the most obvious thing in the universe that is keeping this from doing all its job? Any help will surely be appreciated.

73,

Ken, NU4I

??????????
I also use 5.19 and QRZ.COM.
I just went through the motions of adding a QSO with you-- attached is a
Word document containing a screen shot of the results. (That'll probably be
stripped from the version that gets on the reflector.)

I don't know what could cause the symptoms you describe-- sorry.

From: Craig Bradley
Topic: 1659 Message: 1661

Be sure that "Get info from call book" is selected in the Edit Defaults for
new entries item in the Edit menu.
Also, try some other call letters to be sure that the entry in QRZ.com is
correct. The US entries should be correct as they are downloaded from the
FCC database by QRZ.com. This function works OK for me.

I hope this helps,

1662. Re: [XMLog] Problem downloading cityand street address from QRZ.com

Yahoo group: XMLog
Date: 2006-03-08 14:39:43 UTC
From: Kenneth Moorman
Topic: 1659 Message: 1662

Thanks for the comments. I have figured out that I had not set up the address fields in the "Options" tab to be "always shown", and it did not give me a button to bring them in on demand. Seeing the screen shot gave the obvious clue.

From: GerryC
Topic: 1659 Message: 1663

Hi Ken-- Glad the screenshot helped!

KM>...In playing around, trying to become familiar with the software, I can create a new logbook file, add an entry, give it the current date and time ok...

You can have the current date and time filled in automatically.
Pull down the Edit menu, click Edit Defaults for New Entries, and check the appropriate boxes.
Then, back on the Edit menu, check Use Defaults for New Entries

From: John P Smith
Topic: 1665 Message: 1665

Anyone know if one can add a comment when using SHIFT F1 to post the station you just worked? For example I just logged 6W/RW3TN on 7.025 I want my post to say when I hit SHIFT F1:

DX 7025 6W/RW3TN up 2

Hi John, If you have your message for Shift+F1 set up as something like:

DX #freq #him

then when you invoke the message it will appear in input area of the Packet Window and you can add a comment before hitting Return. Note that for this to work you shouldn't include a #cr at the end of your defined message.

You can set #him by single-clicking on a call in the Packet Window or by using the "Edit/Set #him" menu item. To define a message that uses the call from the last log entry you created use:

DX #freq #logcall

Similarly you can use #logfreq instead of #freq to get the frequency from your last log entry.

From: Dennis Jacobson
Topic: 1658 Message: 1669

Hello again Mike

Here is an example of getting an alarm when inhibiting as mentioned
in my previous note.

I had already worked TZ9A on 20M SSB. On the packet line I have
a + sign next to the 20 as well as Phone.

The station TZ9DEL was reported by a W6 on 10mhz. And I recieved
the audible voice announcement of the TZ station.

Again I have Enable voice alerts checked as well as
inhibit for new bands / modes
and allow spots from W6 W7.

Any suggestions why I got this alert?

Thanks
Dennis N6NG

1676. Sending CW from 5.19

Yahoo group: XMLog
Date: 2006-03-14 18:10:42 UTC
From: GerryC
Topic: 1676 Message: 1676

I upgraded from 4-point-something to 5.19. The packet setup looks different
and I no longer see how to send CW (keyboard, files, or canned messages).
The portion of the HELP file under CW SETUP starts off with

You can send CW from the Packet window or you can display a separate CW
Keyboard window by choosing View/Show CW Keyboard Window.

I have not been able to find that last-mentioned item.

Topic: 1658 Message: 1677

It turns out that there was a problem if more than one cluster alert
filter was set. I've just posted version 5.20 at www.xmlog.com/beta
which should fix this bug.

Subject: [XMLog] Sending CW from 5.19

I upgraded from 4-point-something to 5.19. The packet setup looks different
and I no longer see how to send CW (keyboard, files, or canned messages).
The portion of the HELP file under CW SETUP starts off with

You can send CW from the Packet window or you can display a separate CW
Keyboard window by choosing View/Show CW Keyboard Window.

I have not been able to find that last-mentioned item.

1681. Alarms when not wanted.

Yahoo group: XMLog
Date: 2006-03-15 00:31:42 UTC
From: Dennis Jacobson
Topic: 1681 Message: 1681

Here I am again...

I've loaded 5.20 and although I think the original problem has been resolved, I am now getting alarms for new countries (in this case A61M) being reported by a VE9DX. I have set only to allow reports from W6 and W7. So although the new country would be good if reported by a W6 or W7, it should not have been passed by the filter when reported by the VE9.

Just FYI Mike.

From: Mike McAmis
Topic: 1684 Message: 1685

Hi, Can you open the log using the "File/Open Old Log" menu item? If so you can just use the "Options/Log Fields..." menu item to set kc4ey.log to be your default log file and it will be opened when XMLog starts up. If you can't open the file using "File/Open" then let me know what kind of error messages you're getting.

1686. can't open log

Yahoo group: XMLog
Date: 2006-03-19 20:25:25 UTC
From: John Poindexter
Topic: 1686 Message: 1686

Hi all,

I can't get my log file to open since I moved the hard drive from one computer to another.

I get an error that states:

Can't open log c\ka4hwx.log
[429] ActiveX component can't create object

I reinstalled ActiveX manager and DirectX both and neither helped.

Any ideas?

XMLog has no way of knowing your buddy's lat-long. I believe it's telling
you the distance to the geographic center of his call area (call area 4??).

Yahoo group: XMLog
Date: 2006-03-20 18:47:28 UTC
From: Mike McAmis
Topic: 1687 Message: 1690

Hi, XMLog tries to get the location of the other guy from any local callbook you have configured - It can get it from QRZ.COM although this is generally not a good idea since it can cause XMLog to run very slowly. If you do have a local callbook installed XMLog will use any latitude/longitude info and if that info isn't available it will look for any state/province info and use the geographical center as the location. If you don't have a local callbook or it doesn't provide any location or state/province XMLog will use the geographical center of the associated call area (W1, W2, VE1, VE2, ...).

I have a local RAC callbook installed and it's fairly good at providing the location for US hams. I don't know where they get the latitude/longitude info - I'm guessing that they derive if from the zip code? Anyhow, I wind up getting fairly good bearing/distance values for US stations including local guys.

Have been using qrz.com, 800 contacts in log. No delays worth
mentioning (DSL). The only time it may slow me down (I don't do this)
would be if I called cq in a contest. The logging would be slow enough
then to cause problems.
Maybe at 2000 or more contacts the log will slow down, but for now I'm
enjoying the function.

Hi Mike,

If you don't mind, can you please answer a question for me. Can I get alarms for new countries to activate just on the basis of what I have worked, not necessarily the ones I have QSL's for? If I can, would you please tell me how to go about it? I would certainly appreciate a few pointers.

Thanks in advance and very 73.

Kevin :)

Hi Kevin, Normally you get alarms if the alert is for an un-confirmed country, mode, or band. You can use the Packet Window menu item "DX/Packet Cluster Alert Options" to inhibit alerts for new bands/modes, countries you've worked, or countries which have outstanding QSLs.

Thanks much Mike. That kind of confirms what I guessed and I appreciate it very much. I've been relying on filtering from the cluster but like that idea better.

Thanks again and very 73.

Kevin :)

From: Dennis Jacobson
Topic: 1681 Message: 1701

Hello again.

Here are the 4 that have made it through the filter in the last
week or so. Yes I did an update before tracking these.

I've also included my MLOG.INI file.

http://pages.sbcglobal.net/n6ng/test.txt

Like MAL it is not a big deal but I hope it helps.

1702. Install newer version

Yahoo group: XMLog
Date: 2006-03-31 00:03:12 UTC
From: johnmc
Topic: 1702 Message: 1702

Greetings,

Will the XMlog 5.19 version install over a 4.79 xmlog version?
Or can you point me to install instructions for previous users...

tnx de John

If you've customized LABELS.INI you'd better save a copy of it.

Ok and so sorry for being so dense Mike....

If I run the installer will it overwrite and install over the previous version?

I don't have to set up a new folder and transfer the old log into it?

Tnx de John

Always back up your directory whenever you install
anything!

It installs just fine right on top of the old stuff
and maintains your log and settings.

From: Mike McAmis
Topic: 1702 Message: 1707

Hi, Thanks for pointing out that labels.ini was being replaced. I've changed this for version 5.22 - this was the only .ini file that was not being preserved during an install of a new version of XMLog. I suspect that I thought that I would be making lots of updates to this file (the "layouts library") adding new label page layouts. As it turns out, this has not been the case. Anyhow, from version 5.22 on things will be consistent - any .ini file will be preserved and any .lst file may be replaced with a new version.

Mike - W1ECT

Topic: 1708 Message: 1708

I get the following message when I double click on a call to get the QRZ lookup: "QRZ.com request Can't send request to QRZ.com (40006) Wrong protocol or connection state for the requested transaction or request." The funny thing is the call is looked up and shows up OK. This does not happen all the time just most of the time. I am using ver 5.19 of XMlog and Windows XP professional. Also I get an audio alert "bong". Any ideas?

From: Craig Bradley
Topic: 1708 Message: 1714

I have occasionally seen this problem. I think that the QRZ.com web site does not respond and you get a timeout, then you get another request and it works. Maybe if you click more than once, you send more than one request?

Maybe there are some server problems at QRZ on like you say, it is getting overloaded.

My setup seams to work OK now.

1716. Cabrillo?

Yahoo group: XMLog
Date: 2006-05-08 16:03:26 UTC
From: Puck Motley W4PM
Topic: 1716 Message: 1716

Is there any way to export a Cabrillo format file from XMLOG or is such a thing planned for future updates?
Puck, W4PM

1717. Re: Cabrillo?

Yahoo group: XMLog
Date: 2006-05-10 19:20:15 UTC
From: Mike McAmis
Topic: 1716 Message: 1717

Hi Puck, Since XMLog isn't meant to be a contesting program I haven't added support for creating Cabrillo format files. Most XMLog users (myself included) use a program like WriteLog, N1MM, etc. to do their contest logging, create the Cabrillo file, and then import the contest QSOs into XMLog using ADIF files.

Topic: 1716 Message: 1718

I understand. Normally I use SD logger for contests but I dabbled in 4 different contests this past weekend and found it easier to just use XM log with identifiers for each contest in the notes field and sort them out at the end. Since I couldn't then write cabrillo files I just exported text files, massaged them a bit in a spread sheet program and printed out paper logs. For my small number of contacts (about 160 total) this worked OK.

Another thing I wish I could do is make changes to multiple entries in fields other than just prefix, date/time and station info. A routine to pick the field you need to change would be quite helpful. Perhaps there is a "work around" to do this but I've not found it yet.

Overall this is a great program and I've very much enjoyed using it. Perhaps one of these days I'll actually interface it to my rig and take advantage of more of its many features.

73,
Puck W4PM

OK Puck, Well now that I have optional "Contest In/Out" fields that
can be displayed perhaps it's time I reconsidered Cabrillo support.

1720. SH/DX COMBINATION

Yahoo group: XMLog
Date: 2006-05-11 18:37:16 UTC
From: Dennis Jacobson
Topic: 1720 Message: 1720

Hello all...

Here I am with another question.
I know how to do a "sh/dx on 20m" for example.
and I know how to do a "sh/dx by_zone 3" for example.

But how do I do a combination ie:

"sh/dx on 20m by_zone 3" ?
or
"sh/dx by_zone 3 on 20m" ?

Anyone know if this is possible and if so
how do I do it..????

Thanks all..
Dennis N6NG
XMLOG still the best general logging program around.

If you are using an ARC Cluster here is the link to the manual for advanced options. It was written by a computer 'geek' for computer 'geeks'. It takes a little trial & error to figure it out.
Good Luck

Hi Dennis, Assuming you are using a DXSpider node both should work.
During the recent VU4 activity I was using commands like:

sh/dx on 20m by_zone 3,4,5 vu4*

or

sh/dx by_zone 3,4,5 on 20m vu4*

and they both worked fine. Don't know what the equilvalent commands
are for AR Cluster nodes.

Thanks Mike... Niether of those work on W6RFU that says it's
running DXSpider V1.51 build 58.317.

Don't know if it's an old build or if I have something set
wrong in the system here... I'll play with it and see if I can
find out what works.

Thanks again.

OK Dennis, I tried bunch of the DXSpider nodes listed at:

www.ng3k.com/Misc/cluster.html

and found that most handled the zone+band syntax fine but there was one other node that gave the same (bad) results that you're seeing on your node. You might want to send the sysop a note that he needs to check his config, or more likely, update to the current version. You might also just switch to another node...

1726. PACKET REVISITED

Yahoo group: XMLog
Date: 2006-05-24 20:43:54 UTC
From: N7MAL
Topic: 1726 Message: 1726

I wanted to re-visit the packet voice announcements. Last week when KH6ND/KH5 was active about every 4th time he was spotted I got a voice announcement. I don't need either KH6ND/KH5 or Palmyra. I've worked them both on multiple bands. A few minutes ago I got a voice announcement for a KP4. I have worked KP4 on all bands. I have turned off voice announcements because there is no major xpedition on the air at this time.
My plan is to download my LOTW file and start a new logbook file. The QSO count at the bottom left of the logbook page does not match the LOTW count. I have 2,000 more QSO's on LOTW than I have in the log. (Sometimes I upload contest logs to LOTW and forget to load them in the logbook..) Something may be corrupt in my log file so tonite I will start out fresh.
I'm open for any suggestions.

1727. RE: [XMLog] PACKET REVISITED

Yahoo group: XMLog
Date: 2006-05-25 02:53:35 UTC
From: Craig Bradley
Topic: 1726 Message: 1727

If you upload contest logs from a program such as WriteLog into LoTW and then import them into XMLog you may get duplicate entries in LoTW if you upload the log from XMLog. WriteLog logs the time in HH:MM:SS format and XMLog uses HH:MM, either rounding off the seconds or truncating them. When you upload to LoTW, the times are different and the Qs get entered a second time. If the times match exactly, LoTW will not create dupes. Look at your log in LoTW to see if the contest Qs got entered twice with times that end with :00 and :ss (ss is non-zero).

LoTW does not care about the duplicates and there is no way to remove them. I contacted the LoTW people about this because I ended up with a few hundred more QSOs in there than in XMLog. Chances are that your XMLog is not corrupted.

After this happened to me the first time, I stopped uploading the WriteLog files to LoTW. Now I import them into XMLog and then upload that file.

I hope that this helps.

From: N7MAL
Topic: 1726 Message: 1728

There was a lot digest there. First 99% of my contesting is with CT and has been since the mid/late 80's, (it was DOS only in those days). I use N1MM only if I can't 'jury-rig' CT. CT files are in HH:MM:SS. I have several times uploaded my logs to the contest sponsor and LOTW when a contest is over. I never imported it into XMLOG, it's a malfunction, with me, I need to get control of. Your system of uploading everything to LOTW only from XMLOG seems to be the best plan. My main interest today is getting a new starting point where everything matches.
I am more worried about corruption causing the random voice announcements even though there are plus marks to both band and mode in all the recent random voice announcements.

This was posted on one of the DX mailing lists:

As of June 1, 2006 ZK1 will change to new call E51 here in the Cook Islands . *
*I was just running out of ZK1 cards so this works out great for New cards printed.
Will try and be on June 1 with new Call sign E51CG and Later with E51USA from South Cooks

Regards
Victor Rivera ZK1CG / ZK1USA as of June 1 E51CG and E51USA
Po Box 618
Rarotonga Cook Islands
Via New Zealand

This is in the latest OPDX:

E51, COOK ISLANDS. Victor, ZK1CG/ZK1USA, reports that as of June 1st, (2006), the ZK1 prefix will change to a new prefix, E51. He will try and be on June 1st with his new callsign E51CG and later with E51USA from South Cooks.

Volume 10 Number 098

May 26, 2006

Editor/Publisher Bernie McClenny, W3UR

"ZK1CG, Victor Rivera, reports as of June 1, 2006 ZK1 stations will finally change to the new E51 prefix in the Cook Islands. On August 15, 2004 ITU Operational Bulletin No. 818 stated "Following a request from New Zealand, the International Call Sign Series E5A-E5Z, in accordance with the provisions of No. 19.33 of the Radio Regulations, has been provisionally allocated to New Zealand for exclusive use by the Cook Islands (formerly ZK1)." Don't forget to add the prefix E5 to you logging programs. Victor plans to be QRV with his new call E51CG on June 1st and later with E51USA."

1735. Re: New prefix for Cook Is.

Yahoo group: XMLog
Date: 2006-05-29 14:46:22 UTC
From: Mike McAmis
Topic: 1726 Message: 1735

OK - The way I normally handle this is to wait until the ARRL officially updates the "main prefix" in their countries list and then I do the same. At this point XMLog will automatically update the main prefixes for existing log entries.

I don't know if there is going to be any way to distinguish North Cook from South Cook by their new callsigns - previously XMLog assumed calls starting ZK1N were North Cook and ZK1S were South Cook. However since the suffix of most ZK1 calls didn't start with N or S XMLog couldn't guess the country from the callsign. This meant that whenever you saw a new ZK1 call mentioned in a DX bulletin somewhere you had to define the appropriate country for that callsign using the "View/Show Callsign List" menu item (this was "DX/Show Callsign List" in older XMLog versions).

I suppose we'll have the same problem with the new E51 calls. I can probably make the same assumption about the country for E51N... calls and E51S... calls so I'll make this change in the next XMLog release. If you want to make this change to your current version of XMLog here's how:

Go to your XMLog install folder (usually c:\mlog) and open the file Prefixes with a text editor like WordPad. Scroll down the the North Cook entry and on the next line change:

ZK1N,!,

to

ZK1N,E51N,!,

and change the line following the South Cook entry to:

ZK1S,E51S,!,

and don't forget the trailing comma. In practice this change probably won't help much since I suspect most E51 calls won't fall into the E51N/E51S category and we'll have to use "View/Show Callsign List" just like we did for ZK1 calls (and 3D2 calls, and, ...).

Hi Mike,

As the Cook Is. have the series E5A-E5Z, maybe they will be using E51 for S. Cook and another number (E52 ?) for North Cook? Note the range in this text from the Daily DX:

On August 15, 2004 ITU Operational Bulletin No. 818 stated "Following a request from New Zealand, the International Call Sign Series E5A-E5Z, in accordance with the provisions of No. 19.33 of the Radio Regulations, has been provisionally allocated to New Zealand for exclusive use by the Cook Islands (formerly ZK1)

1737. interfacing XMlog with Icom IC-7000

Yahoo group: XMLog
Date: 2006-05-30 09:26:59 UTC
From: Risto Kotalampi
Topic: 1737 Message: 1737

I am having trouble interfacing XMlog 5.22 with Icom IC-7000. Does anyone know what settings needs to be set to make it work? IC-7000 is not in directly supported radios but some programs can make it work just by setting to Icom 756ProIII and setting the right CI-V address.

I have tried almost any possible combination but still no luck. Has anyone been able to use XMlog with IC-7000?

73!

Risto, W6RK

In your Manual, on page 138 section 13,in the set mode, make sure you are set to the address 70h. Also make sure you are using address 70h in your XMlog program. This is the most important thing to check.

Thank you,

It's all there... it's nothing this trivial. It works fine on other
programs (N1MM/Writelog/HRD/MixW).

Hi Mike,
Concerning #1 above, why not just use an adif file that LOTW can
create for you. Yes, you have to manually create and download it
from the WEB, but I need to do it manually when I upload LoTW with
new entries anyway.
As for #3, an additional entry in QSL via or notes, maybe an
LoTW+Card is appropriate. I would also not touch the QSL sent date
and use it to flag hard cards sent as well.
Now this brings up another issue. If I have QSL received for LoTW
and send a hard card for other non-LoTW awards, do I sign the QSL
card as Tnx? No, I would want it to say PSE QSL or Tnx eQSL, PSE QSL
Card or something like that. I could probably write a custom label
or even write or stamp the request on the card.
Also, do you have a beta that will allow me to import my 2500+

LoTW QSL's? Doing it by hand is not an option!

Thanks for xmlog and your support,
Mike, W1NR

From: Mike McAmis
Topic: 1626 Message: 1742

Hi Mike - XMLog will be able to verify/load ADIF LOTW files that were downloaded outside of XMLog. I'm also looking into doing the upload for you as well but this probably won't be in the initial LOTW release. I do have a partially completed test version with the new screen layout and fields. I'm waiting to complete some other projects before I make this available for "pre-beta" evaluation.

From: Mike McAmis
Topic: 1737 Message: 1743

I'll add the IC-7000 to the next version. Since Icom uses the same basic commands for nearly all of their rigs this means that for now you can pick any Icom rig (except the IC-735 or IC-731) and override the normal rig address with a 70.

1744. Address labels

Yahoo group: XMLog
Date: 2006-06-03 17:58:08 UTC
From: Craig Bradley
Topic: 1744 Message: 1744

I have recently noticed that some 4-line address from QRZ.com get imported into XMLog ver. 5.19 as a 3-line label. The 3rd line ends up on the end of the 2nd line. This causes the mailing label to print off of the end of the label so that the address extends into the next label and messes up the QSL label.

I found this with GM3TAL and a few others.

Has anyone else seen this problem?

- Craig, AE6RR

1745. XMLog and IC718

Yahoo group: XMLog
Date: 2006-06-03 18:59:26 UTC
From: k2qmf@juno.com
Topic: 1745 Message: 1745

Hello All,

I have a new Icom IC 718 with the 500 Hz
CW filter installed and a computer interface.
I want to set it up for FD using XMLog.

I am having a strange problem:
when I select a CW packet spot the radio goes
to the frequency and the mode stays on CW however,
the narrow (500Hz) filter switches to wide and the CW-reverse
setting goes back to normal! I like using the rig in the CW-R
setting and I would like the narrow filter to stay selected.

This does not happen if I use Writelog to control the rig. It only
happens with XMLog. I would rather use XMLog if I can...

Any help or suggestions would be very much appreciated...

I would like to make a suggestion based on many years of experience. I use XMLOG as my day-to-day logging program and have for many years. (I have XMLOG tattooed on my,,,,). I am a very, very, active contester and would never consider using XMLOG for any contest including FD. You will be much better/happier using a dedicated contest program. Programs like Writelog, CT, N1MM are designed for easy contest contact entry and easy rig interfacing. CT and N1MM have easy CW interfaces and DVP interfaces. I've never used Writelog but assume because it is a contest logging program it has interfaces.
Additionally dedicated contest logging programs generate the forms necessary to submit to the contest sponsor. Dedicated contest programs will also generate an ADIF file you can import to your master log in XMLOG.
I will be N7MAL 1D AZ during FD, CW only.

Mal,

You are correct... However, I would still like
to have my IC-718 work correctly with XMLog.......

1749. Re: XMLog and IC718

Yahoo group: XMLog
Date: 2006-06-05 17:37:53 UTC
From: Mike McAmis
Topic: 1745 Message: 1749

Hi Ted - When you double-click on the spot XMLog just sends two commands, one to set the mode and one to set the frequency. Most rigs retain the last settings associated with the approriate mode selection (like the filter and cw reverse) but I guess the IC-718 doesn't. To do what you'd like XMLog would have to send commands to the rig to get the filter/reverse settings before setting to rig mode to CW and then restore the filter/reverse settings if they weren't set to the "default" settings.

Since this would be quite a large change I'd only consider it if it would be appropriate for most/all Icom radios. Maybe other Icom owners could let me know if the filter selection or CW reverse settings are lost when double-clicking on a cluster spot.

1750. Re: Address labels

Yahoo group: XMLog
Date: 2006-06-05 17:44:44 UTC
From: Mike McAmis
Topic: 1744 Message: 1750

Hi Craig - When I create a new log entry for GM3TAL and do a "Set Address from Callbook" I get a 4-line entry:

MJW HAMILTON
3 CHARLES COURT LIMEKILNS DUNFERMLINE
FIFE KY11 3LG
UK

When you then print a label it trys to put it on 3 lines? Which label layout are you using?

Mike - W1ECT

1751. RE: [XMLog] Re: Address labels

Yahoo group: XMLog
Date: 2006-06-06 04:33:09 UTC
From: Craig Bradley
Topic: 1744 Message: 1751

Hi Mike,

I went back to look at it again. I miss-stated the problem. It is a 4-line vs. 5-line entry.

If I have GM3TAL as the QSL manager (for VP2MMH) and double click it, I get the QRZ.com lookup window with the following:

MJW HAMILTON
3 CHARLES COURT LIMEKILNS

DUNFERMLINE
FIFE KY11 3LG
UK

When I click the Log (Copy address to log entry) button, I get the following in the QSO address windows:

MJW HAMILTON
3 CHARLES COURT LIMEKILNS DUNFERMLINE
FIFE KY11 3LG
UK

This entry overflows the address label on the second line. I am using the standard label.

However, when I go to QRZ.com and view the address, it is in the 4 line format as it is entered in the QSO window. It looks like the QRZ.com lookup window is wrapping the second line on the display. I guess that this is a false alarm. These long addresses are an occasional problem and mess up the labels.

Craig - AE6RR

Mike there is 'no joy' in mudville for the mighty XMLOG has struck out. I wanted to see how my Yaesu MKV handled this problem. The only time I ever use rig control is during a contest and then only to be sure I'm logging on the band I'm xmitting on.
I click on a CW packet spot and the MKV goes to the freq and uses the last selected filter. That's where the fun stops. I went back to listening to the DX window on 75 but my rig didn't change modes. I tried this several times and it is 100% repeatable. I clicked on a 17m spot, the rig went there just fine. I hit the 75m memory button and the rig went to 75m but stayed on CW. XMLOG changes the memory mode and the only way to correct it is to manually change the mode. I tried an SSB spot and it changed my CW memories to SSB. Whatever code you're sending to Yaesu MKV is confusing the radio.....(you do not have an option for MKV's only MP)
Just trying to keep you from being bored..:-)

1753. Station location setup

Yahoo group: XMLog
Date: 2006-06-09 14:24:15 UTC
From: Brian
Topic: 1753 Message: 1753

Hi there. Newbie here... well at least to XMLog.
I got some information from another yahoo group that I belong to, that XMLog was the computer logging program of choice among our users so I am giving it a chance.
The first thing that is going on is setting up my Station information. simply put... it wont! I am confused as to what information I really need. It asks for my Station call "KC9FAV"
Then Operator call "Brian"
Then Latitude I put in 41.146337
Long. -87.86369
I finish with the other information and I get an error. Latitude need to be 0 - 90. So I am thinking Well it IS 47.146.... and I don't get it. I then try Latitude 41'8'56.3 N and 87'51'54 W

Same response 0 - 90. I then lookup my call on Buckmasters and enter for Lat. 41d 8m 56s N and for Long. 87d 51m 54s W

Same response. So what am I doing wrong to keep getting these replies???

I cannot use it until the station setup is right. So I do need some help here please.

Thanks

Brian - KC9FAV

Far easier than Excel export (which incidently only works if you have
MS Excel installed, not with OpenOffice):

Select the QSOs you want to view.
Click on Display and select short/medium/long as you wish
Click on the 'printer' box then OK.

Done

73 Dave G3YMC

PS Some of us of course try to work as FEW of these World Cup
stations as possible....

1761. Re: Address labels

Yahoo group: XMLog
Date: 2006-06-13 16:35:33 UTC
From: Mike McAmis
Topic: 1744 Message: 1761

Hi Craig, The data for GM3TAL comes in from QRZ.COM as 4 lines with that long second line. It turns out that the "control" that "DX/Callbook Lookup (Ctrl+L)" uses for displaying this info automatically breaks up long lines into multiple lines - it's not something I do explicitly.
